PREFACE

PES College of Engineering, Mandya, started in the year 1962, has become autonomous institute in the academic year 2008-09. Since, then it has been doing the academics and assessment activities successfully. The college is running eight undergraduate and eight Postgraduate programs including MBA and MCA which are affiliated to VTU, Belagavi.

India has recently become a Permanent Member of the Washington Accord. The accord was signed by the National Board of Accreditation (NBA) on behalf of India on 13th June 2014. It enables not only the mobility of our degree globally but also establishes equivalence to our degrees with that of the member nations. The implementation of Outcome Based Education (OBE) has been the core issue for enabling the equivalence and of Indian degrees and their mobility across the various countries.

Our Higher Educational Institution has adopted the Choice Based Credit System (CBCS) based semester structure with OBE scheme and grading system. Which provides the flexibility in designing curriculum and assigning credits based on the course content and hours of teaching. There lies a shift in thinking, teaching and learning process moving towards Students Centric from Teachers Centric education which enhances the knowledge, skills & moral values of each student.

Choice Based Credit System (CBCS) provides the options for the students to select from the number of prescribed courses. The CBCS provides a 'cafeteria' type approach in which the students can Choose electives from a wide range of courses of their choice, learn at their own pace, undergo additional courses and acquire more than the required credits, adopt an interdisciplinary approach for learning which enables integration of concepts, theories, techniques. These are greatly enhances the skill/employability of students.

In order to increase the Industry/Corporate readiness, many Soft Skills, self learning components and Personality Development modules have been added to the existing curriculum. In order to enhance creativity and innovation Mini Project and Industrial visit & Interaction are made mandatory for all undergraduate programs.

Dr. Umesh D R
Deputy Dean (Academic)
Associate Professor,
Dept. of Computer Science & Engg.

Dr. P S Puttaswamy
Dean (Academic)
Professor,
Dept. of Electrical & Electronics Engg.

PES College of Engineering

Vision

"*A* leading institution imparting quality engineering and management education developing creative and socially responsible professionals"

Mission

Mission of P E S College of Engineering is to,

- Provide state of the art infrastructure, motivate the faculty to be proficient in their field of specialization and adopt best teaching-learning practices.
- Impart engineering and managerial skills through competent and committed faculty using outcome based educational curriculum.
- Inculcate professional ethics, leadership qualities and entrepreneurial skills to meet the societal needs.
- Promote research, product development and industry-institution interaction.

About the Department of Mechanical Engineering

The department of Mechanical Engineering was established in the year 1962 during the origination of the institute. The department was granted academic autonomy in the year 2009.
The department presently offers B.E in Mechanical Engineering, M Tech in Computer Integrated Manufacturing (CIM), M Tech in Machine Design, M.Sc., (Engg.) by research and research leading to Ph.D. The present intake capacity of the department is 120 for BE, 18 for M Tech CIM and 24 for M Tech Machine Design. The department has a faculty-student ratio of 1:15 for UG courses and 1:12 for PG courses. The department has well established laboratories to meet the academic requirements of UG and PG programmes and a skilled technical faculty to train the students. The department has its own library which has a collection of about 3861 reference books.
The department has been NBA accreditated for 3Years in 2017.
The department regularly organizes industrial visits, technical lectures by experts from industries and institutes in contemporary areas to bridge the gap between syllabi and current developments. The students are encouraged to undergo industrial training as well as to take up industry oriented projects during their academic course. Mechanical Engineering Association, formed by the students and faculty of the department regularly organizes cocurricular and extracurricular activities for the students.

Department Vision

"Be a department well recognized for its ability to develop competent mechanical engineers capable of working in global environment"

Department Mission

The Mission of the Department of Mechanical Engineering is to:

- Provide quality education by competent faculty.
- Provide adequate infrastructure and learning ambience for the development of essential technical skills.
- Inculcate a sense of higher education and research orientation.
- Foster industry interaction.

Program Educational Objectives (PEOs)

The Department of Mechanical Engineering has formulated the following programme educational objectives for the under-graduate program in Mechanical Engineering:

The Mechanical Engineering graduates will be able to:

PEO1: Use the fundamentals of basic science, mathematics and mechanical engineering, to pursue their career as engineers as well as to lead and manage teams in global organizations.

PEO2: Pursue advanced education, research and development and engage in the process of life-long learning.

PEO3: Become entrepreneurs in a responsible, professional and ethical manner to serve the society.

Program Outcomes (POs)

Engineering Graduates will be able to:

1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

$^{+}$ Common to BE (AU, CV, ME and I&PE)

$^{++}$ Common to BE (CS, EC, E&E and IS&E)

Semester:- III

Course Title: **Engineering Mathematics-III(Common to All Branches)**			
Course Code: **P17MA31**	Semester: III	L-T-P-H: 3-2-0-5	Credits: 04
Contact Period - Lecture: 52Hrs .; Exam: 3Hrs.		Weightage: CIE: 50 %;	SEE: 50%

Prerequisites: The student should have acquired the knowledge of Engineering Mathematics-I & II of I and II semester B.E.

Relevance of the Course:

Engineering Mathematics-III deals with the Numerical methods to solve interpolation and extrapolation problems in engineering field. In Fourier series analyze engineering problems arising in control theory and fluid flow phenomena using harmonic analysis

Analyze the engineering problems arising in signals and systems, digital signal processing using Fourier transform techniques. Z-transforms & Z-transforms of standard functions to solve the specific problems by using properties of Z-transforms. Identify and solve difference equations arising in engineering applications using inverse Z– transforms techniques

Partial Differential Equations (PDE's), order, degree and formation of PDE's and, to solve PDE's by various methods of solution. One- dimensional wave and heat equation and Laplace's equation and physical significance of their solutions to the problems selected from engineering field

Course Content

UNIT-I

Numerical Methods-I: Finite differences**:** Forward and Backward differences, Gregory- Newton forward and backward interpolation formulae, Newton's divided difference formula, Lagrange's interpolation formula and inverse interpolation formula. (All formulae without proof) – Problems only Central differences: Gauss Forward and Backward difference formulae, Sterling's, and Bessel's formulae (All formulae without proof) – problems. **10 Hrs**

Self-Study Component: Problems using Everett's formula in Central differences

UNIT-II

Numerical differentiation using Newton's forward and backward interpolation formulae, Newton's divided difference formula and Sterling's formula (All formulae without proof)-problems only and Applications to Maxima and Minima of a tabulated function.

Numerical integration: Newton- Cotes quadrature formula, Trapezoidal rule, Simpson's $(\frac{1}{3})^{rd}$ rule, Simpson's $(\frac{3}{8})^{th}$ rule, Boole's rule and Weddle's rule (All rules without proof)- Illustrative problems. **10 Hrs**

Self-Study Component: Derive Newton- Cotes quadrature formula.

UNIT-III

Fourier series: Periodic functions, Fourier series- Euler's formula, Dirichlet's conditions. Fourier series of discontinuous functions, Fourier series of even and odd functions. Change of interval-Fourier series of functions of arbitrary period. Half–range Fourier series expansions, Fourier series in complex form, Practical harmonic analysis- Illustrative examples from engineering field. **11 Hrs**

Self-Study Component: Derivations of Euler's formulae

UNIT-IV

Fourier Transforms: Infinite Fourier transforms-properties. Fourier sine and Fourier cosine transforms, properties. Inverse infinite Fourier and inverse Fourier sine & cosine transforms – Illustrative examples.

Difference equations and Z-transforms: Definition of Z-transforms- standard Z-transforms, linearity property, damping rule, shifting rules, initial value theorem and final value theorem (All rules and theorems without proof). Inverse Z – transforms. Difference equations- basic definitions. Application of Z-transforms to solve difference equations. **10 Hrs**

Self-Study Component: Convolution theorem, Parseval's identities.related problems.

UNIT-V

Partial differential equations (PDE's):

Formation of PDE's. Solution of non-homogeneous PDE by direct integration. Solutions of homogeneous PDE involving derivative with respect to one independent variable only (both types with given set of conditions). Method of separation of variables (first and second order equations). Solution of the Lagrange's linear PDE's of the type: $Pp + Qq = R$.

Applications of PDE's:

One- dimensional wave and heat equations (No derivation), and various possible solutions of these by the method of separation of variables. D'Alembert's solution of wave equation. Two dimensional Laplace's equation (No derivation)–various possible solutions. Solution of all these equations with specified boundary conditions (Boundary value problems). Illustrative examples from engineering field. **11 Hrs**

Self-Study Component: Finding the solution of non-linear equations of first order: Charpit's Method - simple problem.

Text Books

1. Higher Engineering Mathematics: B.S. Grewal, Khanna Publishers, New Delhi, 42nd Ed.2012.
2. Advanced Engineering Mathematics: - E. Kreyszig, John Wiley & Sons, 6th Ed.2007.

Reference Books

1. Advanced Modern Engineering Mathematics: - Glyn James, Pearson Education Ltd., 3rd Ed., 2007.
2. Advanced Engineering Mathematics: Peter V O' Neil Thomson, Brooks/Cole, 5th edition, 2007.
3. Higher Engineering Mathematics: - B.V. RAMANA, McGraw Hill Education, 2007

Note: - Each unit contains ***two*** full questions of ***20 marks*** each. Students are required to Answer ***five*** full questions choosing at least ***one*** question from each unit.

