DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

Profile

Department of Electrical & Electronics Engineering Programme has been accredited by NBA for 6 Academic years (2017-18 to 2022-23)

The Department of Electrical and Electronics Engineering was established right from the inception of the institute in the year 1962. The various programs offered by the Department are B.E., M.Sc., (Engg.) by research and research leading Ph.D affiliated to Visvesvaraya Technological University (VTU), Belagavi. Also, Department is affiliated for Ph.D program with University of Mysore, Mysore . More than 100 research papers have been published by the Department faculty members in various International & National journals and conferences.

The Department emphasizes towards imparting quality education, rigorous teaching-learning, hands-on expertise and helping students to shape their all-round personality. The Department with its strong pool of faculty, well-developed laboratories, latest software and hardware facilities, contributes to develop life-long learning skills to its students and producing worthy researchers by offering doctoral research program.

The academic programs are designed and updated keeping in view the constantly changing industrial needs, skills and challenges emerging out of new research. The academic programs are well received by the industry and academia. The department has always exerted the best of its effort to meet the objectives of achieving technical excellence in the areas of Electrical and Electronics Engineering such as High Voltage Engineering, Power Electronics & Drives, Control Systems, Power Systems, Energy Systems, Analog and Digital Electronics, Signal Processing, PLC & SCADA and Microcontrollers

The Department regularly organizes industrial visits, Technical lectures by experts from industries and institutes in contemporary areas to bridge the gap between syllabi and current developments.

VISION

The department of E & E would endeavor to create a pool of Engineers who would be technically competent, ethically strong also fulfill their obligation in terms of social responsibility.

MISSION

- Adopt the best pedagogical methods and provide the best facility, infrastructure and an ambience conducive to imbibe technical knowledge and practicing ethics.
- Group and individual exercises to inculcate habit of analytical and strategic thinking to help the students to develop creative thinking and instil team skills.
- MOUs and Sponsored projects with industry and R & D organizations for Collaborative learning
- Enabling and encouraging students for continuing Education and moulding them for life-long learning process

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- PEO1:** Excel in professional career and/or higher education by acquiring knowledge in mathematical, computing and Electrical & Electronics engineering principles
- PEO2:** Analyze real life problems and Design Electrical & Electronics Engineering system with appropriate solutions that are technically sound, economically feasible and socially acceptable
- PEO3:** Exhibit professionalism, ethical attitude, communications skills, team work in their profession and adapt to current trends by engaging in lifelong learning.

PROGRAMME OUTCOMES (POs)

- PO-1:** Graduates will apply the knowledge of mathematics, Physics, chemistry and allied engineering subjects to solve problems in Electrical and Electronics Engineering.
- PO-2:** Graduates will Identify, formulate and solve Electrical and Electronics Engineering problem.
- PO-3:** Graduates will design Electrical and Electronics systems meeting the given specifications for different problems taking safety and precautions into consideration.
- PO-4:** Graduates will design, conduct experiments, analyze and interpret data
- PO-5:** Graduates will use modern software tools to model and analyze problems, keeping in view their limitations.
- PO-6:** Graduates will understand the impact of local and global issues / happenings on Electrical Engineers.
- PO-7:** Graduates will provide sustainable solutions for problems related to Electrical and Electronics Engineering and also will understand their impact on environment.
- PO-8:** Graduates will have knowledge of professional ethics and code of conduct as applied to Electrical Engineers.
- PO-9:** Graduates will work effectively as an individual and as a member or leader in diverse teams and in multi-disciplinary settings.
- PO-10:** Graduates will communicate effectively in both verbal and written form.
- PO-11:** Graduates will plan, execute and complete projects
- PO-12:** Graduates will have the ability for self- education and lifelong learning

PROGRAMME SPECIFIC OUTCOMES (PSOs)

- PSO1:** To understand the concept in Electrical and Electronics Engineering and apply them to develop modules analyze assess the performance of various power system equipment, generation, transmission, utilization and protection mechanisms.
- PSO2:** Design, develop, analyze and test electrical and electronics system: Deploy control strategies for electrical drives, power system networks, power electronics, high voltage and other related applications.

