SYLLABUS

(With effect from 2024 -25)

ಪಠ್ಯಕ್ರಮ

(ಶೈಕ್ಷಣಿಕ ವರ್ಷ 2024-25)

**Bachelor Degree
In**
Mechanical Engineering

V & VI Semester

Out Come Based Education
With
Choice Based Credit System

[National Education Policy Scheme]

P.E.S. College of Engineering, Mandya - 571 401, Karnataka

*[An Autonomous Institution affiliated to VTU, Belagavi,
Grant – in – Aid Institution (Government of Karnataka),
Accredited by NBA (All UG Programs), NAAC and Approved by AICTE, New Delhi]*

ಪಿ.ಇ.ಎಸ್. ತಾಂತ್ರಿಕ ಮಹಾವಿದ್ಯಾಲಯ
ಮಂಡ್ಯ–571 401, ಕರ್ನಾಟಕ
(ವಿ.ಟಿ.ಯು, ಬೆಳಗಾವಿ ಅಡಿಯಲ್ಲಿನ ಸ್ವಾಯತ್ತ ಸಂಸ್ಥೆ)

Ph : 08232- 220043, Fax : 08232 – 222075,Web : www.pescemandya.org

VISION

"PESCE shall be a leading institution imparting quality Engineering and Management education developing creative and socially responsible professionals."

MISSION

➢ *Provide state of the art infrastructure, motivate the faculty to be proficient in their field of specialization and adopt best teaching-learning practices.*

➢ *Impart engineering and managerial skills through competent and committed faculty using outcome based educational curriculum.*

➢ *Inculcate professional ethics, leadership qualities and entrepreneurial skills to meet the societal needs.*

➢ *Promote research, product development and industry-institution interaction.*

QUALITY POLICY

Highly committed in providing quality, concurrent technical education and continuously striving to meet expectations of stake holders.

CORE VALUES

Professionalism
Empathy
Synergy
Commitment
Ethics

About Department of Mechanical Engineering

The Department of Mechanical Engineering was established in the year 1962 during the origination of the institute. The department was granted academic autonomy in the year 2009. The department presently offers B.E in Mechanical Engineering, M Tech in Machine Design, M.Sc., (Engg.) by research and research leading to Ph.D. The present intake capacity of the department is 120 for BE, 24 for M Tech Machine Design. The department has a faculty-student ratio of 1:20 for UG courses and 1:12 for PG courses. The department has well established laboratories to meet the academic requirements of UG and PG programmes and a skilled technical faculty to train the students. The department has its own library which has a collection of about 4600 reference books. The department is accredited with NBA for 3Years in 2019. The department regularly organizes industrial visits, technical talk by experts from industries and institutes in contemporary areas to bridge the gap between syllabi and current corporate developments. The students are encouraged to undergo industrial training as well as to take up industry oriented projects during their academic course. Mechanical Engineering Association (MEA), formed by the students and faculty of the department regularly organizes co-curricular and extracurricular activities for the students.

Department Vision

"Be a department well recognized for its ability to develop competent mechanical engineers capable of working in global environment"

Department Mission

The Mission of the Department of Mechanical Engineering is to:

- Provide quality education by competent faculty.
- Provide adequate infrastructure and learning ambience for the development of essential technical skills.
- Inculcate a sense of higher education and research orientation.
- Foster industry interaction.

Program Educational Objectives (PEOs)

The Department of Mechanical Engineering has formulated the following programme educational objectives for the under-graduate program in Mechanical Engineering:

The Mechanical Engineering graduates will be able to:

PEO1: Use the fundamentals of basic science, mathematics and mechanical engineering, to pursue their career as engineers as well as to lead and manage teams in global organizations.

PEO2: Pursue advanced education, research and development and engage in the process of life-long learning.

PEO3: Become entrepreneurs in a responsible, professional and ethical manner to serve the society.

Program Specific Outcomes (PSOs)

Engineering graduates should be able to:

PSO1: Apply conceptual knowledge with practical engagement that has real life problems by integrating different domains of mechanical engineering.

PSO2: Utilize the modern tools and emerging technologies with technical skills to design, develop and analyse mechanical systems through multidisciplinary approach.

Program Outcomes (POs)

Engineering Graduates will be able to:

1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

MANAGEMENT, ENTREPRENEURSHIP AND PROFESSIONAL ETHICS			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – V			
Course Code: P22ME501		**L-T-P: 3-0-0**	**Credits: 03**
Contact Period-Lecture: 40 Hrs.	**Exam: 3 Hrs.**	**Weightage: CIE: 50 %;**	**SEE: 50%**

Course Learning Objectives:

The objectives of this course are to,

Enable the students to understand the basic concepts of Management, Entrepreneurship, and Organization.

Provide complete insight regarding the various organizational behavior, professional ethics, personality traits and stress management.

Course Content

UNIT-I

Introduction: Management -Introduction, Meaning, Evolution of Management Thought, Nature, Objectives, Importance, Difference between Administration and Management, Levels of Management, Functions of Management, **Planning-** Definition, Features, Importance of planning, **Organization structure**-Definitions, Importance, Principles, Organization Chart, Span of Control, Centralization and Decentralization of Authority. **Directing-**Definitions, Importance, Principles of Directing, **Controlling-** Definitions, Need of Controlling, Types of Control, Control Techniques**.**

8 Hrs

Self-Study Component: Steps in the Controlling Process.

UNIT-II

Entrepreneurship: Meaning of Entrepreneur, Evolution of Entrepreneur concept, Characteristics of Entrepreneur, Functions of Entrepreneur, Types of entrepreneur, Stages in entrepreneurial process, Role of entrepreneurs in economic development of country, barriers to entrepreneurship. **Business Organizations and Business Environment:** Introduction to various form of business organization, sole proprietorship, partnership, corporations, Limited Liability, company, Liberalization, Privatization and Globalization in India. Intellectual Property Rights (IPR), Types of IPRs.

8 Hrs

Self-Study Component: Development of Entrepreneurship in India. Support for MSME, Women empowerment by state and central financial intuitions.

UNIT-III

Organizational Behavior: Introduction, Definitions, Nature, Goals, Importance, Approaches to Organizational, **Attitude-** Meaning, Definition, Types, Components, Attitudes and Behaviour, Changing Attitudes in the Workplace; **Perception-**Perception, Perceptual Process, Factors Influencing Perception; **Personality-**Definitions, Factors Influencing Personality, Personality Traits, Personality Tools and Tests; **Motivation-**Definitions, Process of Motivation (Cycle of Motivation), Nature, Importance, Types, X and Y theories of Motivation.

8 Hrs

Self-Study Component: Decision-making, steps in Decision-making.

UNIT-IV

Organizational Culture- Definitions of Organizational Culture, Strong v/s Weak Culture, Characteristics, Types, Levels, Dimensions, Creating Organizational Culture, Changing Organizational Culture. **Group Dynamics-** Meaning of Group, Group Characteristics, Classification of Groups, **Group Behavior,** Impact of Group on Individual's Behaviour, Impact of External Factors on Group Behaviour. **Teamwork-** Nature of Teams, Team Characteristics, Teams Versus Groups, Teamwork, Processes of Teamwork, Creating Effective Teams.

8 Hrs

Self-Study Component: Types of Teams and Reasons for Team Failure, Concepts of Leadership.

UNIT-V
Change and Stress Management: Change- Nature, Characteristics, Process, Forces Responsible for Change in Organizations, Resistance to Change, **Stress Management-**Definitions, Understanding Stress, Relation between Stress and Performance, Level, Signs and Symptoms of Stress, Types of Stress, Causes of Stress, Managing Stress. **8 Hrs**
Self-Study Component: Managing Resistance to Change, Institutional support and government schemes.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Apply** fundamentals of Industrial Management, Entrepreneurship and Professional Ethics, concepts for stress management.	Applying	L3
CO2	**Apply** the knowledge in Development of Entrepreneurship, structurization of organization.	Applying	L3
CO3	**Analyze** appropriate Organizational Culture and Group Behavior.	Analyzing	L4
CO4	**Make use of** Organization Behaviour and Stress Management as an individual or as a team member for effective communication and working environment.	Applying	L3

DESIGN OF MACHINE ELEMENTS-I [As per Choice Based Credit System (CBCS) & OBE Scheme] **SEMESTER – V**			
Course Code: P22ME502	**L-T-P: 3-0-0**		**Credits: 03**
Contact Period-Lecture: 40 Hrs.	**Exam: 3 Hrs.**	**Weightage: CIE: 50 %;**	**SEE: 50%**

Course Learning Objectives:

The objectives of this course are to,

- Understand the basic concepts of Machine elements and its functions.
- Understand basic procedures in machine design.
- Apply the standard material properties and codes in designing machine elements.
- Design some of the commonly used machine elements.

<div align="center">

Course Content

</div>

<div align="center">

UNIT-I

</div>

Basic design concept: Introduction, designation of Engineering Materials, design considerations, Basic procedure of design of machine elements, factor of safety, criteria for selection of factor of safety, design of simple machine members subjected to static loading (including eccentric load and limited to biaxial stresses). **Theories of failure:** Maximum normal stress theory, Maximum shear stress theory, Distortion energy theory and simple numerical. **Stress concentration:** Stress concentration factor, design of simple elements with stress raisers.

8 Hrs

Self study component: Maximum strain theory [St.Venant's theory] of failure and brittle/ductile fracture.

<div align="center">

UNIT-II

</div>

Design against fatigue load: Introduction, types of fluctuating stresses, Low cycle fatigue, High cycle fatigue, Rotating beam bending test, S-N Diagram, endurance limit, endurance limit modifying factors: load, size and surface factors, Stress concentration effects; notch sensitivity, design for infinite life, combined steady and variable stress, Soderberg and Goodman relationship, stresses due to combined loading. **Impact loading:** Impact stresses due to axial load.

8 Hrs

Self study component: Impact stresses due to bending load.

<div align="center">

UNIT-III

</div>

Design of shafts: Introduction, shafts and axles, transmission shafts subjected to combined bending and twisting (solid shafts only) based on strength and torsional rigidity, ASME code for shaft design. Design of Muff coupling and rigid flange coupling.

8 Hrs

Self study component: Design against lateral rigidity.

<div align="center">

UNIT-IV

</div>

Threaded joints: Introduction, Stresses in threaded fasteners due to static loading, elastic analysis of bolted joints, initial tension in bolts, eccentrically loaded threaded joints. **Power screws -** Introduction, Types of screw threads, Design of Power Screws, efficiency, self-locking and over hauling.

8 Hrs

Self study component: Differential and compound screws.

<div align="center">

UNIT-V

</div>

Riveted joints – Introduction, methods of riveting, Types of rivets, rivet materials, types of riveted joints, failures of riveted joints, joint efficiency, design of boiler Joints. **Welded joints -** Introduction, types of welded joints, design of welded joints (butt joints, fillet welds).

8 Hrs

Self study component: Diamond or Lozenge joint.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Apply** the basic design concept in static, impact and fatigue loading conditions.	Applying	L3
CO2	**Analyse** the static and fatigue failure theories and stresses induced in machine elements subjected to various loading conditions.	Analyzing	L4
CO3	**Design** transmission elements, power screw and **analyse** for safe design.	Applying	L3
CO4	**Design** the permanent and temporary joints for structural applications and **analyse** the same for safe design.	Applying	L3

THEORY OF ELASTICITY			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – V			
Course Code: P22ME5031	**L-T-P: 3-0-0**		**Credits: 03**
Contact Period-Lecture: 40 Hrs.	**Exam: 3 Hrs.**	**Weightage: CIE: 50 %;**	**SEE: 50%**

Course Learning Objective:

The objective of this course is to understand the mathematical and physical principles of Elasticity, with different solution strategies while applying them to practical cases.

Course Content

UNIT-I

Stress Analysis: Introduction to the general theory of elasticity, assumptions and applications of linear elasticity. Stress tensors, state of stress at a point, principal stresses, direction cosines, stress invariants, equilibrium equations, Construction of Mohr Circle for 2D stress systems.

8 Hrs

Self-study component: Mohr's circle for 3D stress system

UNIT-II

Strain Analysis: Deformation, strain-displacement relation, strain components, The state of strain at a point, principal strains, strain invariants, Equations of Compatibility for Strain, cubical dilation.