Course Outcomes

After learning all the units of the course, the student is able to;

1. Apply forward, backward difference formulae and central differences formulae in solving interpolation- extrapolation problems in engineering field.
2. Apply Numerical differentiation and integration rules in solving engineering where the handling of numerical methods is inevitable.
3. Recognize the importance of Fourier series & Fourier transforms, difference equations and Z-transforms in the field of signals and systems, communication and network theory signal and image processing, control theory, flow & heat transfer and theory of elasticity.
4. Learn modeling in terms of partial differential equations and also, learn different exact/analytical methods of solving with special emphasis on interpretation of the solution.
5. Interpret the solution of one-dimensional wave, heat and Laplace equations with given initial and boundary conditions in the context of various engineering and technological applications.

Contact Period - Lecture: 52Hrs. Exam: 3Hrs		Weightage: CIE: 50 %;	SEE: 50%

Course Objectives:

This course aims to facilitate the students to acquire basic knowledge about lattice arrangement of atoms in materials, their mechanical behavior, properties, characterization, different advanced heat treatment processes and phase diagrams. Finally it helps students to expose to information on corrosion, non ferrous materials and environmental issues.

Course Content

UNIT-I

Structure of Crystalline Solids: Fundamental concepts of unit cell, space lattice, Bravaias lattice, Unit cells for cubic structure and HCP, study of stacking of layers of atoms in cubic structures and HCP, Calculation of radius, co-ordination number and atomic packing factors for different cubic structures. Crystal imperfections - point, line, surface and volume defects. Diffusion Mechanisms and Fick's laws of diffusion. **11 Hrs**

Self study component: Difference between Amorphous and crystalline solids

UNIT-II

Mechanical characteristics of metals: Tensile properties, true stress and true strain, Hardness, Rockwell, Vickers and Brinell hardness testing, plastic deformation - slip and twinning. Fracture type, stages in Cup & Cone fracture, fracture toughness, Griffith's criterion. Fatigue test, S-N curves, factors affecting fatigue life and protection methods. The creep curves, Mechanism of creep. **10 Hrs**

Self study component: Creep resistant materials

UNIT-III

Solid Solution and Phase Diagrams: Solid solutions, Rules governing formation of solid solutions, Phase diagram- Basic terms, phase rule, cooling curves, construction of Phase diagrams, interpretation of equilibrium diagrams, Types of Phase diagrams, Lever rule.

Iron Carbon Equilibrium Diagram: Phases in the Fe-C system, invariant reactions, critical temperatures, Microstructures of slowly cooled steels, effect of alloying elements on the Fe-C diagram, ferrite and austenite stabilizers. The TTT diagram, drawing of TTT diagram, TTT diagram for hypo & hyper eutectoid steels. **11 Hrs**

Self study component: Effect of alloying elements on CCT diagram

UNIT-IV

Heat Treatment: Annealing and its types, normalizing, Hardening, tempering, martempering, austempering, surface hardening: case hardening, carburizing, cyaniding, nitriding Induction hardening, hardenabilty, Jominy end-quench test. **10 Hrs**

Self study component: Age hardening of Al & Cu alloys

UNIT-V

Engineering Alloys: Properties, composition and uses of low carbon, mild medium & high carbon steels. Steels designation & AISI –SAE designation. Cast irons, gray CI, white CI, malleable CI, SG iron. Microstructures of cast irons. Light alloys: Al, Mg & Titanium alloys. Copper & its alloys: brasses & bronzes.

Composite materials: Introduction, Classification, Fabrication Methods, Characteristics of each type. **10 Hrs**

Self study component: Application of titanium alloys and Composite materials.

Course Outcomes

After learning all the units of the course, the student is able to;

1.Explain the internal Structure of Crystalline Solid, Stacking of layers, Coordination Number and Atomic Packing Factor for different crystal structure, Crystal imperfections and diffusion.

2.Explain the concept of Stress and strain, Hardness and plastic deformation.

3.Analyze phase diagram and Iron Carbon Equilibrium diagrams.

4.Explain heat treatment process to improve the physical and mechanical properties of different types of engineering materials.

5.Explain the concept of corrosion and different methods of prevention of corrosion.

6.Explain microstructures and different types of alloys.

Course Code: **P17ME33**	Semester: III	L-T-P-H: 3-2-0-5	Credits: 04
Contact Period - Lecture: 52Hrs.; Exam:3Hrs.		Weightage: CIE: 50 %;	SEE: 50%

Course Objectives:

The course aims to cover the basic principles and equations of fluid mechanics and their applications to the various engineering fields involving fluid flow problems so as to motivate the students to use fluid mechanics in engineering practice.

Course Content

UNIT-I

Properties of fluids: Introduction, properties of fluids, viscosity, Newton's law of viscosity. Surface tension, capillarity, vapor pressure and cavitations. Pascal's law, Fluid pressure at a point, pressure variation in a static fluid, absolute, gauge, atmospheric & vacuum pressures. **11Hrs**

Self study component: Bourdon's tube Pressure gauge and Bellows Pressure gauge

UNIT-II

Fluid statics: Simple manometers and differential manometers. Total pressure, centre of pressure in vertical and inclined plane surfaces and curved surfaces submerged in liquid. Buoyancy, Buoyant force, and centre of buoyancy. Meta centre and metacentric height (analytical method only). Stability of submerged and floating bodies. **10Hrs**

Self study component: Experimental method of finding metacentric height

UNIT-III

Fluid kinematics: Types of Fluid flow, continuity equation in three dimensions (Cartesian co-ordinate system only) and velocity and acceleration, velocity potential function, stream function and flow net.

Fluid Dynamics: Euler's equation of motion, Bernoulli's equation derived from fundamental principles & Euler's equation, Bernoulli's equation for real fluids. Fluid Flow measurements: Venturi meter, Orifice meter. **10Hrs**

Self study component: Flow measurement using Pitot tube and its types

UNIT-IV

Flow past immersed bodies: Drag, lift, expression for lift and drag, pressure drag and friction drag, boundary layer concept. Displacement thickness, momentum thickness and energy thickness. **Flow Through Pipes:** Frictional losses in pipe flow, Darcy and Chezy equations for loss of head due to friction in pipes, hydraulic gradient & total energy line. **10Hrs**

Self study component: Minor losses in flow through pipes

UNIT-V

Laminar flow and viscous effects: Reynold's number, critical Reynold's number, laminar flow through a round pipe- Hagen-Poisuille's equation, laminar flow between parallel stationery plates**.**

Dimensional Analysis: Introduction, derived quantities, Dimensions of physical quantities, dimensional homogeneity-Buckingham's π theorem, the Rayleigh's method. **11Hrs**

Self study component: dimensionless numbers and its significance

Course Outcomes

After learning all the units of the course, the student is able to;

1. **Explain** fluid properties like density, weight density, specific volume, specific gravity, viscosity and surface tension. **Solve** problems on viscosity and surface tension.
2. **Derive** Pascal's law and fundamental law of hydrostatics and **Explain** buoyancy and centre of buoyancy.
3. **Describe** the types of fluid flow and **solve** problems on continuity equation, Euler's equation of motion and Bernoulli's equation.
4. **Explain** boundary layer concept and **define** hydraulic gradient line and total energy line.
5. **Derive** Hagen-Poiseuille equation and **apply** dimensional analysis technique to obtain dimensionless relations.

Course Title: **Manufacturing Process - I**			
Course Code: **P17ME34**	Semester: III	L-T-P-H:4-0-0-4	Credits: 04
Contact Period - Lecture: 52Hrs. Exam: 3Hrs.		Weightage: CIE: 50 %;	SEE: 50%

Course Objectives: This course aims to facilitate the students to acquire basic knowledge about Casting, Welding process and metal cutting theory which are relevant to manufacturing of engineering components.

Course Content

UNIT-I

Introduction: Concept of Manufacturing process, **Casting process**: Introduction, Steps involved, Varieties of components produced by casting process, Advantages & Limitations of casting process. Introduction to furnace, Classification of furnaces.

Patterns: Definition, functions, Materials used for pattern, various pattern allowances and their importance. Classification of patterns. Binder: Definition, Types of binders used in moulding. **12Hrs**

Self study component: Need of additives, Types of additives

UNIT-II

Sand Moulding: Types of sand moulds, ingredients of moulding sand and Properties, core sands, ingredients properties, Core making, Core baking – Dielectric baking of cores, Principles of Gating: Elements of gating system, types of gates, gating ratio, function of risers, types of risers – open and blind risers. Types of defects in Castings, Causes and remedies.

Special Moulding Process : CO_2 moulding, Shell moulding, Investment casting, permanent mould casting :Gravity die-casting, Pressure die casting, centrifugal casting, Injection moulding, Squeeze Casting. **10Hrs**

Self study component: Thixocasting, Slush casting and continuous casting processes.

UNIT-III

Special Types of Welding: Resistance welding - principles, Seam welding, Thermit welding, Spot welding, projection welding, Friction welding, Explosive welding, and Brazing-Methods of Brazing.

Metallurgical Aspect in Welding: Structure of welds, Formation of different zones during welding, Heat affected zone (HAZ), Parameters affecting HAZ, Shrinkage in welds & Residual stresses. Weld ability and Weld ability testing. **10Hrs**

Self study component: Welding defects: causes, detection and remedy.

UNIT-IV

Theory of Metal Cutting: Single point cutting tool nomenclature, geometry, orthogonal and oblique cutting, mechanism of chip formation, types of chips, Merchants circle diagram and analysis, Ernst Merchant's solution, shear angle relationship, problems of Merchant's analysis.