Industrial Drives & Applications			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – VII			
Course Code:	P22EE701	Credits:	03
Teaching Hours/Week (L:T:P):	3:0:0	CIE Marks:	50
Total Number of Teaching Hours:	40	SEE Marks:	50
Course Learning Objectives: This course will enable the students to:			
<ul style="list-style-type: none">Understand the fundamental concepts of electric drives, including their advantages, components, and selection criteria, as well as the current status of DC and AC drives in the industry.Analyze the dynamics of electrical drives by mastering fundamental torque equations, speed-torque conventions, and multi-quadrant operation, and learn how to calculate time and energy loss in transient operations.Gain proficiency in converter-fed and DC drives, including rectifier-controlled DC drives (single-phase and three-phase), Ward Leonard drives, and dual converter-fed drives, and understand their operational modes under different current conditions.			
UNIT – I	Introduction		8 Hours
Introduction: Electric Drives, Advantages of Electrical Drives, Parts of Electrical Drives, Choice of Electrical Drives, Status of DC & AC Drives.			
Dynamics of Electrical Drives: Fundamental Torque Equations, Speed Torque Conventions and Multi-quadrant Operation. Equivalent Values of Drive Parameters, Components of Load Torques, Nature and Classification of Load Torques, Calculation of Time and Energy Loss in Transient Operations, Steady State Stability			
Self-study component:		Load Equalization.	
UNIT – II	Converter-fed DC Drives		8 Hours
Rectifier controlled DC Drives: single phase Half & Fully controlled rectifier fed dc drives, (separately & series dc motors) under continuous and discontinuous current mode, Ward Leonard drives. Three phase half controlled rectifier control of dc separately excited motor, Three phase fully controlled rectifier control of dc separately excited motor converter fed dc drives, dual converter fed drives			
Self-study component:		Controlled rectifier-fed dc drives	
UNIT – III	Chopper-fed Drive and DC Motor Braking		8 Hours
Chopper controlled DC drives: Chopper controlled DC drives – Chopper Control Of Separately excited DC motor (motoring and braking operation, multi-quadrant operation of chopper) Chopper control of series motor (motoring and braking operation).			
Concept of DC motor braking: Methods of braking – regenerative & dynamic braking			
Self-study component:		Plugging	

P.E.S. College of Engineering, Mandya
Department of Electrical & Electronics Engineering

UNIT – IV	AC Drives	8 Hours	
AC Drives: Introduction to three phase Induction Motor drives, Analysis and Performance, Speed and Torque control methods: Stator voltage control, rotor voltage control, Stator frequency control, Voltage and frequency control, VSI fed IM drive, Induction motor drives, CSI fed IM drive,Static Kramer drive, Static Scherbius drive and braking of IM.			
Self-study component:	Eddy current drives		
UNIT – V	Synchronous motor Drives	8 Hours	
Synchronous motor Drives: Introduction, Variable frequency control, Self controlled synchronous motor employing load commutated thyristor inverter. Industrial drives: Rolling mill drives, Textile mill drives, Cement mill drives, Paper mill drives.			
Self-study component:	Starting large synchronous machines.		
Course Outcomes: On completion of this course, students are able to			
COs	Course Outcomes with <i>Action verbs</i> for the Course topics	Bloom’s Taxonomy Level	Level Indicator
CO1	Explain the basic concepts of AC & DC Drives and its applications.	Understand and Remember	L1, L2
CO2	Apply the knowledge of power electronics to solve the problems related to AC & DC Drives.	Apply	L3
CO3	Analyze the performance of AC & DC drives	Analyze	L4

Testing and commissioning of Electrical Equipments

[As per Choice Based Credit System (CBCS) & OBE Scheme]

SEMESTER VII

Course Code:	P22EE7021	Credits:	03
Teaching Hours/Week (L:T:P):	3:0:0	CIE Marks:	50
Total Number of Teaching Hours:	40	SEE Marks:	50

Course Learning Objectives (CLOs)

At the end of the course the students should have able to:

- Understand the concepts of installation of Transformers i.e. location, site selection, rating of machine, enquiry and storing of dispatched machine. And analyze different test which are conduct before commissioning of a transformer.
- Understand the concepts of installation of synchronous machine i.e. foundation details, cooling arrangements, excitation. And analyze different test which are conduct before commissioning of a synchronous machine.
- Understand the concepts of installation of Induction motor i.e. foundation details, alignment, coupling
- Analyze different test which are conducted on circuit breaker and its maintenance.