8 Hrs

Self-study component: Mohr's circle for strain system

UNIT-III

Stress–Strain Relations: Generalized Hooke's law in terms of engineering constants. Existence and uniqueness of solution, Saint Venant's principle, principle of superposition, Prandtl's membrane analogy, Kirchhoff's law, Fundamental boundary value problems, Inverse and Semi-inverse method of solving elasticity problems. General case of Plane stress and Plane strain, transformation of compatibility condition from strain component to stress components. Relation between plane stress and plane strain.

8 Hrs

Self-study component: Theorem of Virtual work

UNIT-IV

2D Problems in Cartesian Coordinates: Airy stress function, stress function for plane stress and plane strain case. Investigation for simple beam problems. Bending of narrow cantilever under end load, simply supported beam with uniform load using polynomials.

8 Hrs

Self-study component: Cauchy integral theorem

UNIT-V

Stress analysis in Axisymmetric body: Stresses in rotating Thick-walled cylinder subjected to internal and external pressures, shrink fit. **Torsion** of circular and elliptical bars, stress function, torsion of thin walled and multiple cells closed sections.

8 Hrs

Self-study component: Torsion of general prismatic bar

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Apply** the concept of stress strain in solving elasticity problems.	Applying	L3
CO2	**Apply** the concepts of basic engineering mathematics in obtaining the expressions for stress strain in 2D system and in axisymmetric body.	Applying	L3
CO3	**Analyse** the structural member like shafts, beams and cylinders subjected to torsion, bending and pressure respectively.	Analyzing	L4
CO4	**Analyse** the 2D problems in Cartesian co-ordinate system.	Analyzing	L4

NON TRADITIONAL MACHINING			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – V			
Course Code: P22ME5032		**L-T-P: 3:0:0**	**Credit: 03**
Contact Period: Lecture: 40 Hrs	**Exam: 3 Hrs**	**Weightage : CIE- 50%, SEE-50%**	

Course Learning Objectives:

The objectives of this course are to,

- Understand the need and characteristics of nontraditional machining processes.
- Prepare students for industries that require advanced machining capabilities, such as aerospace, defence, sports, automotive and medical device manufacturing.

Course Content

UNIT-1

Introduction to Non-traditional Machining Processes: Need for nontraditional machining processes, process selection, classification, comparison between conventional and non-conventional machining process. **Ultrasonic Machining**: Working principle, mechanism of metal removal, tool feed mechanism, effect of process parameters, advantages, disadvantages and applications.

08 Hrs

Self study component: Principle of micro machining and its application.

UNIT-2

Abrasive Jet Machining: Working principle, effect of process parameters, advantages, disadvantages and applications. **Electric Discharge Machining (EDM)**: Working principle, mechanism of metal removal, basic EDM circuitry, spark erosion generators, analysis of relaxation type of circuit, material removal rate in relaxation circuits, critical resistance parameters in Ro circuit, die electric fluids, electrodes for spark erosion, surface finish, applications, pollution and safety issues.

08 Hrs

Self study component: Principle and applications of Abrasive water jet machining.

UNIT-3

Chemical Machining: Introduction, fundamental principle, maskants, etchants, process characteristics, advantages, disadvantages, applications and environmental issues. **Electrochemical Machining (ECM):** Introduction, working principle, chemistry of the ECM process, classification of ECM, effect of process parameters, determination of the metal removal rate, dynamics of ECM process, polarization, tool design, working principles of electro chemical grinding, electro chemical honing, electrochemical deburring.

08 Hrs

Self study component: Advantages, disadvantages and applications of electrochemical machining

UNIT-4

Laser Beam Machining: Introduction, principle of generation of laser, equipment and machining procedure, types of lasers, process characteristics, advantages, limitations and applications. **Ion Beam Machining:** Introduction, working principle, mechanism of metal removal, associated equipment, process characteristics, safety issue and applications.

08 Hrs

Self study component: Advantages and disadvantages of Ion beam Machining

UNIT-5

Plasma Arc machining: Introduction, working principle, mechanism of metals removal, process parameters, process characteristics, types of torches and applications. **Electron Beam machining:** Introduction, working principle, thermal & non thermal type, process characteristics, applications and safety issues.

08 Hrs

Self study component: Safety precautions of plasma arc machining.

Course Outcomes:
At the end of the course, students will be able to,
1.   **Apply** the principles, processes, and techniques of non-traditional machining methods.
2.   **Compare** and selection of non-conventional machining processes for suitable   applications.
3.   **Apply** the concepts and techniques learned in the course to solve real-technical manufacturing problems and analyse the economic and environmental issues.
4.   **Analyse** the process parameters and characteristics of operating specialized equipment's of non-traditional machines.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Apply** the principles, processes, and techniques of non-traditional machining methods.	Applying	L3
CO2	**Compare** and selection of non-conventional machining processes for suitable applications.	Understanding	L2
CO3	**Apply** the concepts and techniques learned in the course to solve real-technical manufacturing problems and analyse the economic and environmental issues.	Applying	L3
CO4	**Analyse** the process parameters and characteristics of operating specialized equipment's of non-traditional machines.	Analyzing	L4

AIRCRAFT AND ROCKET PROPULSION		
[As per Choice Based Credit System (CBCS) & OBE Scheme]		
SEMESTER – V		
Course Code: P22ME5033	**L-T-P:3-0-0**	**Credits: 03**
Contact Period -Lecture: 40 Hrs.	**Exam: 3Hrs.**	**Weightage:CIE:50%; SEE:50%**

Course Learning Objectives:
The objectives of this course are to,
- Describe the fundamental components and working of air breathing propulsive devices and rocket engines.
- Apply the thermodynamic concepts to determine the performance parameters of turbojet and rocket engines.

Course Content

UNIT-I
Aircraft Propulsion: Review of thermodynamic principles, aerospace propulsion, principle of jet propulsion, aircraft component nomenclature, Classification of propulsive devices: basic working of Airscrew, Turbojet, Turboprop, Turbofan: bypass ratio, multispool technology, Turboshaft, Ramjet, Turboramjet and Scramjet engines.

7 Hrs

Self-study component: Types of military aircrafts

UNIT-II
Theory of propulsion: Performance parameters: Thrust, general thrust equation, thrust power, thrust specific fuel consumption, propulsive efficiency and thermal efficiency of turbojet engine. Energy flow diagram of turbojet engine. Simple numericals on the performance parameters of turbojet engines. Component efficiencies of turbojet engine. Ideal and actual turbojet engine cycle. Thermodynamic analysis of turbojet engine, Simple numericals. Thrust augmentation: After burning (description only).

8 Hrs

Self-study component: Propellers: nomenclature, terminology and types

UNIT-III
Jet engine Components: Basic description of jet engine components: Intake-Subsonic (description only). Axial flow compressor: basic requirement in aircraft, construction and working. Axial flow turbines: construction and working, blade materials, need and types of blade cooling: Combustion chamber: requirements of the combustion chamber, the process of combustion, types of gas turbine combustion chambers. Nozzles: (description only) Convergent nozzle.

9 Hrs

Self-study component: Inlets and nozzles of supersonic military aircrafts

UNIT-IV
Rocket propulsion: Chemical Rockets: general operating principle Classification, performance parameters for chemical rockets and their relationships, energy and efficiencies. Simple numericals on performance parameters of chemical rockets. Solid propellant rockets: working, solid propellants: characteristics, classification, burning rate, grain configurations, typical fuels and oxidizers, properties, igniters. Comparison of air breathing and rocket propulsion.

8 Hrs

Self-study component: Types of missiles

UNIT-V
Rocket Engines: Basic description of liquid and hybrid propellant rocket systems: Liquid propulsion rockets, feed systems, gas pressure feed system, turbo pump feed system, injectors, types of injectors, liquid propellants, cooling of rocket motors Hybrid propellant rockets, propellant oxidizer configurations. Flight Performance: rocket equation, altitude gain in simplified vertical rocket, staging of rockets.

8 Hrs

Self-study component: Space launch vehicles

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator	
CO1	**Apply** the knowledge of thermodynamics to describe the working of air breathing and rocket engines.	Applying	L3	
CO2	**Apply** the basic principles of thermodynamics and fluid mechanics to describe the working of aircraft engine components.	Applying	L3	
CO3	**Analyze** the performance of air breathing engine and its components.	Analyzing	L4	
CO4	**Analyze** the working and performance of rocket engines.	Applying	L3	

Course Title: **DESIGN OF EXPERIMENTS**			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – V			
Course Code: **P22ME5034**	Semester: V	L-T-P:2-2-0	Credits: 03
Contact Period -Lecture: 40 Hrs.	Exam: 3Hrs.	Weightage:CIE:50%; SEE:50%	

Course Learning Objectives:

The objectives of this course are to,

- Plan design analysis and conduct experimental investigations efficiently and effectively.
- Choose appropriate experiment parameters for practical applications.

Course Content

UNIT-I

Introduction: Need for research, design of experiments, terminologies-Response, factor, level and replication, experimental design techniques, strategy of experimentation, typical applications of experimental design- marketing, production, finance and personnel. Basic principles of design of experiments.

8 Hrs

Self Study Component: Guidelines for designing experiments.

UNIT-II

Basic statistical concepts: Concepts of random variable, probability, density function, cumulative distribution function, sample and population, measure of central tendency, mean median and mode, measures of variability, concept of confidence level. Statistical distributions: normal, log normal and weibull distributions. Probability plots, choice of sample size. Illustration through numerical examples.

8 Hrs

Self Study Component: Hypothesis testing.

UNIT-III

Experimental design: Classical experiments, Factorial experiments, interactions, treatment combination, randomization. Two-level experimental designs for two factors and three factors. Three-level experimental designs for two factors and three factors, factor effects, factor interactions, fractional design, saturated designs. Illustration through Numerical examples.

8 Hrs

Self Study Component: Central composite designs.

UNIT-IV

Analysis and interpretation methods: Measures of variability, ranking method, column effect method &plotting method, Analysis of Variance (ANOVA) in Factorial Experiments: YATE's algorithm for ANOVA, regression analysis, and mathematical models from experimental data. Illustration through Numerical examples.

8Hrs

Self Study Component: Case study on ANOVA, Grey relational analysis.

UNIT-V

Experiment design using Taguchi's orthogonal arrays: Types of orthogonal Arrays, selection of standard orthogonal arrays, linear graphs and interaction assignment, dummy level technique, compound factor method, modification of linear graphs. Illustration through Numerical examples.

8 Hrs

Self Study Component: Robust parameter design using response surface methodology.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Apply** the fundamental concepts with mathematical knowledge, methodologies to bring knowledge of Design of Experiments.	Applying	L3
CO2	**Apply** a wide range of problems between the purpose of a model and the appropriate level of complexity.	Applying	L3
CO3	**Choose** an appropriate experiment to **analyze** a new product design or process improvement through experimentation strategy.	Understanding	L2
CO4	**Analyze** the nature of variable, statistical inference, influence parameter selection, factorial concepts, conduct design of experiments.	Applying	L3

P.E.S. College of Engineering, Mandya
Department of Mechanical Engineering

THEORY OF MACHINE- I (Integrated) [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – V		
Course Code: P22ME504	**L-T-P: 2-2-2**	**Credits: 04**
Contact Period-Lecture: 40 Hrs. Practical: 24 Hrs.	**Exam: 3 Hrs.**	**Weightage: CIE: 50 %; SEE: 50%**

Course Learning Objective:

The objective of this course is to understand the basic concepts and the working principles of simple planar mechanisms, gears, cams and enabling them to understand the kinematic and dynamic analyses of simple planar mechanisms.

Course Content

UNIT-I

Introduction to Mechanisms: Introduction, Rigid and Resistant bodies, kinematic pairs, degrees of freedom (without numerical), Grubler's criterion, Kinematic chain, mechanism, machine and structure. Mobility of Mechanisms, Inversions of mechanisms: Four bar chain, Single slider crank chain and Double slider crank chain. **Simple Mechanisms:** Intermittent motion mechanisms- Geneva mechanism, Ratchet and pawl mechanism. Peaucelliar's Straight line mechanism, Toggle mechanism, Pantograph, Ackerman steering mechanism, Davis steering gear mechanism.

8 Hrs

Self-study component: Working principle and application of universal joint.

UNIT-II

Velocity analysis of mechanisms: Introduction, vectors, addition and subtraction of vectors, absolute and relative motions, motion of a link, velocity analysis of a link by relative velocity method, velocity analysis of four-bar mechanism, slider-crank mechanism and crank and slotted lever mechanism by relative velocity method.