Cutting Tool Materials: Desired properties, types of cutting tool materials – HSS, carbides, coated carbides CBN, PCD and ceramics Heat generation in metal cutting, factors affecting heat generation, measurement of tool tip temperature. **10Hrs**

Self study component: Cutting Fluids: Desired properties, types and selection

UNIT-V

Tool Wear: Causes and types of tool wear, effects of cutting parameters on tool life, tool failure criteria, Taylor's tool life equation, problems on tool life evaluation.

Mechanisms of machines : Turret Lathe Mechanism, Calculation of change of gears in thread cutting, Driving Mechanism of shaper and planer, Simple and compound indexing calculations, specification of grinding wheel, selection of grinding wheel, balancing of grinding wheel. **10Hrs**

Self study component: Super Finishing, Lapping, and honing

Course Outcomes

After learning all the units of the course, the student is able to;

1. **Explain** the steps involved in casting processes
2. **Distinguish** between various casting processes
3. **Explain** special types of welding processes.
4. Merchants circle diagram and
5. Tool life, Mechanism of machines.

Course Articulation Matrix

Course Title: **Basic Thermodynamics**			
Course Code: **P17ME35**	Semester: III	L-T-P-H: 0-0-0-0	Credits:
Contact Period - Lecture: 52Hrs. Exam: 3Hrs.		Weightage: CIE: 50 %;	SEE: 50%

Course Objectives: The course aims at to cover the basic principles of thermodynamics, to give students a feel for how thermodynamics is applied in engineering practice and to develop an intuitive understanding of thermodynamics by emphasizing the physics and physical arguments.

Course Content

UNIT-I

Fundamental Concepts & Definitions: Definition of Thermodynamics. Microscopic and Macroscopic approaches to the study of thermodynamics. Definitions of System (closed system) and Control Volume (open system) with examples. Definition of thermodynamic property, Intensive and extensive properties, thermodynamic state, process, quasi-static process, thermodynamic cycle. Thermodynamic equilibrium; definitions of thermal, chemical and mechanical equilibrium. Zeroth law of thermodynamics, Concept of Temperature with simple numerical problems on measurement of temperature. Thermodynamic definition of work, sign convention .Work done at the system boundary, process equation and expressions for work done in different processes. Definition of heat and its sign convention. Comparison of work and heat. Simple numerical problems on work and heat transfer only. **11 Hrs**

Self study component: examples to illustrate the definition of work and heat.

UNIT-II

First Law of Thermodynamics: Statement of the First law of thermodynamics for a closed system undergoing a cyclic process. First law of thermodynamics for a change of state of the system and concept of energy. Energy as a property of the system and its significance. Simple numerical problems on systems undergoing closed process.

Steady flow process, First law applied to steady flow process, derivation of steady flow energy equation and its applications. Simple numerical problems on systems undergoing steady flow process. **10 Hrs**

Self study component: Definition and significance of Internal Energy, Enthalpy and Specific heats

UNIT-III

Pure substances: Definition of pure substance, two-property rule applied to pure substance. Temperature-Volume diagram, definitions of Sub-cooled liquid, saturated liquid, mixture, saturated vapor and superheated vapor. Pressure-Temperature diagram. Definitions of triple point and critical point. Enthalpy of changes of a pure substance, temperature- Enthalpy diagram, definition of sensible heat, latent heat and super heat. Two phase mixture, quality of steam and definition of Dryness fraction. Measurement of dryness fraction using bucket calorimeter, throttling calorimeter, separating calorimeter and throttling and separating calorimeter. Simple problems on measurement of dryness fraction. **10 Hrs**

Self study component: Use of Steam tables.

UNIT-IV

Second Law of Thermodynamics: Thermal reservoir. Source and sink. Heat engine, heat pump and refrigerator. Efficiency and coefficient of performance. Kelvin – Planck and Clausius statement of the Second law of thermodynamics and equivalence of the two Statements. Definition of perpetual motion machines of II kind with example. Reversible and Irreversible processes. Reversible heat engine - Carnot Cycle and expression for efficiency of Carnot cycle. Simple numerical problems on heat engines and heat pumps. **10 Hrs**

Self study component: Factors that makes a process irreversible.

UNIT-V

Entropy: Clausius Inequality: Statement, and proof. Entropy: Definition, entropy as a property of the system. Principle of increase of entropy. Entropy as a quantitative test for

irreversibility. Expression for entropy using T-dS relations, Calculation of entropy changes in different thermodynamic cyclic process. Equation of state, internal energy and enthalpy. specific heats. Simple numerical problems based on heat, work, internal energy, enthalpy and entropy change in various processes. **11 Hrs**

Self study component: Universal and characteristic gas constants

Course Outcomes

After learning all the units of the course, the student is able to;

1. **Understand** the basic concepts and definitions used in engineering thermodynamics.
2. **Apply** the first laws of thermodynamics and the concepts of thermodynamics to basic energy systems.
3. **Understand** the properties of pure substances.
4. **Understanding** of the second law of thermodynamics and analysis in different applications
5. **Calculate** entropy for various simple real life systems

Course Title: **Computer Aided Machine Drawing**			
Course Code: **P17ME36**	Semester: III	L-T-P-H: 0-0-6-6	Credits: 03
Contact Period - Lecture: 52Hrs. Exam: 3Hrs.		Weightage: CIE: 50 %;	SEE: 50%

Course Objectives: The course aims at empowering the students with drafting skills and strengthens their ability to draw, read and interpret machine part/assembly using computer and relevant software and following standards codes and norms.

Course Content

UNIT-I

Introduction: Review of basic sketching commands and navigational commands.

Sections Of Solids: Sections of Pyramids, Prisms, Cube, Tetrahedron, Cone and Cylinder resting only on their bases (No problems on axis inclinations, spheres and hollow solids). True shape of sections.

Orthographic Views: Conversion of pictorial views into orthographic projections of simple machine parts with and without section. (Bureau of Indian standards conventions are to be followed for the drawings), Line conventions. **12 Hrs**

UNIT-II

Thread Forms: Thread terminology, sectional view of threads. ISO Metric (Internal & External), BSW (Internal & External), square and Acme threads, Buttress thread, Sellers thread, American Standard thread.

Fasteners: Hexagonal headed bolt and nut with washer (assembly), square headed bolt and nut with washer (assembly) simple assembly using stud bolts with nut and lock nut.

12 Hrs

UNIT-III

Riveted Joints: Single and Double riveted lap joints, butt joints with single/double cover straps (chain and Zigzag, using snap head rivets). **12 Hrs**

UNIT-IV

Keys & Joints: Study of keys: Parallel key, Taper key, feather key, Gibhead key and Woodruff key.

Joints: cotter joint (socket and spigot), knuckle joint (pin joint), Universal joint.

Couplings: Protected type flanged coupling, pin (bush) type flexible coupling, Muff coupling. **15 Hrs**

UNIT-V

Assembly Drawings

Solids of Protrusion, Assembly drawing of following machine parts (3D parts to be created and assemble and then getting 2D drawing with required views, including part drawing).

Introduction to geometrical dimensioning and tolerance.

1. Screw Jack
2. I.C. Engine Connecting Rod
3. Machine Vice
4. Plummer Block
5. Fuel Injector **27 Hrs**

Text Books

1. N.D. Bhat and V.M.Panchal, "**Machine Drawing"**, Charotar Publishing Hous, 46th Edition, 2011, ISBN: 9789380358390
2. N. Siddeshwar, P. Kannaiah and V.V.S. Sastri, "**Machine Drawing"** published by Tata Mc. GrawHill, 2010, ISBN: 9780074603376
3. Tryambaka Murthy, **"Machine Drawing",** CBS Publications, 2nd Edition, 2008, ISBN: 9788123916590

Reference Books

1. K.R. Gopala Krishna, "**Machine Drawing"**, Subhash Publication, 1st Edition, 1984.

Course Outcomes

After learning all the units of the course, the student is able to;

1. **Solve** problems on sections of regular solids.
2. **Convert** pictorial views to orthographic views.
3. **Draw** 2D views of simple machine elements
4. **Assemble** the components of mechanical systems in 3D environment.

Course Articulation Matrix

Course Title: **Fluids Measurement Laboratory**			
Course Code: **P17MEL37**	Semester: III	L-T-P-H: 0-0-3-3	Credits: 1.5
Contact Period - Lecture: 52Hrs. Exam: 3Hrs.	Weightage: CIE: 50 %;		SEE: 50%

Course Objectives: The course aims at enabling the students to understand the basic measurement techniques of fluid flow, fuels and lubricants properties.

Course Content

PART-A

Exp-1
Calibration of venturi meter and determination of its co-efficient of discharge **3Hrs**

Exp-2
Calibration of orifice meter and determination of its co-efficient of discharge **3Hrs**

Exp-3
Calibration of V-Notch for flow through a channel. **3Hrs**

Exp-4
Determination of coefficient of friction in flow through pipes. **3Hrs**

Exp-5
Determination of vane efficiency (Coefficient of impact) for different vanes. **3Hrs**

PART-B

Exp-6
Determination of Flash point and Fire point of lubricating oil using Abel Pensky and Pensky Apparatus. **3Hrs**

Exp-7
Determination of Viscosity of lubricating oil using Redwoods, Saybolts and Torsion Viscometers. **3Hrs**

Exp-8
Determination of Calorific value of solid fuel using Lewis Thomson calorimeter. **3Hrs**

Exp-9
Determination of Calorific value of gaseous fuels using Junkers Gas calorimeter. **3Hrs**

Seminar **6Hrs**
Test **3Hrs**

Reference Books

3. P .K. Nag, **"Basic and Applied Thermodynamics"** Tata McGraw Hill, 3rd Edition, 2006, ISBN: 9780070260627

Course Outcomes

After learning all the units of the course, the student is able to;

1. **Calibrate** venturimeter, orificemeter and V-notch.
2. **Determine** friction coefficient for fluid flow in pipes.
3. **Determine** the efficiencies of vertical, inclined and curved vanes.
4. **Determine** Flash point, Fire point and viscosity of lubricating oil.
5. **Determine** Calorific value of solid and gaseous fuels.