UNIT – I	Transformers	8 Hours
-----------------	---------------------	----------------

TRANSFORMERS: Power and distribution transformers specifications as per BIS standards.

Installation: Location, site, selection, foundation details (like bolts size, their number, etc), code of practice for terminal plates, polarity & phase sequence, oil tanks, drying of windings and general inspection.

Commissioning tests: Following tests as per national & International Standards, volt ratio test, earth resistance, oil strength, Buchholz & other relays, tap changing gear, fans & pumps, insulation test, impulse test, polarizing index, load & temperature rise test.

Self-study component:	Different types of transformer oil tanks
------------------------------	--

UNIT – II	Synchronous Machines	8 Hours
------------------	-----------------------------	----------------

Specifications of synchronous machines

Installation: Physical inspection, foundation details, alignments, excitation systems, cooling and control gear, drying out.

Commissioning Tests: Insulation, Resistance measurement of armature & field windings,

Performance tests: Various tests to estimate the performance of generator operations, slip test, maximum lagging current, maximum reluctance power tests, sudden short circuit tests, transient & sub transient parameters, measurements of sequence impedances, capacitive reactance, and separation of losses, temperature rise test, and retardation tests. Various abnormal conditions and the respective Protection

Self-study component:	Selection of Motor
------------------------------	--------------------

P.E.S. College of Engineering, Mandya
Department of Electrical & Electronics Engineering

UNIT – III	Induction Motors	8 Hours	
<p>Specifications of induction motors & ratings</p> <p>Installation: Location of the motors (including the foundation details) & its control apparatus, shaft & alignment for various coupling, fitting of pulleys & coupling, drying of windings.</p> <p>Commissioning Test: Mechanical tests for alignment, air gap symmetry, tests for bearings, vibrations & balancing.</p> <p>Electrical Tests: Insulation test, earth resistance, high voltage test, starting up, failure to speed up to take the load, type of test, routine test, factory test and site test (in accordance with ISI code).</p>			
Self-study component:	Maintenance of induction motor		
UNIT – IV	Switch Gear & Protective Devices	8 Hours	
<p>Switch gear: Standards, types, specification, installation, commissioning tests, maintenance schedule, type & routine tests of Circuit breakers</p> <p>Current transformer and Voltage transformer: Specifications, procurement, testing of CT and PT, Specifications and testing of cable</p>			
Self-study component:	Rating of circuit breaker		
UNIT – V	Safety Management	8 Hours	
<p>Objectives of safety management, seven principles of safety management, work permit system, safety clearance and creepages, Safety procedures in eclectic plant, first aid, Electric shock, touch potential and step potential, recommended safety precautions against electric shock in small buildings, shops, and small LV installations Live line working (Hot line Maintenance), safety management during O and M.</p>			
Self-study component:	First aid its importance		
Course Outcomes: On completion of this course, students are able to			
COs	Course Outcomes with <i>Action verbs</i> for the Course topics	Bloom’s Taxonomy Level	Level Indicator
CO1	Understand the basic concepts of Electrical equipments for installation and commissioning	Remember & Understand	L1, L2
CO2	Apply the knowledge of electrical science for the installation procedure of electrical equipments	Apply	L3
CO3	Analyze the different testing & commissioning procedure of electrical equipments	Analyze	L4
TEXT BOOKS:

Modern Control Theory			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – VII			
Course Code:	P22EE7022	Credits:	03
Teaching Hours/Week (L:T:P):	3:0:0	CIE Marks:	50
Total Number of Teaching Hours:	40	SEE Marks:	50
Course Learning Objectives: This course will enable the students to:			
<ul style="list-style-type: none">Understand modeling in state space for different systems and analyze the state space representation using different canonical forms.Get the knowledge of solution of linear time invariant systems, state transition matrix, determination of state transition matrix using various techniques and analyze the controllability and observability of the system.Understand the basics of design of control system by pole placement technique, necessary & sufficient conditions for the design, determination of state feedback gain matrix using various methods and observer design.Understand the basics of non linear systems			
UNIT – I	Modeling in State Space		8 Hours
Introduction, Limitations of classical control theory, Concept of State, State variables, State vector, State space, State-space equations and block diagram of the linear, continuous –time control system represented in state space, State space model for physical systems-electrical, mechanical and electro mechanical systems.			
Self-study component:		state model by cascade programming.	
UNIT – II	State space representation, Controllability & Observability		8 Hours
State space representations of transfer function systems: Canonical forms- Controllable, observable, and diagonal, Jordan canonical forms, Eigen values, diagonalization, invariance of Eigen values.			
Concept of Controllability & Observability- Kalman’s test and Gilbert’s test, complete controllability& Observability in the s-plane, Sterilizability and Detectability.			
Self-study component:		Principle of Duality	
UNIT – III	Solution of the linear time invariant state equation		8 Hours
State transition matrix –properties, computation using Laplace transformation, power series, modal matrix & Cayley- Hamilton method, solution of homogeneous and non-homogenous state equations.			
Self-study component:		linearization of state equation	
UNIT – IV	Design of control systems in state space		8 Hours
Design of control systems in state space: Design by Pole Placement technique, stability improvements by state feedback, necessary & sufficient conditions for arbitrary pole placement, computation of feedback gain matrix by direct substitution, Ackermann’s formula, and design of full order state observer.			

P.E.S. College of Engineering, Mandya
Department of Electrical & Electronics Engineering

Self-study component:		Design of Minimum order and reduced order state observer.	
UNIT – V	Nonlinear systems		8 Hours
Introduction to nonlinear systems, Characteristics of nonlinear systems, Common physical nonlinearities, Describing functions of non-linearities.			
Self-study component:		Multi variable non linearity	
Course Outcomes: On completion of this course, students are able to:			
COs	Course Outcomes with <i>Action verbs</i> for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	Understand the concepts of control system to do modeling in state space.	Remember & Understand	L1 & L2
CO2	Solution of the linear time invariant state equation and discuss the concept of controllability and observability.	Apply	L3
CO3	Analyze the functions of non linear systems.	Analyze	L4
CO4	Design of control system in state space	Design	L5

Power system operation and control			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – VII			
Course Code:	P22EE7023	Credits:	03
Teaching Hours/Week (L:T:P):	3:0:0	CIE Marks:	50
Total Number of Teaching Hours:	40	SEE Marks:	50
Course Learning Objectives: This course will enable the students to:			
<ul style="list-style-type: none">• Get the overview of computer control centers for power systems.• Understand the methods of controlling power generation.• Study the methods of controlling reactive power.• Study the need of Unit commitment.• Understand about power system security			
UNIT – I	Control center operation of power systems		8 Hours
Introduction: Operating States of Power System, Objectives of Control, Key Concepts of Reliable Operation, Preventive and Emergency Controls, Energy Management Centers.			
Supervisory Control and Data Acquisition (SCADA): Introduction, components, application in Power System, basic functions and advantages. Building blocks of SCADA system, components of RTU, communication subsystem, IED functional block diagram.			
Self-study component:	Classification of SCADA system		
UNIT – II	Automatic Generation Control		8 Hours
Automatic control loops of generators: AGC and AVR. Automatic Load Frequency Control (ALFC/LFC) of single area systems-turbine speed governing system, turbine model, generator- load model, Complete block diagram of representation of load frequency control of an isolated power system, steady state analysis, dynamic response, concept of control area, Automatic voltage regulator.			
Self-study component:	load frequency control of two area systems		
UNIT – III	Control of voltage and Reactive Power		8 Hours
Introduction, sending and receiving end voltages in terms of power and reactive power, generation and absorption of reactive power, relation between voltage, power and reactive power at a node, methods of voltage control-Injection of Reactive Power: shunt capacitors and reactors, series capacitor, synchronous compensator, static VAR compensator and STATCOMs, Tap-Changing Transformers, Voltage collapse.			
Self-study component:	Voltage control in Distribution Network		
UNIT – IV	Unit Commitment		8 Hours
Introduction, need and importance of unit commitment, constraints in unit commitment: spinning reserve, Thermal unit constraints, other constraints problems on priority list method, Methods of			

P.E.S. College of Engineering, Mandya
Department of Electrical & Electronics Engineering