8 Hrs

Self-study component: Instantaneous centre, Kennedy's theorem.

UNIT-III

Static force analysis: Introduction, Static equilibrium, Equilibrium of two force, three force and four force members, Members with two forces and torque, Free body diagrams, Static force analysis (graphical) of four bar mechanism and slider-crank mechanism without friction.

8 Hrs

Self-study component: Principle of Virtual work.

UNIT-IV

Gears and Gear trains: Classification & application of different types of gears, Spur Gear terminology, Simple gear trains, Compound gear trains, Reverted gear trains, Epicyclic gear trains, Tabular method of finding velocity ratio of epicyclic gear trains. Estimation of Tooth load and torque in epicyclic gear trains. **Governors:** Introduction, Types, working principle and application [without numerical].

8 Hrs

Self-study component: Application and limitations of different types of gears.

UNIT-V

Cams: Types of cams, types of followers, Types of follower motion - SHM, Uniform velocity, uniform acceleration and retardation and Cycloidal motion. Displacement, Velocity and acceleration of follower for different types of motion; Displacement diagram for follower motion, Construction of cam profiles - Disc cam with reciprocating follower having knife-edge, roller and flat –faced follower.

8 Hrs

Self-study component: Applications of different types of cams.

Practical Content

24 Hrs

1. To find area of complex shape by using Planimeter.

2. To find the gear ratio using simple and compound gear trains.
3. To find centrifugal force and plot speed v/s lift for Watt governor.
4. To find centrifugal force and plot speed v/s lift for Porter governor.
5. To find centrifugal force and plot speed v/s lift for Proell governor.
6. To find centrifugal force and plot speed v/s lift for Hartnell governor.
7. To find valve timing diagram by using disc cam.
8. Demo of Steering mechanism.
9. Demo of Oldham's, Quick return motion, Elliptical trammel, Ratchet and Pawl mechanism.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Apply** the basic concepts of mechanical elements like links, chains, gears and cams in understanding the construction and working of mechanisms.	Applying	L3
CO2	**Apply** the basic concepts in understanding, degrees of freedom in different mechanisms and working principles of governors.	Applying	L3
CO3	**Analyze** the gear trains, static force, velocity in four bar and slider crank mechanisms, and **develop** cam profile for various follower motion.	Analyzing	L4
CO4	**Make use of** experimental data for writing a report as an individual or as a team member to **communicate** effectively.	Applying	L3

MECHATRONICS AND MICROPROCESSOR
[As per Choice Based Credit System (CBCS) & OBE Scheme]
SEMESTER – V

Course Code: P22ME505		L-T-P: 3-0-0	Credits: 03
Contact Period-Lecture: 40 Hrs.	Exam: 3 Hrs.	Weightage: CIE: 50 %;	SEE: 50%

Course Learning Objective:
The objective of this course is to understand the basic concepts of Mechatronics, Mechatronic products and their applications, Different Electrical and Mechanical actuation systems, Signal condition process, Basic concepts of Microprocessor and data representation using different number systems.

Course Content

UNIT-I

Introduction: Introduction to Mechatronics systems, measurement systems, control systems, Open & Closed loop control systems, basic elements of closed loop control system, sequential controllers, programmable logic controller (PLC), examples of mechatronic systems, the digital camera and autofocus, engine management system, classification of sensors, light sensors, Tactile sensors, inputting data by switches, their merits and demerits, Hall – effect sensors, eddy-current Proximity sensors, selection of sensors.

8 Hrs

Self-study component: Vetronics, Bio-mechatronics, Smart manufacturing (Industry 4.0)

UNIT-II

Electrical actuation systems: Electrical systems, Mechanical switches, relays, solid state switches, diodes, thyristors and triacs, bipolar transistors, power MOSFETS, solenoids, DC motors, brush type (permanent magnet) DC motors, brush type DC motors with field coils, brushless permanent magnet DC motors, AC motors, stepper motors, stepper motors specifications.

8 Hrs

Self-study component: Control of brush type d. c motors, stepper motor control.

UNIT-III

Signal conditioning: Signal conditioning processes, Operational amplifiers, inverting and non- inverting operational amplifiers, protection, filtering, wheat stone bridge, Digital signals, Analog to Digital Conversion, sampling theorem, digital to analog conversion, Multiplexers, Data Acquisition system, pulsed modulation.

8 Hrs

Self-study component: Digital signal processing, summing & Differential Amplifiers

UNIT-IV

Introduction to Microprocessor: Evolution of Microprocessor, Organization of Microcomputer, Microprocessor programming, instructions, machine and mnemonics codes, machine, assembly and High level language programming, organization of the 8085 and 8086, data and address busses, addressing the I/O devices, registers in the 8085 and 8086, instruction set of the 8085 and 8086. **Number System:** Positional number system, binary number system, octal number system, decimal number system, Hexadecimal number system, conversion from one number system to another, negative number representation, representation of floating-point numbers, accuracy and range in floating point numbers.

8 Hrs

Self-study component: Selecting a micro controller, Applications of Micro controlling

UNIT-V

Industrial Automation Techniques: Automated Guided Vehicle Systems. Micro Electro Mechanical Systems (MEMS), Automated Storage Systems: Storage System Performance, Automated Storage/Retrieval Systems, Work-in-process Storage, Product identification system: Barcode, Radio Frequency Identification (RFID), Design for Automated Assembly, Types of Automated Assembly Systems. Different control technologies in automation, Inspection and testing, Automated Inspection Principles and Methods, Sensor Technologies for Automated Inspection, Coordinate Measuring Machines,

Other Contact Inspection Methods, Machine Vision, Other optical Inspection Methods.

8 Hrs

Self-study component: Basics of Arduino & Raspberry Pai, Types of automation.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Apply** the basic concepts of different elements used in mechatronics system in understanding the various types of transducers, actuators, sensors and their applications and signals and processing.	Applying	L3
CO2	**Apply** the principles of mechatronics and automation for the development of productive and efficient manufacturing systems.	Applying	L3
CO3	**Apply** the concepts of number systems and data representation in microprocessor programming and interfacing.	Applying	L3
CO4	**Analyze** the mechatronic systems by considering the interaction between mechanical components, sensors, actuators, and control systems.	Analyzing	L4

ENERGY CONVERSION LABORATORY
[As per Choice Based Credit System (CBCS) & OBE Scheme]
SEMESTER – V

Course Code: P22MEL506	**L-T-P:0-0-2**	**Credits:01**
Contact Period-Lecture: 30 Hrs.	**Exam: 3 Hrs.**	**Weightage%: CIE:50; SEE:50**

Course Learning Objectives:
 The objectives of this course are to,
• Practically determine the thermal and physical properties of fuels and lubricant oils.
• Evaluate the performance of four stroke internal combustion engines.

Course Content

PART-A

15 Hrs

ments on Fluid Properties

Expt.-1: Determination of Flash point and Fire point of lubricating oil using Cleveland Open-Cup Apparatus.

Expt.-2: Determination of Viscosity of lubricating oil using Redwoods, Say bolts and Torsion Viscometers.

Expt.-3: Determination of Calorific value of solid fuel using Lewis Thomson calorimeter.

Expt.-4: Determination of Calorific value of gaseous fuels using Junkers Gas calorimeter.

Expt.-5: Determination of thermal conductivity of liquids.

PART-B

15 Hrs

ments on Performance Parameters

Expt.-6: Performance test on Four Stroke Diesel Engine.

Expt.-7: Performance test on Four Stroke Petrol Engine.

Expt.-8: Morse test on Multi Cylinder Engine.

Expt.-9: Preparation of biodiesel and to determine the performance parameters using diesel engine test rig.

Internship - II [As per Choice Based Credit System (CBCS) & OBE Scheme] **SEMESTER – V**			
Course Code:	**P22INT507**	**Credits:**	**02**
Teaching Hours/Week (L:T:P)	**0:0:0**	**CIE Marks:**	**-**
Total Number of Teaching Hours:	**-**	**SEE Marks:**	**100**
All the students registered to III year of BE shall have to undergo a mandatory internship of 04 weeks during the vacation of IV semesters in industrial/Govt./NGO/MSME/Rural Internship/Innovation/Entrepreneurship/AICTE Intern Shala/College Partnered Industries. A Semester End Examination (Presentation followed by Question Answer session) shall be conducted during V semester and the prescribed credit shall be included in the V semester grade card. The internship shall be considered as a head of passing and shall be considered for the award of degree. Those, who do not take up/complete the internship shall be declared fail and shall have to complete during subsequent Semester End Examination after satisfying the internship requirements. (The faculty coordinator or mentor has to monitor the students' internship progress and interact to guide them for the successful completion of the internship.) **Internship-II:** SEE component will be the only seminar/Presentation and question answer session			

EMPLOYABILITY ENHANCEMENT SKILLS - V			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – V for Civil, Mech, IP & Automobile Branches only			
Course Code:	P22HSMC508A	**Credits:**	01
Teaching Hours/Week (L:T:P)	0:2:0	**CIE Marks:**	50
Total Number of Teaching Hours:	30	**SEE Marks:**	50

Course Learning Objectives: This course will enable the students to:

- Calculations involving Time and work, Speed & distance, trains, boats and streams and races.
- Explain concepts behind logical reasoning modules of clocks and calendars.
- Develop problem solving skills through Python language.

UNIT – I		06 Hours

Quantitative Aptitude: Time and Work, Time, Speed and Distance.

Logical Reasoning: Clocks and Calendars.

Self-study component:	Decimal fractions

UNIT – II		06 Hours

Quantitative Aptitude: Trains, Boats and Streams, Races.

Verbal Ability: Reading Comprehension, Critical Reasoning.

Self-study component:	Game based assessments

UNIT – III	**PROBLEM SOLVING USING PYTHON - I**	06 Hours

Basic Programming: Factorial of a number, Simple interest, Armstrong Number, n-th Fibonacci number, check if a given number is Fibonacci number, sum of first n natural number, counting the digits in a number, Find out How many 1 and 0 in a Given Number, convert seconds into Hours and Minutes in Python, Check Whether a Given Number is Perfect Number, Print All Possible Combinations of Three Digits, Print Numbers in a Range Without using Loops

Arrays: Kth largest and Kth smallest number in an array, Sort the array of 0s, 1s, and 2s, Find the missing integer, find duplicates in an array, Find the occurrence of an integer in the array, find the GCD of the array, find remainder of array multiplication divided by n.

Self-study component:	Dictionary Programs

UNIT – IV	**PROBLEM SOLVING USING PYTHON - II**	06 Hours

String Programs: Check if a string is palindrome or not, Convert Snake case to Pascal case, remove i'th character from string in Python, Reverse words in a given String in Python, Replace duplicate Occurrence in String, String slicing in Python to rotate a string.

Self-study component:	Tuple Programs

UNIT – V	PROBLEM SOLVING USING PYTHON - III	06 Hours

List Programs: Interchange first and last elements in a list, find N largest elements from a list, print all even numbers in a range, Remove empty List from List, Count occurrences of an element in a list, Sum of number digits in List, convert a List to String, Test if List contains elements in Range, print duplicates from a list of integers.

Set Programs: Find common elements in three lists using sets, convert set into a list, Get Only unique items from two sets, return a set of elements present in Set A or B, but not both, check if two sets are equal.

Self-study component:	Set operators using Python

Course Outcomes: On completion of this course, students are able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	Solve the problems based on Time and work, Speed & distance, trains, boats and streams and races.	Applying	L3
CO2	Solve logical reasoning problems based on Clocks and calendars and verbal ability skills of reading comprehension and critical reasoning.	Applying	L3
CO3	Apply suitable programming constructs of Python language and / or suitable data structures to solve the given problem.	Analyzing	L4
CO4	Design and Develop solutions to problems using functions.	Analyzing	L4

Social Connect and Responsibility
[As per Choice Based Credit System (CBCS) & OBE Scheme]
SEMESTER – V

Course Code:	P22UHV509	Credits:	01
Teaching Hours/Week (L:T:P):	1:0:0	CIE Marks:	100
Total Number of Teaching Hours:	25+5	SEE Marks:	--

Course Outcomes: This course will enable the students to:

- **Identify** the needs of the community and involve them in problem solving.

- **Demonstrate** the knowledge about the culture and societal realities.

- **Develop** sense of responsibilities and bond with the local community.

- **Make use** of the Knowledge gained towards significant contributions to the local community and the society at large.