Course Title: **Foundry and Forging Laboratory**			
Course Code: **P17MEL38**	Semester: III	L-T-P-H: 0-0-3-3	Credits: 1.5
Contact Period - Lecture: 52Hrs. Exam: 3Hrs.		Weightage: CIE: 50 %;	SEE: 50%

Course Objectives: The course aims at enabling the students to have practical knowledge about preparation of components through sand casting and forging processes.

Course Content

PART-A

Exp-1

Use of foundry tools and equipments. **3Hrs**

Exp-2

Preparation of moulds using two boxes.Use of patterns: split pattern, match plate pattern and cores. Mould cavity volume calculations. **6Hrs**

Exp-3

Preparation of casting: Aluminium or cast iron (demonstration only). **6Hrs**

PART-B

Exp-4

Use of forging tools and equipments. **3Hrs**

Exp-5

Preparing minimum three models involving upsetting, drawing and bending operations, along with length and volume calculations. **12Hrs**

Seminar **3Hrs**

Test **3Hrs**

2. P. N. Rao, **"Manufacturing Technology: Foundry Forming and Welding"** 2nd Ed., Tata McGraw Hill, 2003.

Course Outcomes

After learning all the units of the course, the student is able to;

1.**Prepare** casting moulds using foundry sand.

2.**Prepare** simple cast components using Aluminium/Cast Iron.

3.**Calculate** the material requirement for forging.

4.**Prepare** simple forged components.

Relevance of the course: 3rd Semester is considered as the right time to build a base to a student's analytical and logical ability. This course connects the basics of maths learnt in school into the present problem solving techniques. It creates an awareness towards the importance and significance of an individual's logical abilities.

Course Content

UNIT-I

Sharpen your axe!!

Vedic mathematics:

Viniculum and de- viniculum, subtractions using viniculum .Nikhilum multiplication: For numbers close to base values, multiplication of any two digit numbers or three digits number using criss cross method. Finding the square, square root, cubes , cube root of two digit and three digit numbers quickly. Approximation in multiplication and division. Checking the answer using digital sum method

Self-study Component- Get hands on multiplication tables, increasing the speed in basic arithmetic operations. Classification of numbers.

Percentage calculations and ratio comparison:

Percentage calculations: Percentage rule for calculating , percentage values through additions, percentage– fraction table, approximation in calculating percentages. Application based problems

Ratio comparison: calculations method for ratio compressions: 1. the cross multiplication method, 2. percentage value compression method 3. numerator and denominator percentage change method. Method for calculating the value of percentage change in the ratio. Application based problems.

Self-study Component- Thorough with fractions and decimal values. Applications of tabulated fractions. Product of means and extremes. **8 Hrs**

UNIT-II

Analytical Reasoning 1: series

Number series: Standard patterns of number series, pure series: perfect square, square cube, prime, combination of this series. Difference series, ratio series, mixed series, geometric series, two-tier arithmetic series, three-tier arithmetic series, change in the order for difference series, change in the order for ratio series, sample company questions.

Letter series: Alphabet and Alphanumeric series, finding the missing term based on logic learnt in number series module, continuous pattern series, correspondence series. sample company questions.

Picture series : image analysis, addition deletion rotation or modification of lines or shapes. Understanding the symmetry of the image. Mirror image analysis. sample company questions.

Self-study Component- Basic knowledge of letter positions, Different number series for example – even, odd, prime, composite etc **6 Hrs**

UNIT-III

Number system:

Introduction, **Integers:** Remainder zero concept, Odd and Even Integers, Negative and positive integers, power number a^x, properties of a perfect square number. **Prime number:** General method to identify the prime number, properties of prime numbers. Euler's number. **Factorial number:** Wilson's theorem, important results on factorial. **Divisor:** number of divisors, sum of divisors, number expressed as the product of two factors.

Divisibility rules: divisibility of a whole number by a whole number, divisibility of an expression by an expression. **Modulus concept:** divisibility rules in modulus, rules of

operations in modulus. **Finding one remainder:** One divisor, remainder of ($a^n - b^n$), remainder for more than one divisor.

Unit digit: Concept of power cycle, finding last two digits**.** Number of trailing zeroes.

Self-study Component-Basic arithmetic operations, knowledge about quotient and remainders, multiples and factors. **6 Hrs**

UNIT-IV

Simple equations, Ratio Proportions and Variations:

Simple equations: Linear equations-Linear equations in one variable, linear equation in two variables, Different methods of solving linear equations in two variables– Method of elimination, Method of substitution, Method of cross multiplication. Format of equations that can be converted to linear equations, Linear equations of three variables, Inequalities and its properties. Advanced problems on Simple equations. Age problems.

Ratio Proportions and Variations: Understanding the meaning and difference between ratio, proportion and variation. Properties of ratio, Comparison of more than two quantities, Proportion, Properties of proportion - Componendo, Dividendo, Invertendo, Alternendo. Continued proportion, Mean proportion. Variation - Direct variation, Indirect variation, Joint variation, Short cut methods to solve problems on variation.

Self-study Component-Knowledge about factors, types of factors. Splitting the middle term rule, formula rule. **6 Hrs**

UNIT-V

Building the fundamentals of logical reasoning:

Arrangement:

Approach to tackle questions, Different types of arrangement– Linear arrangement, Circular arrangement. Selection, Double line map. Possible ways of arrangement– Words or numbers, left side only, right side only, left right alternate, increasing or decreasing order, interchange vs push, Strategy for solutions– some tips for quick answers, general strategy.

Directions :

Basics. Pythagorean theorem, Pythagorean triplets, Solving problems for practice.

Blood relations :

Some typical relations that we come across, family tree, Structuring the given problem step by step. Suggested methods– Backtracking, drawing family tree. Problems on blood relations and professions.

Self-study Component-Basic knowledge of directions, Pythagoras theorem. Logical reasoning skills, Relations, Family tree. **6 Hrs**

Reference Books

1. The Trachtenberg speed system of basic mathematics, published by Rupa publications.
2. CAT Mathematics by AbhijithGuha. published by PHI learning private limited.
3. Quantitative aptitude by Dr. R. S Agarwal, published by S.Chand private limited.
4. Verbal reasoning by Dr. R. S Agarwal , published by S. Chand private limited.
5. Quantitative aptitude for CAT by Arun Sharma, published by McGraw Hill publication.
6. Analytical reasoning by M.K Pandey BSC PUBLISHING.CO.PVT.LTD

Course Outcomes

After learning all the units of the course, the student is able to;

1. Solve mathematical calculations in less duration compared to the conventional method. L2
2. Give examples for AP, GP and HP and differentiate between them. L1
3. Apply divisibility rules , power cycle method and evaluate the significance of the number system module. L2
4. Point out the errors in the problems concerning inequalities and solve simple equations and problems based on ratio, proportion and variation. L5
5. Solve the problems based on blood relations, directions and arrangement. L4

Course Title: **Additional Mathematics-I** (Mandatory Learning Course: **Common to All Branches)** (A Bridge course for Diploma qualified students of III Sem. B. E.)			
Course Code: **P17MADIP31**	Semester: III	L-T-P-H: 4-0-0-4	Credits: **NA**
Contact Period - Lecture: 52Hrs. Exam: 3Hrs.	Weightage: CIE: 50 %;		SEE: 50%

Course Content

UNIT-I

Complex Trigonometry: Complex Numbers: Definitions & properties. Modulus and amplitude of a complex number, Argand's diagram, De-Moivre's theorem (without proof). Roots of complex number - Simple problems.

Vector Algebra: Scalar and vectors. Vectors addition and subtraction. Multiplication of vectors(Dot and Cross products). Scalar and vector triple products-simple problems. **12Hrs**

UNIT-II

Differential Calculus: Review of successive differentiation. Formulae for n^{th} derivatives of standard functions- Liebnitz's theorem(without proof). Polar curves –angle between the radius vector and the tangent pedal equation- Problems. Maclaurin's series expansions-Illustrative examples. Partial Differentiation : Euler's theorem for homogeneous functions of two variables. Total derivatives-differentiation of composite and implicit function. Application to Jacobians, errors & approximations. **10 Hrs**

UNIT-III

Integral Calculus: Statement of reduction formulae for $sin^n x$, $cos^n x$, and $sin^m x cos^m x$ and evaluation of these with standard limits-Examples. Differentiation under integral sign(Integrals with constants limits)-Simple problems. Applications of integration to area, length of a given curve, volume and surface area of solids of revolution. **10 Hrs**

UNIT-IV

Vector Differentiation: Differentiation of vector functions. Velocity and acceleration of a particle moving on a space curve. Scalar and vector point functions. Gradient, Divergence, Curl and Laplacian (Definitions only). Solenoidal and irrotational vector fields-Problems. **10 Hrs**

UNIT-V

Ordinary differential equations (ODE's): Introduction-solutions of first order and first degree differential equations: homogeneous**,** exact, linear differential equations of order one and equations reducible to above types. Applications of first order and first degree ODE's - Orthogonal trajectories of cartesian and polar curves. Newton's law of cooling, R-L circuits-Simple illustrative examples from engineering field. **10 Hrs**

Text Books

1. B.S. Grewal: Higher Engineering Mathematics, Khanna Publishers, New Delhi, 42^{nd} Ed. 2012.

Reference Books

1. E. Kreyszig: Advanced Engineering Mathematics, John Wiley & Sons, 6th Ed., 2007.
2. N.P.Bali and Manish Goyal: Engineering Mathematics, Laxmi Publishers, 7th Ed., 2007.