Unit commitment -priority lists method.			
Self-study component:		Dynamic programming solution	
UNIT – V	Power system security		8 Hours
Introduction, factors affecting power system security, Power system contingency analysis, Detection of network problems, network sensitivity methods, calculation of network sensitivity factor, contingency ranking.			
Self-study component:		Concentric relaxation	
Course Outcomes: On completion of this course, students are able to:			
COs	Course Outcomes with <i>Action verbs</i> for the Course topics	Bloom’s Taxonomy Level	Level Indicator
CO1	Understand the concept of power system to control them under various conditions.	Remember & Understand	L1, L2
CO2	Apply the different methods to find solution of Unit commitment.	Apply	L3
CO3	Analyze the different methods of AGC and AVR.	Analyze	L4
CO4	Analyze different power system security issues in order to solve network problems.	Analyze	L4

Electric Vehicles			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – VII			
Course Code:	P22EE7024	Credits:	03
Teaching Hours/Week (L:T:P):	3:0:0	CIE Marks:	50
Total Number of Teaching Hours:	40	SEE Marks:	50
Course Learning Objectives: This course will enable the students to:			
<ul style="list-style-type: none">Understand the concepts of Electric Vehicles (EVs), Hybrid Electric Vehicles (HEVs), and their components.Compare Electric Vehicles (EVs) with Internal Combustion Engine Vehicles (ICEVs) and understand their respective architectures.Understand the concepts of BMS.Types of Electric Motors: DC Motors, Induction Motors, Brushless DC Motors, Switched Reluctance MotorsDomestic Charging Infrastructure for Electric Vehicles			
UNIT – I	Introduction to Alternative Vehicles & Architectures		8 Hours
Electric Vehicles, Hybrid Electric Vehicles, Electric and Hybrid Vehicle Components, Vehicle Mass and Performance, Electric Motor and Engine Ratings, Electric and Hybrid Vehicle History, EV/ICEV Comparison, Electric Vehicles Architectures, Hybrids Based on Architecture, Plug-In Hybrid Electric Vehicle.			
Self-study component:		Latest trend in EV	
UNIT – II	Battery Energy Storage		8 Hours
Batteries: Lead Acid Battery, Nickel based batteries, Sodium based batteries, Lithium based batteries – Li-ion & Li-poly, Metal Air Battery, Zine Chloride battery; Ultra capacitors; Flywheel Energy Storage System; Hydraulic Energy Storage System; Comparison of different Energy Storage System.			
Self-study component:		Future of Battery technology	
UNIT – III	Batteries for Electric Vehicles		8 Hours
Selection of battery for EVs & HEVs, Traction Battery Pack design, Requirement of Battery Monitoring, Battery State of Charge Estimation methods, Battery Cell equalization problem, thermal control, protection interface, SOC Estimation, Energy & Power estimation, Battery thermal management system, Battery Management System: Definition, Parts: Power Module, Battery, DC/DC Converter, load, communication channel, Battery Pack Safety.			
Self-study component:		Battery Standards & Tests.	
UNIT – IV	Electric Machines		8 Hours
Principle of Operation and Performance: DC Motor Drives, Induction Motor Drives, Permanent Magnetic Brush-Less DC Motor Drives, Switched Reluctance Motor Drives			

P.E.S. College of Engineering, Mandya
Department of Electrical & Electronics Engineering