- **Develop** among themselves a sense of social & civic responsibility & utilize their knowledge in finding practical solutions for individual and community problems.

PART-I	

Plantation and adoption of a tree: Plantation of a tree that will be adopted for four years by a group of BE / B.Tech students. (ONE STUDENT ONE TREE) They will also make an excpert either as a documentary or a photo blog describing the plant's origin, its usage in daily life, its appearance in folklore and literature – Objectives, Visit, case study, report, outcomes.

PART-II	

Heritage walk and crafts corner: Heritage tour, knowing the history and culture of the city, connecting to people around through their history, knowing the city and its craftsman, photo blog and documentary on evolution and practice of various craft forms - – Objectives, Visit, case study, report, outcomes.

PART-III	

Organic farming and waste management: Usefulness of organic farming, wet waste management in neighboring villages, and implementation in the campus.

PART-IV	

Water conservation: Knowing the present practices in the surrounding villages and implementation in the campus, documentary or photoblog presenting the current practices – Objectives, Visit, case study, report, outcomes.

PART-V	

Food walk: City's culinary practices, food lore, and indigenous materials of the region used in cooking – Objectives, Visit, case study, report, outcomes.

Course Outcomes: On completion of this course, students are able to:			
COs	**Course Outcomes** with *Action verbs* for the Course topics	**Bloom's Taxonomy Level**	**Level Indicator**
CO1	**Identify** the needs of the community and involve them in problem **solving.**	Knowledge / Apply	L1 & L3
CO2	**Demonstrate** the knowledge about the culture and societal realities.	Understand	L2
CO3	**Develop** sense of responsibilities and bond with the local community	Apply	L4
CO4	**Make use** of the Knowledge gained towards significant contributions to the local community and the society at large.	Apply	L4
CO5	**Develop** among themselves a sense of social & civic responsibility & utilize their knowledge in finding practical solutions for individual and community problems.	Create	L6

Course Articulation Matrix

Mapping of Course Outcomes (CO) with Program Outcomes (POs) and Program Specific Outcomes (PSOs)

Sl. No.	Course Outcome	Programme Outcomes												Programme Specific outcomes		
		1	2	3	4	5	6	7	8	9	10	11	12	1	2	3

<u>**Guideline for Assessment Process:**</u>

Continuous Internal Evaluation (CIE) :

After completion of the social connect and responsibility course, the student shall prepare, with daily diary/ report as reference and a comprehensive report in consultation with the faculty/mentor to indicate what he has observed and learned in the social connect period.

The report shall be evaluated on the basis of the following below criteria's or other relevant criteria pertaining to the activity completed.

- Planning and scheduling the social connect.
- Information/Data collected during the social connect.
- Analysis of the information/data and report writing.
- Presentation and interaction.

CIE Rubrics for Evaluation.

Report	Video presentation	Interaction	Total
10	05	05	20

Note:

- Video presentation of **4 to 5 min** in a team to be presented and the same to be uploaded in the department YouTube channel.
- The number of students in each team can be from **4 to 5** members.
- Each activities has to be evaluated on above basis that is [20 * 5 = 100 marks] for final total marks.

<u>Duration :</u> A total of 25 – 30 hours engagement per semester is required for the 5th semester of the B.E./B.Tech. program. The students will be divided into groups and each group will be handled by faculty mentor.

Pedagogy – Guidelines:

Special Note: NO SEE – Semester End Exam – Completely Practical and activities based evaluation

It may differ depending on local resources available for the study as well as environment and climatic differences, location and time of execution.

Sl No	Topic	Group size	Location	Activity execution	Reporting	Evaluation Of the Topic
1.	**Plantation and adoption of a tree:**	May be individual or team	Farmers land/ parks / Villages / roadside/ community area / College campus etc…..	Site selection /proper consultation/Continuous monitoring/ Information board	Report should be submitted by individual to the concerned evaluation authority	Evaluation as per the rubrics Of scheme and syllabus by Faculty
2.	**Heritage walk and crafts corner:**	May be individual or team	Temples / monumental places / Villages/ City Areas / Grama panchayat/ public associations/Government Schemes officers/ campus etc…..	Site selection /proper consultation/Continuous monitoring/ Information board	Report should be submitted by individual to the concerned evaluation authority	Evaluation as per the rubrics Of scheme and syllabus by Faculty
3.	**Organic farming and waste management:**	May be individual or team	Farmers land / parks / Villages visits / roadside/ community area / College campus etc…..	Group selection / proper consultation / Continuous monitoring / Information board	Report should be submitted by individual to the concerned evaluation authority	Evaluation as per the rubrics Of scheme and syllabus by Faculty
4.	**Water conservation:** & conservation techniques	May be individual or team	Villages/ City Areas / Grama panchayat/ public associations/Government Schemes officers / campus etc…..	site selection / proper consultation/Continuous monitoring/ Information board	Report should be submitted by individual to the concerned evaluation authority	Evaluation as per the rubrics Of scheme and syllabus by Faculty
5.	**Food walk: Practices in society**	May be individual or team	Villages/ City Areas / Grama panchayat/ public associations/Government Schemes officers/ campus etc…..	Group selection / proper consultation / Continuous monitoring / Information board	Report should be submitted by individual to the concerned evaluation authority	Evaluation as per the rubrics Of scheme and syllabus by Faculty

DESIGN OF MACHINE ELEMENTS-II			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – VI			
Course Code: P22ME601		**L-T-P: 2-2-0**	**Credits: 03**
Contact Period-Lecture: 40 Hrs.	**Exam: 3 Hrs.**	**Weightage: CIE: 50 %;**	**SEE: 50%**

Course Learning Objectives:

The objectives of this course are to,
- Learn and apply systematic design methodologies for machine elements, including the selection of appropriate materials, consideration of functional requirements, adherence to design standards and safety factors.
- Develop a comprehensive understanding of machine elements used in various mechanical systems such as curved beams, cylinders, gears, bearings and springs.

Course Content

UNIT-I

Curved Beams: Introduction, stresses in curved beams, design of curved beams. **Springs:** Introduction, types of springs, terminology, stresses and deflection in helical coil springs of circular and non-circular cross sections, springs under fluctuating loads, Leaf Springs, stresses in leaf springs, equalized stresses, length of spring leaves.

8 Hrs

Self study component: Surge in springs, buckling in compression spring.

UNIT-II

Cylinders & cylinder heads: Introduction, thick cylindrical shells subjected to internal and external pressure, Lame's Equations, compound cylinders, stresses due to different types of fits, autofrettage, circular and rectangular coverplates.

8 Hrs

Self study component: Study of Barlow's, Birnie's and Clavarino's equation

UNIT-III

Spur Gears: Introduction, spur gears- terminology, standard proportions of gear systems, stresses in gear tooth, Lewi's equation and form factor, design for spur gears based on strength, dynamic load and wear load. **Bevel Gears-** terminology, formative number of teeth, design of bevel gears based on strength, dynamic and wears loads. Fault detection of gear using signal processing technique and machine learning approach.

8 Hrs

Self study component: Causes of Gear tooth failure, Effect of material defects on gear functioning.

UNIT-IV

Clutches & Brakes: Introduction, types of clutches, design of Clutches (single plate and multi plate clutches). Difference between single and multi plate clutches. **Brakes-** Types, energy absorption, heat dissipation. Design of single block brakes and simple band brakes. Safety issues in brakes.

8 Hrs

Self study component: Thermal rating of worm Gearing, Working of Centrifugal clutch.

UNIT-V

Lubrication and Bearings: Introduction, principle of hydrodynamic lubrication, assumptions in hydrodynamic lubrication, bearing characteristic number and modulus, Summerfield number, coefficient of friction, power loss, heat generation and heat dissipation, Design of journal bearings. Fault detection of bearing using signal processing technique and machine learning approach.

8 Hrs

Self study component: Properties of sliding contact bearing materials.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Apply** the basic concepts of materials engineering to design cylinders.	Applying	L3
CO2	**Apply** the Lame's theorem.	Applying	L3
CO3	**Analyze** the stresses induced in beams.	Analyzing	L4
CO4	**Analyze** the tribological characteristics to **design** the clutches.	Analyzing	L4

COMPUTER INTEGRATED MANUFACTURING		
[As per Choice Based Credit System (CBCS) & OBE Scheme]		
SEMESTER – VI		
Course Code: P22ME6021	**L-T-P: 3-0-0**	**Credits: 03**
Contact Period - Lecture: 40Hrs. Exam: 3Hrs.	**Weightage: CIE:50%;**	**SEE:50%**

Course Learning Objectives:

The objectives of this course are to,

- Understand the concepts of CAD and CAM.
- Recognize the importance of automation and additive manufacturing techniques in industries.
- Write the CNC programming using G codes and M codes.

Course Content

UNIT-I

Introduction: Production System, classification of production systems, automation, types of automation, Introduction to CIM, evolution of CIM, scope of CAD/CAM and CIM, production concepts – cycle time, production time and production rate, plant capacity, utilization and availability, manufacturing lead time, work-in-progress, WIP and TIP ratio. Numerical.

8 Hrs

Self Study Component: Advantages and Limitations of Automation.

UNIT-II

CAD and Computer Graphics Software: The design process, applications of computers in design, software configuration, functions of graphics package, constructing the geometry. **Computerized Manufacture Planning and Control System**: Computer aided process planning, retrieval and generative systems, benefits of CAPP, production planning and control systems.

8 Hrs

Self -Study Component: Standardization of Graphics.

UNIT-III

Flexible Manufacturing Systems: Fundamentals of flexible manufacturing systems, types of FMS, FMS components, Material handling and storage system, applications, benefits, FMS planning and design issues, automated storage and retrieval systems. **Additive Manufacturing Techniques:** Introduction to AM, AM evolution, Steps in AM, Classification of AM processes, advantages, disadvantages and applications of AM, Working principle of Stereo-lithography (SL) and Fused Deposition Modeling (FDM).

8 Hrs

Self -Study Component: Distinction between AM & CNC machining.

UNIT-IV

Numerical Control and CNC Machine Tools: Basic components of NC Systems, NC procedure, co-ordinate system, open loop & closed loop system, NC motion control system, advantage & limitations of NC, application of NC.CNC programming, manual part programming, G Codes, M Codes, programming of simple components in turning, drilling and milling systems.

8 Hrs

Self Study Component: Feedback devices, Axes-standards.

UNIT-V

Future of Automated Factory: Industry 4.0, functions and benefits. Components of Industry 4.0, Internet of Things (IoT), IoT applications in manufacturing, Big-Data and Cloud Computing for IoT, IoT for smart manufacturing, influence of IoT on predictive maintenance.

8 Hrs

Self Study Component: supply chain optimization, supply-chain & logistics.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Analyze** the concepts of CIM	Remember	L1
CO2	**Apply** the concepts of mathematical equation in material handling and AS/RS and Automation System	Applying	L3
CO3	**Develop** manual part programs for complex profiles and **Analyze** latest developments in CNC system	Analyzing	L4
CO4	**Analyze** the techniques involved in Automation and FMS and AMT.	Applying	L3

FINITE ELEMENT METHODS		
[As per Choice Based Credit System (CBCS) & OBE Scheme]		
SEMESTER – VI		
Course Code: P22ME6022	**L-T-P: 3-0-0**	**Credits: 03**
Contact Period-Lecture: 40 Hrs.	**Exam: 3 Hrs.**	**Weightage: CIE: 50 %; SEE: 50%**

Course Learning Objectives:

The objectives of this course are to,
- Provide an introductory approach to finite element method as a basic numerical tool for solving mechanical engineering problems.
- It also highlights various analyses of axially loaded uniformly tapered and stepped bars, truss members, beams and heat transfer problems.

Course Content

UNIT-I

Introduction to FEM: Need for use of FEM, Advantages and disadvantages of FEM, Engineering Applications of FEM, Steps involved in FEM, Discretization process - types of elements (1D,2D,3D), size of the elements, location of nodes, node numbering scheme, Method of solution of linear algebraic equations - Gauss elimination method. Basic elastic equations – body force and traction force, strain-displacement relations. Principle of minimum potential energy and derivation of potential energy functional for a 3D elastic body, concept of plane stress and plane strain and their stress-strain relations.

8 Hrs

Self-study component: Methods for FEM formulation, Gaussian Quadrature for 1D integrals.