Semester:- IV

Course Title: **Engineering Mathematics-IV(Common to AU, CV, ME and IP& E Branches)**			
Course Code: **P17MAAC41**	Semester: IV	L-T-P-H: 3-2-0-5	Credits: 04
Contact Period - Lecture: 52Hrs. Exam: 3Hrs.		Weightage: CIE: 50 %;	SEE: 50%

Relevance of the Course:

Engineering Mathematics-IV deals with Complex analysis. Here we understand the basics complex variable, analyticity and potential fields through complex potential and conform transformations interpret the solution in fluid flow and electromagnetic problems.

The process of complex integration and series representation of functions of complex variables field theory and other Engineering applications.

Solving algebraic, transcendental and ordinary differential equations arising in vario engineering flow and design data problems.

In Statistics interpretation and analyzing the data, fitting of curves of best fit for experimen data arising in engineering calculations and analyze the same by expressing in the form regression lines.

Probability distributions and use them in analyzing and solving engineering problems associat with probability models

Variational problems used in structural engineering, aerospace, ground water flows a environmental fluid dynamics, etc

Understand series solution of ODE's and special functions in engineering fields.

Course Content

UNIT-I

Complex Analysis: Introduction to functions of complex variables. Definitions- limit, continuity and differentiability. Analytic functions. Cauchy–Riemann equations in Cartesian and polar forms problems on properties of analytic functions (No proof). Construction of analytic function: Milne-Thomson method. Conformal transformation–Definitions. Discussion of transformations: $w=z^2$, $w=e^z$, $w = z + 1/z \ (z \neq 0)$ Bilinear transformations.

Complex integration: complex line integrals. Cauchy theorem, Cauchy integral formula. Taylor's and Laurent's series (Statements only). Singularities, poles and residues. Cauchy residue theorem (statement only). Simple illustrative examples.

Self-Study Component: Derivation of Cauchy- Riemann equation in Cartesian and polar form. Derivation of Cauchy theorem, Cauchy integral formula and Cauchy's residue theorem.

11 Hrs

UNIT-II

Numerical Methods-II: Solution of algebraic and transcendental equations: Bisection method, Regula-False & Newton–Raphson method. Fixed point iteration method: Aitken's Δ^2- process - Illustrative examples only.

Numerical solution of ordinary differential equations (ODE's): Numerical solutions of ODE's of first order first degree – Introduction. Taylor's series method. Modified Euler's method, Runge - Kutta method of IV order, Milne's and Adams predictor & corrector methods (All formulae without proof).

Self-Study Component: Solution of second order ordinary differential equations using Runge-Kutta methods. Solution of first order simultaneous differential equations**. 10 Hrs**

UNIT-III

Statistics: Brief review of measures of central tendency and dispersion. Moments, skewness and kurtosis. Curve fitting-least square method: $y = a + bx; y = ax^b, y = ab^x$ *and* $y = ax^2 + bx + c.$ Prof. Karl Pearson's coefficient of correlation and lines of regression.

Probability Theory: Brief review of elementary probability theory. Random variables (discrete and continuous)-Introduction to probability distributions- probability mass/density

functions and cumulative probability density functions – Illustrative examples. Discrete probability distributions- Binomial and Poisson's distributions; Continuous probability distributions - exponential and normal distributions. (No derivation of mean and variance). Illustrative examples from engineering and industrial fields.

Self-Study Component: Basic definitions of probability and problems up to Bayes' theorem. To fit curves of the type : $y = ae^{bx}$, Derivation of Mean and SD of Binomial &Poisson distribution**.** **11 Hrs**

UNIT-IV

Joint probability distributions and Markov chains: Concept of joint probability. Joint probability distributions of discrete random variables. Expectation, covariance, correlation coefficient – simple examples. Probability vectors, stochastic matrices. Fixed point and regular stochastic matrices.

Linear Algebra-II: Numerical methods for system of linear equations- Gauss-Jacobi and Gauss- Seidel iterative methods. Relaxation method. Determination of largest eigen value and corresponding eigen vector by power method.

Self-Study Component: Ramanujan's Method to find the smallest root of a polynomial.

10 Hrs

UNIT-V

Calculus of Variations: Variation of a function and a functional, extremal of a functional. Variational problems – Euler's equation. Applications to standard variational problems including geodesics, minimal surface of revolution, hanging chain and brachistochrone problems.

Series solutions of ODE's and special functions: Power series solution of a second order ODE, Series solution-Frobenius method. Series solution leading to $J_n(x)$- Bessel's function of first kind. Expansions for $J_{1/2}(x) and\ J_{-1/2}(x)$. -simple related examples. Series solutions of Legendre's differential equation leading to $P_n(x)$-Legendre's polynomials. Rodrigue's formula (No Proof) - simple illustrative examples.

Self-Study Component: Basics of Series solutions of ODE's; analytic, singular point and basic recurrence relations **10 Hrs**

Text Books

1.Higher Engineering Mathematics: B.S. Grewal, Khanna Publishers, New Delhi, 42nd Ed. 2012.

2.Advanced Engineering Mathematics: - E. Kreyszig, John Wiley & Sons, 10th Ed., 2011

Reference Books

1.Probability: - Seymour Lipschutz, Schaum's outline series, McGraw-Hill publications, **2nd Edition, 2002**.

2.**Introductory Methods of Numerical Analysis: - S.S.Sastry, PHI, 3rd Ed.2000.**

3.Advanced Modern Engineering Mathematics: - Glyn James, Pearson Education Ltd., 3rd Edition, 2011.

4.Higher Engineering Mathematics: - B.V. RAMANA, McGraw Hill Education, 2007

Note: - Each unit contains ***two*** full questions of ***20 marks*** each. Students are required to Answer ***five*** full questions choosing at least ***one*** question from each unit.

Course Outcomes

After learning all the units of the course, the student is able to;

1. Explain the concept of analyticity and potential fields through complex functional/potential, conformal transformations and interpret the solution in fluid flow and electromagnetic problems and describe the process of complex integration and learn series representation of a function of complex variables, residues and poles.

2. Apply the familiarity of numerical methods for solving algebraic and transcendental equations and demonstrate single-step and multi-step numerical methods for solving ordinary differential equations and interpret the solution in engineering applications.
3. Apply the knowledge of statistics in interpretation the data, fitting of a linear and non-linear curves of best fit for experimental data arising in engineering calculations and analyze the same by expressing in the form of regression lines. And, Illustrate the concept of random variables (discrete/continuous) and related probability distributions and use them in analyzing and solving engineering problems associated with probability models
4. Define the concept of joint probability of two random variables and apply the knowledge of joint probability distribution in interpreting data through statistical measure. And, analyze the notion of higher transition probabilities, the Markov chain and queuing models arising in engineering problems for feasible random events.

   Understand the procedure of numerically solving large systems of linear algebraic equations and obtaining eigen value and eigen vector corresponding to a large eigen vector, with the aid of standard methods of numerical linear algebra.
5. Explain functional and extremal of functional Euler's equation and applications of calculus of variations to the standard variational problems and basic concepts of reliability theory including failure laws required in the analysis of engineering experiments occurring in engineering fields.

   Obtain series solution of essential ODE's such as Bessel's and Legendre's differential equations and understand their scientific/engineering utility

Course Title: **Applied Thermodynamics**			
Course Code: **P17ME42**	Semester: IV	L-T-P-H: 4-0-0-4	Credits: 04
Contact Period - Lecture: 52Hrs. Exam: 3Hrs.		Weightage: CIE: 50 %;	SEE: 50%

Course Objectives: Applied thermodynamics is a continuation course of Basic Thermodynamics with emphasis on the analysis of gas power and refrigeration cycles and the application of basic principles to engineering problems with systems involving compressors, refrigeration and I C engines.

Course Content

UNIT-I

AIR STANDARD CYCLES: Carnot Cycle, Otto Cycle and Diesel Cycle, their P-V and T-S diagrams, description, expression for efficiencies and definition of mean effective pressures. Comparison of Otto and Diesel cycles. Brayton cycle for gas turbine power plants. Deviations of practical gas turbine cycles from ideal cycles. Variations of Brayton cycle like Regeneration, reheating and Inter-cooling. **11 Hrs**

Self study component: Duel cycle P-V and T-S diagrams, description.

UNIT-II

VAPOUR POWER CYCLES: Carnot vapor power cycle and its performance. Simple Rankine cycle, description, T-S diagram, and Expression for efficiency. Effects of maximum pressure, exhaust pressure and maximum temperature on the performance of simple Rankine cycle. Deviation of simple Rankine cycle from ideal cycles Analysis of Reheat Cycle, Ideal regenerative cycle, practical regenerative cycles with open and closed type feed water heaters. **11 Hrs**

Self study component: Comparison of Carnot and Rankine cycles.

UNIT-III

RECIPROCATING AIR COMPRESSORS: Working of single stage reciprocating air compressors, Work input using PV diagram and steady flow analysis. Effect of clearance and volumetric efficiency, isothermal and mechanical efficiencies, Expression for optimum intermediate pressure. Imperfect inter cooling. **10 Hrs**

Self study component: Multistage compression, advantages of multistage compression.

UNIT-IV

REFRIGERATION: Introduction, Units of refrigeration and COP. Pressure – Temperature diagram and Pressure- enthalpy diagram. Mechanical vapor compression refrigeration systems, sub-cooling and super-heating of vapor, description, analysis, refrigerating effect, capacity, power required and Simple numerical problems on vapor compression systems. Refrigerants for vapor compression systems. Air refrigeration, Steam jet refrigeration, absorption refrigeration, COP of an absorption refrigeration system. **10 Hrs**

Self study component: Properties of refrigerant.

UNIT-V

TESTING OF I.C. ENGINES: Testing of two-stroke and four strokes SI and CI engines. Performance Factors, Basic testing factors and basic measurements for engine performance. Indicated Power, Friction Power: Willan's line method, Morse Test, and Motoring test. Brake Power: Fuel consumption: volumetric type. Air consumption: Air Box Method to determine air consumption. Heat balance sheet and related numerical problems. **10 Hrs**

Self study component: principle of Dynamometer, mechanical, Hydraulic and eddy current dynamometers.

Course Title: **Mechanical Measurements & Metrology**			
Course Code: **P17ME43**	Semester: IV	L-T-P-H: 4-0-0-4	Credits: 04
Contact Period - Lecture: 52Hrs. Exam: 3Hrs.	Weightage: CIE: 50 %;		SEE: 50%

Course Objectives: The course aims at enabling the students to understand the basic concepts of Measurement and Metrology and strengthening their knowledge about advancements in **s**ystem of Limits, Fits, Tolerances and Gauging of mechanical elements which are commonly used in industries.

Course Content

UNIT-I

Basic Concepts of Measurement and Metrology: Definition and significance of measurement, Generalized measurement system, Performance characteristics of measuring instruments (Only static characteristics), Inaccuracy of Measurements, Definition and objectives of metrology. Standards, Subdivision of standards, Line and end standard, Imperial standard yard, Wave length standard, International Prototype meter, Transfer from line to end standard. Calibration of end bars, Slip gauges, Wringing phenomena, Numerical problems on building of slip gauges. **10 Hrs**

Self study component: Signal Types, Modes of operation.

UNIT-II

System of Limits, Fits, Tolerances and Gauging: Definition of tolerance, specification in assembly, Principle of inter changeability and selective assembly. Concept of limits of size and tolerances, Compound tolerances, accumulation of tolerances. Definition of fits, types of fits. Hole basis system and shaft basis system, Geometric dimensioning and tolerancing.
Classification of gauges, Basic concept of design of gauges (Taylor's principles), wear allowance on gauges. Types of gauges -plain plug gauge, ring gauge, snap gauge, gauge materials. Gauge Design and numerical problems. **10 Hrs**

Self study component: Limit gauges for tapers.

UNIT-III

Comparators: Characteristics and classification of comparators. Mechanical comparators-Johnson Mikrokator, Sigma Comparators, Optical Comparators -principles, Zeiss ultra optimeter, Electric and Electronic Comparators, LVDT, Pneumatic Comparators, Solex Comparator. Back Pressure gauges, **Angular Measurements:** Principle and use of Sine bars, Sine center.
Surface roughness and Metrology of Screw Thread: Surface roughness terminology, Methods of measuring surface roughness, Taylor-Hobson talysurf, Analysis of surface traces, Measurement of basic elements of thread, worked examples. Measurement of major diameter, minor diameter, pitch, angles and effective diameter of screw threads by 2-wire and 3-wire methods, Best size wire. **12 Hrs**

Self study component: Errors in threads, Angle gauges.

UNIT-IV

Transducers: Introduction, Transfer efficiency, Loading effect, Primary and Secondary transducers, classification of transducers with examples. Advantages of each type transducers.
Signal Conditioning: Mechanical systems, Electrical intermediate modifying devices, Input circuitry-simple current sensitive circuit, Electronic amplifiers, Filters, Types of filters, telemetry.
Terminiting devices: Cathode Ray Oscilloscope, Oscillographs, X-Y Plotters. **10 Hrs**

Self study component: Toolmakers microscope, Profile projector

UNIT-V

Strain Measurement: Methods of strain measurement, Strain gauges, Preparation and mounting of strain gauges, Gauge factor.

Measurement of Force: Introduction, Proving ring

Measurement of Torque: Introduction, Hydraulic dynamometer.

Measurement of Pressure: Introduction, Use of elastic members, Bridgeman gauge, Mc Leod gauge, Pirani Gauge

Temperature Measurement: Resistance thermometers, Thermocouple, Laws of thermocouple, Thermocouple materials. **10 Hrs**

Self study component: Pyrometers, Optical pyrometers.

Course Outcomes

After learning all the units of the course, the student is able to;

1. **Explain** measurement, metrology, various standards of measurements and elements of measurement systems.
2. **Calculate** tolerances and **design** plug and ring gauges.
3. **Explain** different types of comparators, angle measuring devices and **derive** expressions for finding effective diameter of screw threads.
4. **Explain** sensor transducers, signal conditioning and terminating devices with associated parameters.
5. **Explain** basic principles and devices involved in measuring strain, force, torque, pressure and temperature.

Course Code: **P17ME44**	Semester: IV	L-T-P-H: 3-2-0-5	Credits: 04
Contact Period - Lecture: 52Hrs. Exam: 3Hrs.	Weightage: CIE: 50 %;		SEE: 50%

Course Objectives: The course aims at enabling the students to understand the basic concepts of stress, strain and deformation of mechanical elements subjected to axial, bending and torsional loading.

Course Content

UNIT-I

Simple stresses and strains: Stress, types, Saint Venant's principle, stress-strain curve for mild steel, working stress, proof stress, factor of safety, Hooke's law, modulus of elasticity, strain energy, proof resilience, longitudinal strain, lateral strain, poison ratio, stress strain analysis of bars of uniform cross section, stepped bars, bars with continuously varying section, principle of superposition. Modulus of rigidity, volumetric strain, expression for volumetric strain, bulk modulus, relation among elastic constants. **10 Hrs**

Self study component: Strain energy due to gradually applied normal load; Strain energy due to gradually applied shear load

UNIT-II

Compound bars: Stress analysis of composite bars. Thermal stresses in uniform and compound bars**. Compound stresses**: Principal planes and stresses, plane of maximum shear stress in general 2D system. Mohr's circle diagram. **10 Hrs**

Self study component: Strain on inclined plane due to (i) normal stress in x direction (ii) normal stress in y direction (iii) shear stress in x-y direction; Mohr's circle for strain, Principal strain.

UNIT-III

Shear force and Bending Moment: Types of beams, loads and supports. SF and BM, sign conventions, relationship between load intensity, shear force and bending moment. SFD and BMD for different beams subjected to concentrated loads, Uniformly Distributed Load and Uniformly Varying Load. **10 Hrs**

Self study component: Shear force and Bending moment diagrams due to inclined loads; Loading and Bending moment diagram from shear force diagram

UNIT-IV

Bending and shear stresses in Beams: Theory of simple bending, assumptions in simple bending, relationship between bending stresses and radius of curvature, Flexural strength (Modulus of rupture), Flexural Modulus, relationship between bending moment and radius of curvature, section modulus, moment of resistance of a section. Bending stresses in beams of uniform section. Shearing stresses in beams, shear stress across rectangular, circular, I and T sections. **(Moment of Inertia to be provided for numerical problems).**

Deflection of Beams: Introduction, Differential equation of deflection; Flexural rigidity, Macaulay's method for simply supported beams with point load and UDL. **12 Hrs**

Self study component: Beam of uniform strength – uniform beam of rectangular section replaced by (i) Beam of constant depth (ii) Beam of constant width.

UNIT-V

Torsional stresses: Introduction to torsion, pure torsion, assumptions, derivation of torsion equation, polar modulus, torsional rigidity, and torque transmitted by solid and hallow circular shafts.

Columns: Introduction to Columns, Euler theory for axially loaded elastic long columns, Euler equation for columns with (i) both ends hinged (ii) one end fixed and other end free, Limitations of Euler's theory, Rankine's formula.

Frames: Types of frames, Analysis of simply supported perfect frames using method of joints and method of sections subjected to horizontal and vertical loads only. **10 Hrs**

Self study component: Shafts in series and parallel; Torsional stresses in stepped shafts, concentric shafts.

Course Outcomes

After learning all the units of the course, the student is able to;

1. **Classify** different types of stresses, strain and deformations induced in the mechanical components due to external loads.
2. **Estimate** thermal stresses; **calculate** principal stresses in simple 2D elements.
3. **Draw** Shear Force Diagrams and Bending Moment Diagrams for uniform beams for different types of loads and support conditions.
4. **Compute** and **analyze** bending and shear stresses and deflections induced in beams.
5. **Estimate** torsional stresses in circular shafts; **Analyze** columns under buckling load; **Analyze** perfect frames under loads.

Course Title: **Kinematics of Machinery**			
Course Code: **P17ME45**	Semester: IV	L-T-P-H: 4-0-0-4	Credits: 04
Contact Period - Lecture: 52Hrs. Exam: 3Hrs.		Weightage: CIE: 50 %;	SEE: 50%

Course Objectives: The course aims at exposing students to the working principles of simple planar mechanisms and enabling them to understand the basic concepts of kinematic analysis of simple planar mechanisms.

Course Content

UNIT-I

Introduction to Mechanisms: Introduction, Rigid and Resistant bodies, kinematic pairs, degrees of freedom, Grubler's criterion, Kinematic chain, mechanism, machine and structure. Mobility of Mechanisms, Inversions of mechanisms: Four bar chain, Single slider crank chain and Double slider crank chain.