UNIT-II

Interpolation Models: Displacement function, selection of the order of displacement function, convergence criteria, geometric isotropy, Pascal's triangle for 2D polynomial, Different co-ordinate systems used in FEM, Interpolation or shape functions for 1D linear and quadratic bar elements in cartesian and natural co-ordinate systems. Lagrangian polynomial–Shape functions for linear quadrilateral element (QUAD-4) and quadratic quadrilateral element (9-noded), Iso-parametric, sub-parametric and super-parametric elements. **8 Hrs**

Self study component: Simplex, complex and multiplex Elements, Pascal's pyramid for 3D.

UNIT-III

Element Stiffness Matrix and Load Vectors: Strain displacement matrix, Stiffness matrix and load vector for linear and quadratic bar element. Assembly of elements by direct stiffness method, Treatment of boundary conditions- elimination and penalty methods. Analysis of axially loaded uniformly tapered and stepped bars. **8 Hrs**

Self study component: Stress vector for CST element under plane stress and plane strain condition.

UNIT-IV

Analysis of Plane Trusses and Beams: stiffness matrix for plane truss element, analysis of truss members. Hermite shape function for beam element in Cartesian coordinates (Description), Stiffness matrix and load vector (Description) for beam element, element shear force and bending moment, analysis of beams. **8 Hrs**

Self study component: Differences between Hermite shape function and Lagrange interpolation function. Case studies on Electronic components.

UNIT-V

Analysis of Heat Transfer Problems: Steady state heat transfer, 1D heat conduction- governing equation, boundary conditions, one-dimensional element, Galerkin's approach to heat conduction, heat flux boundary condition. 1D heat transfer in thin fins-Formulation of equations. Simple numerical of 1D heat transfer problems on composite walls with conduction and convection. **8 Hrs**

Self study component: Different types of boundary conditions in heat transfer problem. Case studies on Electronic components.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Understanding** the fundamental principles of FEM such as discretization, interpolation and numerical integration and **apply** it for solving complex engineering problems.	Remember	L1
CO2	**Formulate** element stiffness matrices and load vectors for different elements using variational principle and **analyze** axially loaded bars.	Analyzing	L4
CO3	**Utilize** finite element formulations in **analyzing** the stresses, strains and reactions of trusses and transversely loaded beams.	Understanding	L2
CO4	**Formulate** finite element equations for heat transfer problems using Variational and Galerkin techniques to **analyze** conduction and convection heat transfer problems.	Analyzing	L4

HEATING, VENTILATION AND AIR CONDITIONING
[As per Choice Based Credit System (CBCS) & OBE Scheme]
SEMESTER – VI

Course Code: P22ME6023	**L-T-P: 2-2-0**	**Credits: 03**
Contact Period-Lecture: 40 Hrs.	**Exam: 3 Hrs.**	**Weightage: CIE: 50 %;** SEE: 50%

Course Learning Objectives:
  The objectives of this course are to,

* Study the principles, design, and operation of heating, ventilation and air conditioning (HVAC) systems.
* Learn about the fundamentals of heat transfer, psychrometrics, equipment selection, system design, and energy efficiency in HVAC systems.

Course Content

UNIT-I
Introduction to HVAC Systems: History of Air Conditioning, Overview of HVAC systems, Components and their applications, Importance of HVAC systems in buildings, Sustainability and Green Buildings, Roles and responsibilities of HVAC engineers. **Single-zone Air Conditioning Systems** (Summer air conditioning systems, Summer air conditioning systems with reheat, Winter air conditioning systems, Air conditioning systems using evaporative cooling). **Multi-zone Air Conditioning Systems** (Multi-zone systems with reheat, Dual-duct multi-zone air conditioning systems, Variable air volume (VAV) systems).

8 Hrs

Self-study component: Trends in Energy Use and Impact, Overview of HVAC Design Procedure.

UNIT-II
Psychrometric Principles of HVAC: Introduction, Basic Psychrometric Processes: Mixing of two moist air streams, Sensible heating or cooling, Dehumidification by cooling, Humidification of air, Evaporative cooling and Space condition line. Numerical. **The Psychrometric Chart:** Constant dry-bulb temperature lines, Saturation curve and constant relative humidity lines, Constant wet-bulb temperature lines, Constant specific volume lines, Enthalpy–moisture protractor, and Sensible heat ratio protractor. Numerical.
Case Study: MATLAB Code for Psychrometric Properties.

8 Hrs

Self-study component: Applications of Psychrometric Processes.

UNIT-III
Basics of Design considerations in HVAC systems: Introduction, Outdoor Design Conditions, **Thermal Comfort and Indoor Design Conditions:** Heat transfer from the human body, Indoor design conditions, Indoor air quality. **Internal Heat Sources in Buildings:** Heat gain from people, Heat gain from lighting, Heat gain from equipment. T**ransient Effects in Building Energy Transfer:** Transient heat conduction through walls, Heat gain by a thin surface.

8 Hrs

Self-study component: Moisture Transport in Building Structures - Fick's law.

UNIT-IV
Cooling and Heating Load Calculations: Cooling Load Calculation Methods: Heat balance method (HBM), Radiant time series (RTS) method, Application of the RTS method and the Central Air Treatment (CTS) method. Heating Load Calculation Methods. Numerical. **Basics of Duct and Pipe Sizing**: Duct Systems, Fans, Air-Diffusing Equipment, Pipe, Tube, and Fittings, Pumps.
Case Study: MATLAB Code for Cooling Load due to People.

8 Hrs

Self-study component: MATLAB Code for Cooling Load due to Wall Conduction

UNIT-V
Building Energy Estimating and Modeling Methods: Introduction, Degree–Day Method for Estimating Energy Use. **Bin Method for Estimating Energy Use:** Generation of bin data, Applications of the bin method, Cycling of furnaces, Air-source heat pumps, Cooling towers, Variable occupancy rates.

Simulation Methods for Estimating Energy Use: Central HVAC systems, Simulation of multi-chiller systems, Simulation of water-loop heat pump system (WLHPS). Numerical.
Case Study: MATLAB Code for Bin Data and Degree–Days

8 Hrs

Self-study component: Discuss future of HVAC**.**

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Interpret** the various components of HVAC systems using the principles of heating and cooling.	Remember	L1
CO2	**Apply** heat transfer principles to **design** heating and cooling requirements for different spaces and **analyze** heat loads to perform psychrometric study.	Applying	L3
CO3	**Apply** energy-efficient practices in HVAC system design, operation, and maintenance.	Applying	L3
CO4	**Develop** MATLAB codes based on ASHRAE Handbook of Fundamentals.	Applying	L3

MATERIALS SELECTION AND FAILURE ANALYSIS
[As per Choice Based Credit System (CBCS) & OBE Scheme]
SEMESTER – VI

Course Code: P22ME6024	**L-T-P: 2-2-0**	**Credits: 03**
Contact Period - Lecture: 40 Hrs. Exam: 3Hrs.	**Weightage: CIE: 50 %; SEE: 50%**	

Course Learning Objectives:
The course aims at enabling the students to understand the concepts of material science and metallurgy and failure analysis tools to select appropriate material based on applications.

Course Content

UNIT-I

Introduction: Classification of engineering materials: metals, ceramics, glasses, elastomers, polymers. Definition of material properties, material selection, material selection and manufacturing, design process, procedure for martial selection, additional factors to consider, consideration of the manufacturing process, ultimate objective, material substitution, effect of product liability on material selection.

8 Hrs

 Self Study Component: Material selector issue of materials engineering.

UNIT-II

Material and alloy selection: Selection strategy, property limits, material indices-The material index for a light-strong-tie, light-stiff beam and light-strong beam, performance maximizing criteria, strengthening mechanisms. Material property charts: modulus - density, strength - density, modulus - strength, and stiffness - specific strength, etc.   **8 Hrs**

Self Study Component: Material property charts: thermal conductivity –thermal diffusivity

UNIT-III

 Material selection- case studies: Materials for oars, materials for large telescopes, materials for table legs, materials for flywheels, materials for high flow fans, materials for springs, elastic hinges, materials for seals, pressure actuators, and safe pressure vessels.   **8 Hrs**

Self Study Component: Materials for passive solar heating.

UNIT-IV

Selection of materials and shape: Shape factors, elastic extension, elastic bending and twisting, failure in bending and twisting, axial loading and column buckling, efficiency of standard sections, material limits for shape factors, microscopic shape and shape factors. Case studies on selection of materials and shape-Forks for a racing bicycle.   **8 Hrs**

Self Study Component: Material indices which include shape.

UNIT-V

Failure analysis tools : Reliability concept and hazard function, life prediction, life extension, application of Poisson, exponential and Weibull distributions for reliability, bath tub curve, parallel and series systems, MTBF, MTTR, FMEA-design FMEA, process FMEA, analysis of causes of failure modes, ranks of failure modes. Illustration through Numerical examples.   **8 Hrs**

Self Study Component: Fault tree analysis; Industrial case studies on FMEA.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Choose** the most appropriate material and shape based on applications.	Remember	L1
CO2	**Apply** the knowledge of mechanical properties and behaviour of materials.	Applying	L3
CO3	**Apply** engineering problems using failure analysis tools.	Applying	L3
CO4	**Analyze** and Quantify mechanical integrity and failure in materials.	Applying	L3

ADVANCED ENGINEERING MATERIALS
[As per Choice Based Credit System (CBCS) & OBE Scheme]
SEMESTER – VI

Course Code: P22ME6031		L-T-P: 3-0-0		Credits: 03
Contact Period-Lecture: 40 Hrs.	Exam: 3 Hrs.	Weightage: CIE: 50 %;		SEE: 50%

Course Learning Objectives:
The objectives of this course are to,
- Distinguish various classes of advanced materials, their processing, properties and applications
- Interpret new terms and information advanced and emerging materials.

Course Content

UNIT-I
Metal Matrix and Ceramics Composites: Characteristics of MMC, various types of metal matrix composites, alloy vs. MMC, advantages of MMC, limitations of MMC, Metal matrix reinforcements: particles, fibres. Effect of reinforcement, volume fraction, rule of mixtures, Processing of MMC, powder metallurgy process, diffusion bonding, stir casting, squeeze casting.

8 Hrs

Self study components: Differentiate the MMCs and alloys.

UNIT-II
Recent Advances of Ceramics composites , Refractories: Ceramic Materials: Basic ceramic structure, types of ceramics, applications of ceramics, processing of ceramics: glass-forming processes, particulate forming processes, Various types of Ceramic Matrix composites: oxide ceramics, non oxide ceramics, aluminium oxide , silicon nitride, reinforcements : particles, fibres, whiskers. **Refractories:** Refractoriness, types of refractories, properties of refractories, **Silica and Silicates**: Crystalline and non-crystalline forms of silica, configuration of minerals.

8 Hrs

Self study component: High-Silica Glasses and Photochromic- Zena Glasses

UNIT-III
Nano-materials: Introduction, processes to prepare nano-materials, uses, future prospects, nano-electromechanical systems, applications of CNT. **Super-alloys**: Nickel Alloys, types of super-alloys, heat-resisting alloys, hastelloy, nickel–molybdenum steel alloy, cryogenic steels (or extremely low temperature purpose alloys), Ni-based cryogenic steels. **Shape Memory Alloys**: Introduction, concept, shape memory effect (SME), material systems of different shape memory alloys, preparation of SMA, applications.

8 Hrs

Self study component: Biomedical Materials applications.

UNIT-IV
Sandwich Composite Materials: Introduction, types: honeycombs and foams, types of face (skin) materials for sandwich constructions and their characteristics, special applications: spacecraft grade sandwich composites, marine grade sandwich composites, aircraft grade sandwich composites, automobile grade sandwich composites, current fields of research in sandwich composites/constructions. **Biocomposite Materials:** Biodegradable plant fibre-reinforced composite, advantages, disadvantages, applications, and different types of plant fibres for green composite.

8 Hrs

Self study component: Custom sandwich composite for paddle surfboard.

UNIT-V
Emerging and Futuristic Materials: Introduction, applications, FGMS in construction, functionally graded fibre-reinforced concrete applications, functionally graded fibre cement, mixture design for choosing fibre cement, Epoxy–TiO2 particulate-filled functionally graded, functionally graded nanoelectronic, optoelectronic and thermoelectric materials, applications of FGM. **Biomimetic Materials:** Moth eye–inspired biomimetic materials, termite-inspired biomimetic materials, mosquito bite–inspired

biomimetic materials.