Simple Mechanisms: Quick return motion mechanisms-Whitworth mechanisms, Crank and slotted lever mechanisms. Intermittent motion mechanisms- Geneva mechanism, Ratchet and pawl mechanism. Peaucelliar's Straight line mechanism, Toggle mechanism, Pantograph, Ackerman steering mechanism, Davis steering gear mechanism. **10 Hrs**

Self study component: Working principle and application of Universal joint (Hook joint).

UNIT-II

Velocity analysis of mechanisms: Introduction, vectors, addition and subtraction of vectors, absolute and relative motions, motion of a link, velocity analysis of a link by relative velocity method, velocity analysis of four-bar mechanism, slider-crank mechanism and crank and slotted lever mechanism by relative velocity method. Instantaneous centre, number of I-centres, Kennedy's theorem, locating I-centres, velocity analysis of four bar and slider crank mechanisms by I-centre method.

Acceleration analysis of mechanisms: Radial and tangential components of acceleration, Angular acceleration, Acceleration analysis of a link by relative acceleration method, Acceleration analysis of four bar mechanisms and slider-crank mechanisms by relative acceleration method. **12 Hrs**

Self study component: Coriolis Component of Acceleration.

UNIT-III

Gears: Classification & application of different types of gears, Spur Gear terminology, law of gearing, gear tooth profiles, Path of contact, Arc of contact, Contact ratio, Interference in involute gears and under cutting. Methods of avoiding interference and Back lash. Numerical problems. **10 Hrs**

Self study component: Application and limitations of different types of gears.

UNIT-IV

Gear trains: Simple gear trains, Compound gear trains, Reverted gear trains, Epicyclic gear trains, Tabular method of finding velocity ratio of epicyclic gear trains. Estimation of Tooth load and torque in epicyclic gear trains.

Belt drive: Introduction, classification, **(derivation of length of belt not included)** velocity ratio, effect of slip, ratio of belt tensions, effect of centrifugal tension, power transmitted, effect of initial belt tension. V-belts – ratio of belt tensions, power transmitted. Numerical problems. **10 Hrs**

Self study component: Working principle of Automobile differential gear. Comparison of chain drive, belt drive and rope drive.

UNIT-V

Cams: Types of cams, types of followers, Types of follower motion - SHM, Uniform velocity, uniform acceleration and retardation and Cycloidal motion. Displacement, Velocity and acceleration of follower for different types of motion; Displacement diagram for follower

motion, Construction of cam profiles - Disc cam with reciprocating follower having knife-edge, roller and flat –faced follower. **10 Hrs**

Self study component: Applications of different types of cams.

Course Outcomes

After learning all the units of the course, the student is able to;

1. **Identify** various mechanisms, **determine** their degrees of freedom; **describe** various inversions of four bar chain, single and double slider crank chain.
2. **Analyze** velocity of four bar and slider-crank mechanisms by relative velocity method and Instantaneous centre method. **Analyze** acceleration of four bar and slider-crank mechanisms by relative acceleration method.
3. **Classify** different types of gears; **Explain** Spur Gear terminology, law of gearing, interference and Back lash. **Derive** expressions for Path of contact, arc of contact and contact ratio. **Solve** numerical problems related to gears.
4. **Describe** Simple, Compound and Epicyclic gear trains; **Determine** velocity ratio, tooth load and torque in epicyclic gear trains. **Explain** and **calculate** ratio of belt tensions; **Estimate** power transmitted by belt drive; **Analyze** effect of slip, initial and centrifugal belt tension on performance of belt drive.
5. **Explain** cam and follower types; **Explain** different follower Motions; **Construct** cam profiles for different types of follower motions.

Course Title: **Manufacturing Process - II**			
Course Code: **P17ME46**	Semester: IV	L-T-P-H: 4-0-0-4	Credits: 04
Contact Period - Lecture: 52Hrs. Exam: 3Hrs.		Weightage: CIE: 50 %;	SEE: 50%

Course Objectives: This course enables the student to understand basic manufacturing processes like forging, rolling, sheet metal forming and powder metallurgy.

Course Content

UNIT-I

INTRODUCTION TO METAL WORKING: Classification of metal working processes, characteristics of wrought products, advantages and limitations of metal working processes. Concepts of true stress, true strain, biaxial & triaxial stresses. Determination of flow stress. Principal stresses, Tresca & Von-**Mises** yield criteria, concepts of plane stress & plane strain. Temperature, strain rate, friction and lubrication, hydrostatic pressure in metalworking, Deformation zone geometry, workability of materials. **12Hrs**

Self study component: Residual stresses in wrought products

UNIT-II

FORGING & ROLLING: classification of forging processes. Forging machines & equipment. Expressions for forging pressures & load in open die forging and closed die forging by slab analysis, concepts of friction hill and factors affecting it, Die-design parameters. Material flow lines in forging. Forging defects, Residual stresses in forging. Simple problems. Classification of Rolling processes. Types of rolling mills, expression for Rolling load. Roll separating force. Frictional losses in bearing, power required rolling, Effects of front & back tensions, frictions, friction hill. Defects in rolled products. Numericals. **10Hrs**

Self study component: Safety issues in forging and rolling operations

UNIT-III

EXTRUSION & WIRE DRAWING: Types, Application, Variables in extrusion, Extrusion dies. Relationship between speed of extrusion and extrusion pressure. Special extrusion processes: Impact extrusion, hydrostatic extrusion, extrusion of brittle metals, Seamless Tube extrusion, Closed cavity extrusion, Powder extrusion. Metal flow pattern in extrusion with and without lubrication. Defects in extruded products. Analysis for extrusion force problems. Introduction to wire drawing, Drawing ratio, Steps in drawing operation Work done in homogenous deformation. Work formula for wire drawing. Max. Possible reduction of area per pass. Drawing equipment & dies, Drawing speed Vs wire diameter. Drawing stress Vs strain. Expression for drawing load by slab analysis. Power requirement. Redundant work and its estimation, optimal cone angle & dead zone formation, drawing variables, Numericals.

Self study component: Tube drawing process and classification of tube drawing

UNIT-IV

SHEET & METAL FORMING: Forming methods dies & punches, progressive die, compound die, combination die. Rubber forming. Open back inclinable press (OBI press), piercing, blanking, bending, deep drawing, LDR in drawing, Forming limit criterion, defects of drawn products, stretch forming. Roll bending & contouring, Sheet metal drawing process, types. Deep drawing, stresses in deep drawing, Numericals. **10Hrs**

Self study component: Safety aspects in forming operations.

UNIT-V

POWDER METALLURGY: Basic steps in Powder metallurgy brief description of methods of production of metal powders, Characteristics of powder. Conditioning and blending powders, Compaction and sintering. Sintering types, Mechanism of Sintering, Effect of sintering on structure and dimensional changes. Sintering furnaces, post sintering operations.

Application of powder metallurgy components, advantages and limitations.
PROCESSING OF PLASTICS AND CERAMICS: Introduction, types of plastics, Processing of rubber, elastomers and ceramics. **10Hrs**
Self study component: Health and safety issues in processing of plastics and rubber.

Course Outcomes

After learning all the units of the course, the student is able to;
1.**Describe** different metal working processes and its applications.
2.**Illustrate** metal working processes
3.**Analyse** stresses and strain rate in metal working processes
4.**Explain** powder **metallurgy** process.
5.**Discuss** processing of plastics and ceramics.

CO2	**Illustrate** metal working processes	**3**	**2**	**1**									**1**	-	-
CO3	**Analyse** stresses and strain rate in metal working processes	**3**	**2**	**1**									**1**	-	-
CO4	**Explain** powder metallurgy process.	**3**	**2**	**1**									**1**	-	-
CO5	**Discuss** processing of plastics and ceramics.	**3**	**2**	**1**									**1**	-	-

Course Title: **Metrology & Measurements laboratory**			
Course Code: **P17MEL47**	Semester: IV	L-T-P-H: 0-0-3-3	Credits: 1.5
Contact Period - Lecture: 36Hrs. Exam: 3Hrs.	Weightage: CIE: 50 %;		SEE: 50%

Course Objectives: The course aims at making students familiar with different measurement equipments and use of this in industry for quality inspection and safety.

Course Content

PART-A

Exp-1
Calibration of Pressure Gauge **1.5 Hrs**

Exp-2
Calibration of Thermocouple **1.5 Hrs**

Exp-3
Calibration of LVDT **3 Hrs**

Exp-4
Calibration of Load Cell **3 Hrs**

Exp-5
Use of Planimeter. **3 Hrs**

Exp-6
Measurements of alignment using Autocollimator / roller set **3 Hrs**

PART-B

Exp-7
Measurements of angle using Sine Center / Sine bar / Bevel protractor **3 Hrs**

Exp-8
Measurements of Screw thread Parameters using two wire and three-wire method. **3 Hrs**

Exp-9
Measurements using Profile Projector / Toolmaker's Microscope **3 Hrs**

Exp-10
Measurements of cutting tool forces using
a) Lathe tool Dynamometer
b) Drill tool Dynamometer **3 Hrs**

Exp-11
Measurements of Surface roughness using Tally surf/mechanical Comparator. **3 Hrs**

Seminar **3 Hrs**

Test **3 Hrs**

Reference Books

2.R. S. Sirohi and H. C. Radha Krishna, **"Mechanical Measurements,"** 3rd Edition, 1991, New Age International, ISBN: 978-8122403831.