8 Hrs

Self study component: PbTe-Based FGM Thermoelectric Materials

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Apply** the concept of structure, properties, and relationships of advanced and emerging engineering materials and predict material behavior based on these relationships.	Applying	L3
CO2	**Identify** the various advanced materials for different processing techniques.	Understanding	L2
CO3	**Apply** different advanced material characterization techniques to emphases the various engineering materials.	Applying	L3
CO4	**Analyze** the properties and behavior of structural materials.	Applying	L3

ELECTRIC AND HYBRID VEHICLES			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – VI			
Course Code: P22ME6032		**L-T-P: 3-0-0**	**Credits: 03**
Contact Period-Lecture: 40 Hrs.	**Exam: 3 Hrs.**	**Weightage: CIE: 50 %;**	**SEE: 50%**

Course Learning Objectives:
The objectives of this course are to,
- Present a comprehensive overview of Electric and Hybrid Electric Vehicles.
- Choose a suitable drive scheme for developing an electric hybrid vehicle depending on resources.
- Identify various communication protocols and technologies used in vehicle networks.

Course Content

UNIT-I

Introduction to Hybrid Electric Vehicles: History of hybrid and electric vehicles, social and environmental importance of hybrid and electricvehicles, impact of modern drive-trains on energy supplies, Interdisciplinary Nature of HEVs, State of the Art of HEVs. **Conventional Vehicles:** Basics of vehicle performance, vehicle power source characterization, transmission characteristics.

8 Hrs

Self Study Component: Sustainable Transportation, Challenges and Key Technology of HEVs.

UNIT-II

Hybrid Electric Drive-trains: Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis. **Electric Drive-trains**: Basic concept of electric traction, introduction to various electric drive-train topologies, power flow control in electric drive-train topologies, fuel efficiency analysis.

8 Hrs

Self Study Component: Induction Motor Drives, Permanent Magnet Motor Drives.

UNIT-III

Electric Propulsion unit: Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives. **Sizing the drive system:** Matching the electric machine and the Internal Combustion Engine (ICE), Sizing the propulsion motor, sizing the power electronics, selecting the energy storage technology.

8 Hrs

Self Study Component: Design and Sizing of Traction Motors.

UNIT-IV

Plug-in Hybrid Electric Vehicles: Introduction to PHEVs, PHEVs Architectures, Equivalent Electric Range of Blended PHEVs, Fuel Economy of PHEVs, Power Management of PHEVs, PHEVs Design. **Component Sizing:** Component Sizing of EREVs, Component Sizing of Blended PHEVs, HEV to PHEV Conversions, Vehicle-to-Grid Technology.

8 Hrs

Self Study Component: EV and PHEV Battery Chargers.

UNIT-V

Energy Storage and Charging Stations: Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage, Fuel Cell based energy storage, Type of charging station, Selection and Sizing of charging station, Components of charging station, Single line diagram of charging station. **Communications, Supporting Subsystems:** In vehicle networks- CAN, Energy Management Strategies: Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies.

8 Hrs

Self Study Component: Comparison of different energy management strategies.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Apply** the knowledge of basic science to study components of HEVs.	Remember	L1
CO2	**Apply** basic concepts for designing electric and hybrid electric vehicles.	Applying	L3
CO3	**Identify** the different sources of energy and communications in Hybrid and Electric Vehicles.	Understanding	L2
CO4	**Analyze** the architecture and power technologies in HEVs and Plug-in Hybrid EVs.	Applying	L4

CONTROL ENGINEERING			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – VI			
Course Code: P22ME6033		**L-T-P: 2-2-0**	**Credits: 03**
Contact Period-Lecture: 40 Hrs.	**Exam: 3 Hrs.**	**Weightage: CIE: 50 %;**	**SEE: 50%**

Course Learning Objectives:

The objectives of this course are to,

- Design and analysis of linear control systems to improve their static and transient behavior.
- Analyse the frequency and time response of the different control system.
- Apply the concepts of stability of control system by using different plots.

Course Content

Unit-1

Introduction: Concept of automatic controls, open and closed loop control systems, concepts of feedback control systems, requirement of an ideal control system. Examples of control systems - home heating system, traffic control system, liquid level control system. **Mathematical Models of Physical Systems:** Definition of Laplace transformation, transfer function models, mathematical models of mechanical systems, models of DC and AC motors, models of hydraulic systems and models of thermal systems.

9 Hrs

Self-Study Component: Concept of superposition for linear systems with examples.

Unit-2

Block Diagrams and Signal Flow Graphs: Transfer functions definition, block diagram representation of system elements, reduction of block diagrams (Numerical based on shifting of take-off point and interchanging of summing point only). **Signal flow graphs** – Terminologies, Signal flow graph from block diagram, Manson's gain formula.

7 Hrs

Self-Study Component: Transfer function of multiple input multiple output control Systems

Unit-3

Time Response Analyses: Introduction, transient and steady state response of control system. First order system response to step and ramp inputs, concepts of time constant and its importance in speed of response. Second order system response to step input, transient response specifications (description and numerical). Steady-state error analysis, steady-state error constants- static position error constant, static velocity error constant and static acceleration error constant.

8 Hrs

Self-Study Component: Study of various controllers in automated machines.

Unit-4

Mathematical Concept of Stability: Stability definition, characteristic root locations and stability, Routh's stability criterion, special cases of Routh's criterion. **Frequency Response Analysis:** Polar plots, relative stability- concepts phase margin and gain margin. Frequency response analysis using Bode plot: Bode attenuation diagrams, stability analysis using Bode plots.

8 Hrs

Self-Study Component: System compensation: Series and feedback compensation

Unit-5

Root Locus Analysis: Introduction, definition of root loci, general rules for constructing root loci, root locus analysis of control systems. **State-Space Analysis:** Introduction, definitions, state-space equations, transformation matrix, controllability, and observability, Kalman and Gilberts test.

8 Hrs

Self-Study Component: MATLAB program to generate root-locus plot.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Identify** the components of control systems given real life situation.	Remember	L1
CO2	**Develop** transfer function models and state-space models of single input single output, linear time invariant systems.	Understanding	L2
CO3	**Analyse** the time response of first and second order systems.	Analyzing	L4
CO4	**Apply** the concept stability in control systems using various methods.	Applying	L3

PRODUCTION MANAGEMENT		
[As per Choice Based Credit System (CBCS) & OBE Scheme]		
SEMESTER – VI		
Course Code: P22ME6034	**L-T-P: 3-0-0**	**Credits:03**
Contact Period-Lecture: 40 Hours	**Exam:3 Hours**	**Weightage%:CIE:50,SEE:50**

Course Learning objectives:

The objectives of this course are to,

- Identify the demand of the products that has to be produced in future using forecasting technique.
- Use of scheduling techniques and inventory control method to optimize the facility location and plant layout to improve the quality of product.

Course Content

Unit-1

Introduction: Introduction, Meaning and concepts of Production Management (PM), evolution of PM. **Productivity:** strategies to improve productivity, product strategies, product and process focused system, product life cycle, world class manufacturing. **Organization of the Operations Functions:** Process focused organization, product focused organization structure, difference between process and product focused Organization.

8 Hrs

Self Study Component: Functions of Production Management, production to stock or to order, productive system positioning strategies

Unit-2

Forecasting: Need for forecasting, objectives and limitations of forecasting, costs of forecasting, **Classification of Forecasting Methods**: Time series method, components time series methods, simple moving average, weighted moving averages, simple exponential smoothing method, least square or regression, Delphi technique.

8 Hrs

Self Study Component: Mean Absolute Deviation (MAD), Mean Square Error (MSE), Mean Absolute Percentage Error (MAPE).

Unit-3

Facilities Location and Plant Layout: Introduction, general procedure for location, factors affecting location, cost analysis, quantitative method, GRID method. **Plant Layout:** objectives of plant layout, factors affecting plant layout, types of plant layouts, process layout method: numerical on load distance analysis, systematic layout planning. **8 Hrs**

Self Study Component: Factors to be considered to select foreign locations, list the computer approaches to layout design.

Unit-4

Scheduling: Define scheduling, scheduling strategies, Forward and backward scheduling, Johnson's rule for 2 machines, 3 machines and n machines, graphical method for 2 machines and n jobs, indexing method.

8 Hrs

Self Study Component: Scheduling sequence operation, standard scheduling techniques, different types of control charts

Unit-5

Inventory Control: Types of inventory control, cost associated with inventory control, classification of inventory items , problems on ABC analysis on inventory, deterministic model in inventory control: problems only on economic lot size with uniform rate of demand and instantaneous replenishment, finite rate of replenishment with shortages. **Quality control:** Introduction to Quality control, Plan Do Check Act (PDCA Cycle), Quality circle, Kaizen, 5S, Six Sigma, Introduction to ISO standards. **8 Hrs**

Self Study Component: KANBAN-system, JIT, POKEYOKE.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Apply** various production management techniques and tools to improve productivity and efficiency in manufacturing or service operations.	Applying	L3
CO2	**Evaluate** different types of production systems and **analyze** the factors affecting production system design, capacity planning, and layout configuration.	Applying	L3
CO3	**Analyze** the production processes to achieve cost-effectiveness, minimize waste, reduce lead time and improve overall operational performance.	Understanding	L2
CO4	**Analyze** statistical process control, quality assurance techniques and control quality throughout the production process.	Applying	L3
CO5	**Apply** the leadership and teamwork abilities within the context of production management.	Applying	L3

THEORY OF PLASTICITY [As per Choice Based Credit System (CBCS) & OBE Scheme] **SEMESTER – VI**		
Course Code: P22ME6035	**L-T-P: 3-0-0**	**Credits: 03**
Contact Period-Lecture: 40 Hrs.	**Exam: 3 Hrs.**	**Weightage: CIE: 50 %;** **SEE: 50%**

Course Learning Objective:
The objective of this course is to provide a basic understanding of the plasticity theory as applied to metal working processes and their analysis for improved quality and productivity.

Course Content

UNIT-I

Fundamental of Elasticity: Concept of stress, equilibrium equation stress transformation laws, spherical and deviator stress tensors, octahedral stresses, concept of strain, representation strain, compatibility equations, deviator and spherical strain tensors, strain transformation laws, elastic strain energy, theories of strength, numerical.

9 Hrs

Self Study Component: Maximum principal stress theory (Rankine), maximum shear stress theory (Tresca).

UNIT-II

Plastic Deformation of Metals: Crystalline structure in metals, mechanism of plastic deformation, factors affecting plastic deformation, strain hardening, recovery, recrystalization and grain growth, flow figures (Luder's lines).**Yield Criteria:** Introduction, yield or plasticity conditions, Tresca and Von-Mises criteria, experimental evidence for yield criteria (a) Lode's experiment (b) Quinney's experiment. The Haigh-Westergaard stress space.

8 Hrs

Self Study Component: Maximum principal strain theory (Saint-Venant), total strain energy per unit volume (Haigh).

UNIT-III

Stress- Strain Relations: Introduction, types of materials, empirical equations, theories of plastic flow, experimental verification of Saint-Venant's theory of plastic flow, concept of plastic potential, maximum work hypothesis, concepts of stress rate.

7 Hrs

Self Study Component: Mechanical work for deforming a plastic substance.

UNIT-IV

Slip Line Field Theory: Introduction, basic equations for incompressible two dimensional flow, continuity equations (Geiringer equation), stresses in conditions of plain strain, convention for slip lines, solutions of plastic deformation problem, geometry of slip line filed, properties of slip lines, construction of slip line nets.

8 Hrs

Self Study Component: Velocity discontinuity at certain slip lines.

UNIT-V

Bending of Beams: Introduction, analysis of stresses, linear and non-linear stress-strain curve, shear stress distribution, residual stresses in plastic bending, numerical. **Torsion of Bars:** Introduction, plastic torsion of a circular bar, elastic- perfectly - plastic material, elastic work hardening material, residual stresses and numerical.

8 Hrs

Self Study Component: Plane strain bending of beam and plastic torsion of a circular bar.

HEAT AND MASS TRANSFER
[As per Choice Based Credit System (CBCS) & OBE Scheme]
SEMESTER – VI

Course Code: P22ME604		**L-T-P: 3-0-2**	**Credits: 04**
Contact Period - Lecture: 40+24 (P) Hrs	**Exam: 3Hrs.**	**Weightage: CIE: 50%; SEE:50%**	

Course Learning Objective:

The objective of this course is to cover the basic principles of heat transfer, to present a wealth of real-world engineering examples to give students a feel for how heat transfer is applied in engineering practice and to develop an intuitive understanding of the subject matter by emphasizing the physics and physical arguments.