Course Outcomes

After learning all the units of the course, the student is able to;
1.**Demonstrate** calibration of pressure gauge, thermocouple and LVDT
2.**Use** Vernier/Micrometer and Sine Center / Sine bar / bevel protractor for measurement of linear dimension and angular.
3.**Measure** the thread parameters using two wire or three-wire method.

4.**Use** tool makers microscope / profile projector for measurement of the thread parameters and tool wear

5.**Use** Tally surf/mechanical Comparator to Measure Surface roughness

Course Articulation Matrix

Course Outcomes		Program Outcomes												PSO

Course Title: **Basic Material Testing Laboratory**			
Course Code: **P17MEL48**	Semester: IV	L-T-P-H: 0-0-3-3	Credits: 1.5
Contact Period - Lecture: 36Hrs. Exam: 3Hrs.	Weightage: CIE: 50 %;		SEE: 50%

Course Objectives: To learn how to characterize and determine the basic mechanical properties and behaviors of engineering materials and to introduce variety of material testing equipments and techniques.

Course Content

PART-A

Exp-1

Tensile, Compression, Shear and Torsion tests on mild steel specimens using a Universal Testing Machine **6 Hrs**

Exp-2: Bending Test on mild steel, wooden specimens. **3 Hrs**

Exp-3

Preparation of specimen for metallographic examination of different engineering materials. Identification of microstructures of plain carbon steel, tool steel, grey CI, SG iron, Brass, Bronze and composites. **6 Hrs**

PART-B

Exp-4

Impact Tests: Izod and Charpy tests on mild steel specimens. **3 Hrs**

Exp-5

Hardness tests: Brinnell, Rockwell and Vickers's Hardness tests. **3 Hrs**

Exp-6

Heat treatment: Annealing, Normalizing, Hardening and Tempering of Ferrous alloys and study their Rock well's hardness. **6 Hrs**

Exp-7

Fatigue test- 4 point bending (Demonstration only) **3 Hrs**

Seminar **3 Hrs**

Test **3 Hrs**

Course Outcomes

After learning all the units of the course, the student is able to;

1.**Determine** the mechanical properties of material specimen.

2.**Prepare** material specimen for metallographic studies and **recognize** the micro structural features of material.

3.**Demonstrate** heat treatment of metal specimens.

4.**Demonstrate** 4 point bending fatigue test.

Course Title: **Aptitude and Reasoning Development - INTERMEDIATE (ARDI)**			
Course Code: **P17HU49**	Semester: IV	L-T-P-H: 0-0-2-2	Credits: 01
Contact Period - Lecture: 32Hrs.; Exam:3Hrs.	Weightage: CIE: 50 %;		SEE: 50%

Relevance of the course:

4th semester deals with more of quantitative aptitude. It is the intermediate level of aptitude which involves modules like Time speed distance. Time and work, set theory. This course also touches upon logical abilities through modules like cubes and Calendars.

Course Content

UNIT-I

Time, Speed and Distance:

Concept of motion and mathematical representation of motion, The rule of proportionality, Conversion between kmph to m/s, Concept of average speed and its application in different scenarios, Relative speed– Importance, application and observation in day to day life, same direction and opposite direction, An application of allegation in Time speed and distance, Trains– Different scenarios. Boats and streams– resultant speed, upstream and downstream concept. Circular motion– Two or three bodies meeting at the starting point or anywhere in the track. Races– Concept of head start, solving problems under different constraints. Application of solving problems under Clocks.

Self-study Component- Basic relation between the 3 different quantities. Conversions between different units of measurement. Speed and velocity. **6 hrs**

UNIT-II

Cubes, Clocks & Calendars:

Cubes: Number of faces, vertices and edges. Colored cubes. Number of colored faces and the formulae to find-out the same. Problems on cubes.

Clocks & Calendars: Minute spaces. Hour hand and minute hand. Angle between the hands. Relative speed. Faulty clocks. Time gained or lost by the clock. Odd days. Leap year. Ordinary year. Counting of odd days. Problems on clocks and calendars.

Self-study Component- Knowledge about shapes and dimensions, Area and volume. Leap year, number of days. Important dates. **8 Hrs**

UNIT-III

Set theory and Venn diagram: Set builder form, Tabular form, Venn diagram, Types of sets, Operation of sets using venn diagram, Important properties, Algebraic laws of sets, Maxima and minima in set operation, Venn diagram for four sets.

Syllogism: Meaning of syllogisms, Format of problems and standard qualifiers, Concept of distribution, Standard question pattern, Application of venn diagram to solve problems. **Logical Venn diagrams:** Analysis of the given problem and solve it.

Self-study Component- Basics about sets, operations using venn diagram. Basic applications.

6 Hrs

UNIT-IV

Geometry and Mensuration:

Theory, straight lines, triangles– theorems, area, lines inside triangle and geometric centre, Special property of an equilateral triangle, Application of Pythagoras theorem, Congruency and similarity of triangles, Basic proportionality theorem, Polygons, Quadrilaterals, Trapezium, Parallelogram, Rectangle, Rhombus, Square, Division of polygons, Circumscribed and Inscribed polygons, Concyclic points concept, Cyclic quadrilateral, Circle– Radius, Area and perimeter, Arc, Chord, Sector, Segment, Tangent, Secant, Area of common region Solid figures– Introduction, Classification of a solid, Net of a solid, Cuboid, Cube, Right cylinder, Pyramid– right pyramid, triangular pyramid, Cone– frustum of a cone, Sphere, Combination of solid.

Co-ordinate geometry:

Cartesian coordinate geometry– rectangular coordinate axis, distance formula, Section formula, Area of a triangle, Centre of gravity or Centroid of a triangle, In-centre of a triangle, Circumcentre of a triangle, Orthocentre of a triangle, Collinearity of three points, Slope of a line, Different forms of

equations of a straight line, Perpendicularity and parallelism, Length of perpendicular.
Self-study Component-Basics of geometry, formula, dimensions, shapes. Different types of lines. Example – parallel, intersecting etc… **8 Hrs**

UNIT-V

Time and Work:
Relationship between time and work. Importance of efficiency, Conventional method of solving problems, L.C.M method, Negative work, The specific case of building a wall, Group work, Constant product rule, When work is not constant, Pipes and cistern– Similarity of logic.
Self-study Component-LCM methods, basic arithmetic. Fractions and efficiency. **4 Hrs**

Reference Books

1.The Trachtenberg speed system of basic mathematics, published by Rupa publications.
2.CAT Mathematics by AbhijithGuha. published by PHI learning private limited.
3.Quantitative aptitude by Dr. R. S Agarwal, published by S.Chand private limited.
4.Verbal reasoning by Dr. R. S Agarwal , published by S. Chand private limited.
5.Quantitative aptitude for CAT by Arun Sharma, published by McGraw Hill publication.
6.Analytical reasoning by M.K Pandey BSC PUBLISHING.CO.PVT.LTD

Course Outcomes

After learning all the units of the course, the student is able to;
1.Solve problems of higher difficulty level with ease in the following topics– Time , speed and distance and Geometry. L5
2.Analyze the number of colored faces in a cube when it is cut into different number of pieces and solve the problems under clocks and calendars. L5
3.Apply the concept of L.C.M in the module time and work to solve the problems with comprehension. L2
4.Analyze the concepts in Co-ordinate geometry by spatial visualization. L4
5.Interpret the logic in the statements of syllogism by critical thinking and apply venn diagram for the effectives ways of deriving at the conclusion. L4
6.Determine the solutions for complicated problems of set theory using the concept of venn diagram. L4

Course Title: **Additional Mathematics-II** (Mandatory Learning Course: **Common to All Branches)** (A Bridge course for Diploma qualified students of III Sem. B. E.)			
Course Code: **P17MADIP41**	Semester: IV	L-T-P-H: 4-0-0-4	Credits: **NA**
Contact Period - Lecture: 52Hrs. Exam: 3Hrs.		Weightage: CIE: 50 %;	SEE: 50%

Course Content

UNIT-I

Linear Algebra: Introduction - Rank of matrix by elementary row operations - Echelon form of a matrix. Consistency of system of linear equations - Gauss elimination method. Gauss-Jordan and LU decomposition methods.Eigen values and eigen vectors of a square matrix. Application of Cayley-Hamilton theorem(without proof) to compute the inverse of a matrix-Examples. **10 Hrs**

UNIT-II

Higher order ODE's: Linear differential equations of second and higher order equations with constant coefficients. Homogeneous /non-homogeneous equations. Inverse differential operators.Solutions of initial value problems. Method of undetermined coefficients and variation of parameters. Solution of Cauchy's homogeneous linear equation and Legendre's linear differential equation. **14 Hrs**

UNIT-III

Multiple Integrals: Double and triple integrals-region of integration. Evaluation of double integrals by change of order of integration.

Vector Integration : Vector Integration :Integration of vector functions. Concept of a line integrals, surface and volume integrals. Green's, Stokes's and Gauss theorems (without proof) problems. Orthogonal curvilinear coordinates. **10 Hrs**

UNIT-IV

Laplace transforms: Laplace transforms of elementary functions. Transforms of derivatives and integrals**,** transforms of periodic function and unit step function-Problems only. Inverse Laplace transforms: Definition of inverse Laplace transforms. Evaluation of Inverse transforms by standard methods. Application to solutions of Linear differential equations and simultaneous differential equations. **12 Hrs**

UNIT-V

Probability: Introduction. Sample space and events. Axioms of probability. Addition and multiplication theorems. Conditional probability – illustrative examples. Bayes's theorem-examples. **06 Hrs**