Course Content
UNIT-I

General introduction: Modes and basic laws of heat transfer.3D-general heat conduction equation in Cartesian coordinates, heat conduction equation in cylinder and spherical co-ordinates (no derivation). Boundary conditions of conduction problems. Numerical. **One Dimensional steady state heat conduction:** slab, hollow cylinder, hollow sphere and their composites. One Dimensional heat conduction with internal heat generation in slab. Critical thickness of insulations, Numerical Problems.

9 Hrs

Self study component: Combined Heat Transfer Mechanism, Thermal Resistances in Series and Parallel.

UNIT-II

Theory of fins: Governing partial differential equation – One Dimensional fin of uniform cross-section –Numerical problems. **Transient Heat Conduction:** Systems with negligible internal resistance, Transient heat conduction in plane walls, cylinders, spheres with convective boundary conditions, Chart solution, Numerical problems.

8 Hrs

Self-study component: Applications of Fins, Numerical methods for 1D & 2D steady state Heat conduction.

UNIT-III

Convection: Concept of boundary layers (hydro dynamic and thermal) - critical Reynolds number. Drag-co-efficient and heat transfer coefficient, Reynold's – Colburn analogy. Application of dimensional analysis for free & forced convection problems, significance of Reynolds, Prandtl, Nusselt and Grashoff numbers. **Free convection:** free convection from vertical, horizontal and inclined flat plates, vertical and horizontal cylinder. Numerical Problems. **Forced convection**: Flow over a flat plate, over a cylinder and across a tube bundle, flow through tubes and ducts. Numerical Problems.

9 Hrs

Self-study component: Forced Convection cooling of electronic devices.

UNIT-IV

Radiation: Introduction- absorption, reflection and transmission of radiation, black and grey body concept , Kirchoff's Law, Planck's law, Wein's displacement law, Lamberts cosine law, radiation intensity- total emissive power, radiation between two parallel black surfaces, gray surfaces, radiation shield, Hottel's cross string formula. Numerical Problems.

7 Hrs

Self study component: Fundamental principles of white, Opaque and transparent body.

UNIT-V

Heat exchangers: Classification of heat exchangers overall heat transfer coefficient, fouling and fouling factor; LMTD, effectiveness- NTU methods of analysis of heat exchangers. Numerical Problems. **Heat transfer with phase change (boiling and condensation**). Types of condensation, Nusselt's theory for laminar condensation on a vertical flat surface, regimes of pool boiling, Numerical Problems. **Mass transfer**: Mass transfer concept and Fick's law of diffusion (no numericals)

7 Hrs

Self study component: Shell & tube, compact & multipass heat exchangers.

Practical Content

24 Hrs

Exp-1: Determination of thermal Conductivity of a Metal Rod.
Exp-2: Determination of Overall Heat Transfer Coefficient of a Composite wall.
Exp-3: Determination of Effectiveness and Efficiency of a Metallic fin.
Exp-4: Determination of free Convective Heat Transfer Coefficient of a vertical Cylinder.
Exp-5: Determination of Heat Transfer Coefficient in Forced Convection.
Exp 6: Determination of Effectiveness in Parallel Flow and Counter Flow Heat Exchangers.
Determine the following using suitable software/programming language:
Develop code using suitable software to determine thermal conductivity in slab with and without heat generation using Fourier's law of heat conduction.
Develop code using suitable software to determine heat transfer coefficients in convection methods.
Develop code using suitable software to determine emissivity of a surface and Stefan's Boltzmann constant.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Apply** fundamentals of heat transfer to **formulate** the governing differential equation to solve one-dimensional steady and unsteady state heat conduction process.	Applying	L3
CO2	**Apply** the concepts of convection heat transfer to **analyse** the problems using both analytical and empirical approaches.	Applying	L3
CO3	**Apply** the concepts of heat transfer to **design** and **analyse** the thermal systems.	Applying	L3
CO4	**Interpret** experimental data and validate by writing codes and prepare report as an individual or as a team member to communicate effectively.	Analyzing	L4

ALTERNATE FUELS, ENERGY CONVERSION AND CONSERVATION
[As per Choice Based Credit System (CBCS) & OBE Scheme]
SEMESTER – VI

Course Code: P22MEO6051	**L-T-P: 3-0-0**	**Credits: 03**
Contact Period-Lecture: 40 Hrs.	**Exam: 3 Hrs.**	**Weightage: CIE: 50 %; SEE: 50%**

Course Learning Objectives:

The objectives of this course are to,

- Identify different types of alternate fuels and explore the advantages, disadvantages and application of alternate fuels.
- Understand the economic concept of energy and explore various energy storage techniques and systems, focusing specifically on mechanical energy storage methods.

Course Content
UNIT-I

Introduction: Types of energy sources and their availability, need for alternative energy sources, Non-conventional energy sources, Classification of alternative fuels and drivetrains. Technological up gradation required, Implementation barriers for alternative fuels, stakeholders of alternative fuels. **Solar energy** Introduction to solar energy, solar energy collectors; Liquid flat plate collectors, solar air heaters, concentrating collectors (Cylindrical, parabolic), application of solar energy.

8 Hrs

Self-Study Component: Site selection considerations for wind Energy, Scenario of conventional auto fuels.

UNIT-II

Gaseous alternative fuels: Introduction, properties, production, storage, transportation, advantages, disadvantages and application of hydrogen, compressed natural gas (CNG), liquefied natural gas (LNG), adsorbed natural gas and landfill gas(LFG).

8 Hrs

Self-Study Component: Natural gas, liquefied petroleum gas (LPG), liquefied hydrogen (LH_2).

UNIT-III

Biomass Energy: Introduction, properties, production, storage, advantages, disadvantages and applications of Biogas, Biomethane, Methanol, Ethanol, straight vegetable oil (SVO) and biodiesel.

8 Hrs

Self-Study Component: Khadi and Village Industries Commission, Butanol.

UNIT-IV

Alternative power trains: Components of an Electrical Vehicles (EV), batteries, chargers, drives, transmission and power devices. Advantages and disadvantages of EVs. **Hybrid electric vehicles (HEV):** Drive train components, advantages of HV. **Dual fuel:** History of dual fuel technology, Duel fuel engine operation. Advantages, disadvantages and application of duel fuel technology.

8 Hrs

Self-Study Component: Advanced technology in Electric vehicles & Hybrid Electric vehicles.

UNIT-V

Energy Conservation: Economic concept of energy, principles of energy conservation and energy audit, energy conservation approach, Co-Generation, Waste heat utilization, Heat recuperators, heat regenerators, energy storage, energy storage system; Mechanical energy storage.

8 Hrs

Self-Study Component: Combined cycle power generation, Heat pipes, Electrical storage.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Apply** the knowledge of alternate fuels to study their properties, production methods and potential applications.	Remember	L1
CO2	**Analyze** energy-efficient technologies to conserve energy in design principles and behavior modification approaches to reduce energy consumption.	Analyzing	L4
CO3	**Apply** emerging trends in technological advancements and innovations in the field of alternate fuels and energy conservation.	Understanding	L2
CO4	**Analyze** energy planning and management techniques to optimize energy use and waste recovery.	Analyzing	L4

INTRODUCTION TO FINITE ELEMENT METHODS		
[As per Choice Based Credit System (CBCS) & OBE Scheme]		
SEMESTER – VI		
Course Code: P22MEO6052	**L-T-P: 3-0-0**	**Credits: 03**
Contact Period-Lecture: 40 Hrs.	**Exam: 3 Hrs.**	**Weightage: CIE: 50 %;**	**SEE: 50%**

Course Learning Objectives:

The objectives of this course are to,

- Provide an introductory approach to finite element method as a basic numerical tool for solving mechanical engineering problems.
- It also highlights various analyses of axially loaded uniformly tapered and stepped bars, truss members, beams and heat transfer problems.

Course Content

UNIT-I

Introduction to FEM: Need for use of FEM, Advantages and disadvantages of FEM, Engineering Applications of FEM, Steps involved in FEM, Discretization process - types of elements (1D,2D,3D), size of the elements, location of nodes, node numbering scheme, Method of solution of linear algebraic equations - Gauss elimination method. Basic elastic equations – body force and traction force, strain-displacement relations. Principle of minimum potential energy and derivation of potential energy functional for a 3D elastic body, concept of plane stress and plane strain and their stress-strain relations.

8 Hrs

Self-study component: Methods for FEM formulation, Gaussian Quadrature for 1D integrals.

UNIT-II

Interpolation Models: Displacement function, selection of the order of displacement function, convergence criteria, geometric isotropy, Pascal's triangle for 2D polynomial, Different co-ordinate systems used in FEM, Interpolation or shape functions for 1D linear and quadratic bar elements in cartesian and natural co-ordinate systems. Lagrangian polynomial–Shape functions for linear quadrilateral element (QUAD-4) and quadratic quadrilateral element (9-noded), Iso-parametric, sub-parametric and super-parametric elements.

8 Hrs

Self study component: Simplex, complex and multiplex Elements, Pascal's pyramid for 3D.

UNIT-III

Element Stiffness Matrix and Load Vectors: Strain displacement matrix, Stiffness matrix and load vector for linear and quadratic bar element. Assembly of elements by direct stiffness method, Treatment of boundary conditions- elimination and penalty methods. Analysis of axially loaded uniformly stepped bars.

8 Hrs

Self study component: Analysis of axially loaded uniformly tapered bars.

UNIT-IV

Analysis of Plane Trusses and Beams: stiffness matrix for plane truss element, analysis of truss members. Hermite shape function for beam element in Cartesian coordinates (Description), Stiffness matrix and load vector (Description) for beam element, element shear force and bending moment, analysis of beams. **8 Hrs**

Self study component: Differences between Hermite shape function and Lagrange interpolation function. Case studies on Electronic components.

UNIT-V

Analysis of Heat Transfer Problems: Steady state heat transfer, 1D heat conduction- governing equation, boundary conditions, one-dimensional element, Galerkin's approach to heat conduction, heat flux boundary condition. Simple numerical of 1D heat transfer problems on composite walls with conduction and convection. **8 Hrs**

Self study component: Different types of boundary conditions in heat transfer problem. Case studies on Electronic components.

3. https://youtu.be/KR74TQesUoQ

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Understanding** the fundamental principles of FEM such as discretization, interpolation and numerical integration and **apply** it for solving complex engineering problems.	Understanding	L2
CO2	**Formulate** element stiffness matrices and load vectors for different elements using variational principle and **analyze** axially loaded bars.	Applying	L3
CO3	**Utilize** finite element formulations in **analyzing** the stresses, strains and reactions of trusses and transversely loaded beams.	Applying	L3
CO4	**Formulate** finite element equations for heat transfer problems using Variational and Galerkin techniques to **analyze** conduction and convection heat transfer problems.	Analyzing	L4

MAINTENANCE ENGINEERING		
[As per Choice Based Credit System (CBCS) & OBE Scheme]		
SEMESTER – VI		
Course Code: P22MEO6053	**L-T-P: 3-0-0**	**Credits: 03**
Contact Period-Lecture: 40 Hrs.	**Exam: 3 Hrs.**	**Weightage: CIE: 50 %;** **SEE: 50%**

Course Learning Objectives:

The objectives of this course are to,

- Strengthen the Maintenance and management capabilities of the students.
- Enable the students to handle the different maintenance requirements and management that are commonly used in machinery and minimize equipment failure.

Course Content

Unit-1

Maintenance Concept: Introduction, Maintenance Definition, Systems Approach, Challenges in Maintenance, Maintenance Objectives, Maintenance Levels ,Responsibilities of Maintenance Department, Types of Maintenance Systems, Benefits of Maintenance, Effects of Maintenance Concept of Maintainability , Principles of Maintenance.

8 Hrs

Self study component: Role of Overhauling in Maintenance.

Unit-2

Planned Preventive Maintenance: Introduction, Scope of Preventive Maintenance, Elements of Planned Preventive Maintenance (PPM), Implementation of PPM, Administrative Structure, Work Planning and Scheduling, Workload Estimation, Manpower Estimation, Scheduling PPM, Work-order Procedure, Creating a Set of Priority Functions, Forecasting Maintenance Requirements, Planned Maintenance Procedure, Effectiveness of Preventive Maintenance, Maintenance by Objectives.

8 Hrs

Self Study Component: Benefits of PPM.

Unit-3

Maintenance Planning and Scheduling: Introduction, Planning of Maintenance Function, Manpower Allocation, Long-range Planning, Development of Maintenance Department, Short-range Planning, Planning Techniques, Planning Procedure, Estimation of Maintenance Work, Maintenance Control, Maintenance Scheduling. **Computers in Maintenance** – Introduction, Computer-Aided Maintenance, Maintenance Decision Making, Computerized Maintenance Planning.

8 Hrs

Self Study Component: Computer Application In Inventory Control.

Unit-4

Condition Monitoring: Introduction, Basic Concept, Levels of Condition Monitoring, Condition-Monitoring Techniques, Future of Condition Monitoring, Case Study. **Maintenance Evaluation** – Introduction, Background of Maintenance Function, Need of Evaluation, Maintenance Function Requirements, Benefits of Maintenance Evaluation, Types of Evaluation, Objectives of Evaluation, Selection of Work Measurement Methods.

8 Hrs

Self Study Component: Cost of Maintenance Evaluation.

Unit-5

Advances in Maintenance: Introduction, Reliability and Maintenance, Telematic Maintenance Services, Decision Support System Based on Artificial Intelligence, Use of Radio Frequency Identification (RFID), Optimization of Maintenance Activities, Risk-based Maintenance Planning, Total Productive Maintenance (TPM), Maintenance Management, Quality Control in Maintenance, Effective Maintenance Organization.

8 Hrs

Self Study Component: Root Cause Analysis (RCA), Maintenance Outsourcing.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Identify** maintenance engineering functions in different organizations.	Remember	L1
CO2	**Apply** maintenance policy techniques in mechanical systems and **analyse** job and spare parts control.	Applying	L3
CO3	**Apply** condition monitoring techniques in industries and adopt advance techniques in maintenance engineering.	Applying	L3
CO4	**Analyse the** Root Cause for failure of machines.	Analyzing	L4

OPERATIONS RESEARCH		
[As per Choice Based Credit System (CBCS) & OBE Scheme]		
SEMESTER – VI		
Course Code: P22MEO6054	**L-T-P: 2-2-0**	**Credits: 03**
Contact Period - Lecture: 40 Hrs; Exam: 3 Hrs.	**Weightage % : CIE: 50-SEE:50**	

Course Learning Objectives:

The objectives of this course are to,

- Understand the basic concepts of Operations Research.
- Identify and develop operation research models from the verbal description of real life and optimize the solutions.

Course Content
Unit-1
Introduction: Definition, scope of Operations Research (OR) approach and limitations of OR models, characteristics and phases of OR, mathematical formulation of linear programming problems. Graphical solution for maximization and minimization problems.
8 Hrs
Self Study Component: Advantages and applications of OR.
Unit-2
Linear Programming Problems: Simplex method, slack, surplus and artificial variables, degeneracy and procedure for resolving degeneracy. Big M method, two phase method.
8 Hrs
Self Study Component: Dual simplex method.
Unit-3
Transportation and Assignment: Formulation of transportation problem, initial feasible solution methods, optimality test, degeneracy in transportation problem, assignment problem, Hungarian method, travelling salesman problem.
8 Hrs
Self Study Component: Unbalanced transportation and assignment problems.
Unit-4
Network Analysis in Project Planning (PERT and CPM): Project, project planning, project scheduling, project controlling, network terminologies, PERT and CPM.
8 Hrs
Self Study Component: Crashing of networks.
Unit-5
Game Theory: Formulation of games, two people-zero sum game, games with and without saddle point, graphical solution (2 x n, m x 2 game) and dominance property. **Queuing Theory**: Queuing system and their characteristics. The M/M/1 Queuing system, steady state performance analyzing of M/M/ 1 System.
8 Hrs
Self Study Component: Competitive games.

Course Outcomes: On completion of this course, students will be able to:

COs	Course Outcomes with *Action verbs* for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	**Formulate** real world problems as a Linear programming model and demonstrate solution by graphical method and **analysis** technique.	Understand	L2
CO2	**Apply** the specific LPP like transportation and assignment and **analyse** the solution.	Applying	L3
CO3	**Apply** the different project mathematical model and **analyze** the solution.	Applying	L3
CO4	**Apply** the game and Queuing strategy with their characteristics and **analyse** the solutions	Applying	L3

COMPUTER AIDED MODELING AND ANALYSIS LABORATORY
[As per Choice Based Credit System (CBCS) & OBE Scheme]
SEMESTER – VI

Course Code: P22MEL606	**L-T-P:0-0-2**	**Credits:1**
Contact Period-Lecture: 30(P) Hrs.	**Exam: 3 Hrs.**	**Weightage:CIE:50%; SEE:50%**

Course Learning Objectives:
The objectives of this course are to,
- Apply the concept of Finite Element Method (FEM) in design engineering using ANSYS package.
- Apply the concept of control engineering using MATLAB.

Course Content

PART-A (ANSYS)

15 Hrs

Exp-1: Analysis of plane trusses.
Exp-2: Analysis of Beams for SFD and BMD.
Exp-3: 2D conduction and convection heat transfer analysis.
Exp-4: Analysis of bars with constant cross section area and tapered cross section area.
Exp-5: Plane stress analysis of plate with hole.
Exp-6: Modal and Harmonic analysis of fixed - fixed beam.

PART-B (MATLAB)

15 Hrs

Exp-7: Solving of simultaneous equations.

Exp-8: Unit-step response plot of control system for open loop transfer function, state-space equation and to determine rise time, peak time, maximum overshoot and settling time.

Exp-9: Root locus plot of control systems for open loop transfer function and state-space equation.

Exp-10: Bode plot of control systems for open loop transfer function and state-space equation.

Mini - Project
[As per Choice Based Credit System (CBCS) & OBE Scheme]
SEMESTER – VI

Course Code:	P22MEMP607	Credits:	02
Teaching Hours/Week (L:T:P)	0:0:2	CIE Marks:	50
Total Number of Teaching Hours:	26	SEE Marks:	50

Based on the ability/abilities of the student/s and recommendations of the mentor, a single discipline or a multidisciplinary Mini- project can be assigned to an individual student or to a group having not more than 4 students. (or Mini Project is a laboratory-oriented course which will provide a platform to students to enhance their practical knowledge and skills by the development of small systems/applications)

CIE procedure for Mini-project:

(i) Single discipline: The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide. The CIE marks awarded for the Mini-project work shall be based on the evaluation of project report, project presentation skill, and question and answer session in the ratio of 50:25:25. **The marks awarded for the project report shall be the same for all the batch mates.**

(ii) **Interdisciplinary**: CIE shall be group-wise at the college level with the participation of all the guides of the college through Dean (III). The CIE marks awarded for the Mini-project, shall be based on the evaluation of project report, project presentation skill and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.

SEE for Mini-project:

▪ **Single discipline**: Contribution to the Mini-project and the performance of each group member shall be assessed individually in the semester end examination (SEE) conducted at the department through Viva-Voce examination.

• **Interdisciplinary**: Contribution to the Mini-project and the performance of each group member shall be assessed individually in semester end examination (SEE) through Viva-Voce examination conducted separately at the departments to which the student/s belongs to.

EMPLOYABILITY ENHANCEMENT SKILLS - VI [As per Choice Based Credit System (CBCS) & OBE Scheme] **SEMESTER – VI for Civil, Mech, IP & Automobile Branches only**			
Course Code:	P22HSMC608A	**Credits:**	01
Teaching Hours/Week (L:T:P)	0:2:0	**CIE Marks:**	50
Total Number of Teaching Hours:	30	**SEE Marks:**	50

Course Learning Objectives: This course will enable the students to:

- Calculations involving permutations and combinations, probability, ages and data interpretation.
- Explain concepts behind logical reasoning modules of syllogisms and data sufficiency.
- Prepare students for Job recruitment process and competitive exams.
- Develop problem solving skills through various programming language.

UNIT – I		**06 Hours**

Quantitative Aptitude: Permutation and Combination, Probability, Ages.

Self-study component:	Inferred meaning

UNIT – II		**06 Hours**

Quantitative Aptitude: Data Interpretation.

Logical Reasoning: Syllogisms, Data Sufficiency.

Self-study component:	Chain rule

UNIT – III		**06 Hours**

Soft skills: Group Discussions, Resume Writing, LinkedIn Profiling, Interview Skills.

Self-study component:	Interpersonal communication

UNIT – IV		**06 Hours**

Interview Preparation: Mock GDs, Resume Validation and Personal Interviews.

Self-study component:	Stress Management

UNIT – V		**06 Hours**

Database: Introduction to database, Types of SQL statements, MySQL commands.

Self-study component:	Schema change statements in SQL.

Course Outcomes: On completion of this course, students are able to:

COs	**Course Outcomes** with *Action verbs* for the Course topics	**Bloom's Taxonomy Level**	**Level Indicator**

CO1	Solve the problems based on Permutation and combination, Probability, ages and data interpretation.	Applying	L3
CO2	Solve logical reasoning problems based on Syllogisms and Data Sufficiency.	Applying	L3
CO3	Apply suitable programming language and / or suitable data structures to solve the given problem.	Applying	L3

Universal Human Values and Professional Ethics			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – VI			
Course Code:	P22UHV609	**Credits:**	01
Teaching Hours/Week (L:T:P):	1 : 0 : 0	**CIE Marks:**	50
Total Number of Teaching Hours:	25 + 5	**SEE Marks:**	50

Course objectives:

This course is intended to:

1. To help the students appreciate the essential complementarity between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity which are the core aspirations of all human beings.

2. To facilitate the development of a Holistic perspective among students towards life and profession as well as towards happiness and prosperity based on a correct understanding of the Human reality and the rest of existence. Such a holistic perspective forms the basis of Universal Human Values and movement towards value-based living in a natural way.

3. To highlight plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behaviour and mutually enriching interaction with Nature.

4. This course is intended to provide a much-needed orientation input in value education to the young enquiring minds.

Teaching-Learning Process (General Instructions)

These are sample Strategies, which teachers can use to accelerate the attainment of the various course outcomes.

1. The methodology of this course is explorational and thus universally adaptable. It involves a systematic and rational study of the human being vis-à-vis the rest of existence.

2. In addition to the traditional lecture method, different types of innovative teaching methods may be adopted so that the activities will develop students' theoretical and applied skills.

3. State the need for UHV activities and its present relevance in the society and Provide real-life examples.

4. Support and guide the students for self-study activities.

5. You will also be responsible for assigning homework, grading assignments and quizzes, and documenting students' progress in real activities in the field.

6. This process of self-exploration takes the form of a dialogue between the teacher and the students to begin with, and then to continue within the student in every activity, leading to continuous selfevolution.

7. Encourage the students for group work to improve their creative and analytical skills.

Course outcome (Course Skill Set)

At the end of the course, students are expected to become more aware of themselves, and their surroundings (family, society, nature);

- They would become more responsible in life, and in handling problems with sustainable solutions, while keeping human relationships and human nature in mind.
- They would have better critical ability.
- They would also become sensitive to their commitment towards what they have understood (human values, human relationship and human society).
- It is hoped that they would be able to apply what they have learnt to their own self in different day-to-day settings in real life, at least a beginning would be made in this direction.

Expected to positively impact common graduate attributes like:

1. Ethical human conduct

2. Socially responsible behaviour

3. Holistic vision of life

4. Environmentally responsible work

5. Having Competence and Capabilities for Maintaining Health and Hygiene

6. Appreciation and aspiration for excellence (merit) and gratitude for all

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50) and for the SEE minimum passing mark is 35% of the maximum marks (18 out of 50 marks). The student is declared as a pass in the course if he/she secures a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

Continuous internal Examination (CIE)

- For the course, CIE marks will be based on a scaled-down sum of two tests and other methods of assessment.

- CIE paper shall be set for 25 questions, each of the 02 marks. The pattern of the question paper is MCQ (multiple choice question). The time allotted for SEE is 01 hour. The student has to secure a minimum of 35% of the maximum marks meant for SEE.

The sum of two tests, will be out of 100 marks and will be scaled down to 50 marks
Internal Assessment Test question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.
Semester End Examinations (SEE)
SEE paper shall be set for **50 questions,** each of the 01 marks. **The pattern of the question paper is MCQ (multiple choice questions). The time allotted for SEE is 01 hour.** The student has to secure a minimum of 35% of the maximum marks meant for SEE.