Self-study component:		Special Electrical Machines for EV applications	
UNIT – V	EV Charging Infrastructure		8 Hours
Domestic charging infrastructure, Public charging infrastructure: Normal charging stations, Occasional charging stations, Fast charging stations, Battery swapping stations, Move-and-charge zones, Payment systems. Standardization and regulations, Training and promotion, Impacts on power system: Harmonic impact, Harmonic compensation, Current demand impact, Current demand minimization.			
Self-study component:		Policies and regulations for EV vehicles	
Course Outcomes: On completion of this course, students are able to:			
COs	Course Outcomes with <i>Action verbs</i> for the Course topics	Bloom’s Taxonomy Level	Level Indicator
CO1	Illustrate the fundamental concepts and components of Electric Vehicles (EVs) including their architectures and key differences from traditional vehicles.	Remember & Understand	L1&L2
CO2	Apply the knowledge of battery technologies, motors and charging infrastructure of EV to study electric and hybrid vehicle applications.	Apply	L3
CO3	Analyze the performance of various batteries, electric machines, vehicle components, and evaluating their suitability for different types of electric vehicle architectures.	Analyze	L4
Text Book(s):			
1. Electric and Hybrid Vehicles: Design Fundamentals Iqbal Husain CRC Press 2003			
2. Modern Electric, Hybrid Electric, and Fuel Cell Vehicles: Fundamentals, Theory, and Design M. Ehsani, Y. Gao, S. Gay and Ali Emadi CRC Press 2005			
3. AK Bandyopadhyay, Nanomaterials , New Age International (P) Ltd., 2 nd Edition, 2010.			
Reference Book(s):			
1. Energy Management Strategies for Electric and Plug-in Hybrid Electric Vehicles Sheldon S. Williamson Springer 2013			
2. Chan, C.C._ Chau, K.T. - Modern Electric Vehicle Technology-Oxford University Pres			
3. Pistoia, J.P. Wiaux, S.P. Wolsky, Used Battery Collection and Recycling, Elsevier, 2001			
4. Arno Kwade, Jan Diekmann, Recycling of Lithium-Ion Batteries: The LithoRec Way, Springer, 2018.			

Course Outcomes	Program Outcomes													
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O 1	PS O2
Illustrate the fundamental concepts and components of Electric Vehicles (EVs) including their architectures and key differences from traditional vehicles.	3	-	-	-	-	-	-	-	-	-	-	2	2	-
Apply the knowledge of battery technologies, motors and charging infrastructure of EV to study electric and hybrid vehicle applications.	3	-	-	-	-	-	-	-	-	-	-	2	2	-
Analyze the performance of various batteries, electric machines, vehicle components, and evaluating their suitability for different types of electric vehicle architectures.	-	3	-	-	-	-	-	-	-	-	-	-	2	-

ENERGY AUDITING & DEMAND SIDE MANAGEMENT			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – VII			
Course Code:	P22EE7031	Credits:	03
Teaching Hours/Week (L:T:P):	3:0:0	CIE Marks:	50
Total Number of Teaching Hours:	40	SEE Marks:	50
Course Learning Objectives: This course will enable the students to:			
<ul style="list-style-type: none">• Energy situation in the world and in India, Time value of money concept, Developing cashflow models, Payback analysis, taxes and tax credits, concept of ABT.• Energy audit, presentation of energy audit results, measurements in energy audit.• Power factor correction, energy efficient motors and lighting basics.• Concept of DSM, benefits of DSM, Different			
UNIT – I	Introduction		8 Hours
Introduction: Energy Sources-Primary & Secondary sources, Commercial & noncommercial sources, Renewable &Nonrenewable sources. Energy situation in the world and India, Energy consumption, Energy Conservation- Three Pronged Approach to Energy Management, Electrical distribution Codes, standards for electrical equipment, regulations, other legal Provisions and Legislation.			
Energy Economic Analysis: The time value of money concept, Interest, Types of interest, present worth & future worth. Developing cash flow models, payback analysis, advantages and disadvantages of payback analysis, depreciation, methods of depreciation, Concept of ABT, broad features of ABT design and numerical problem.			
Self-study component:		Taxes and tax-credit	
UNIT – II	Energy Auditing		8 Hours
Introduction, Definition & objectives of Energy Management, Principles of management, Energy management strategy, Elements of energy audits, energy audit: types and methodology, preliminary audit and detailed audit, role of energy management team, energy audit reporting format, energy use profiles, Audits required to construct the energy use profiles, measurements in energy audits, energy audit instruments			
Self-study component:		Electrical System Optimization	
UNIT – III	Electrical Equipment and power factor correction		8 Hours
Power factor improvement-Power factor, causes of low power factor, advantages of high power factor, disadvantages of low power factor, Power factor improvement equipment-static capacitors, synchronous condenser, and phase advancers. Calculation of power factor correction, importance of power factor improvement, most economical power factor, location & sizing of capacitors, energy efficient motors, Numerical on power factor correction.			

P.E.S. College of Engineering, Mandya
Department of Electrical & Electronics Engineering

Self-study component:		Lighting basics	
UNIT – IV	Demand Side Management		8 Hours
Introduction to DSM, concept of DSM, benefits of DSM,DSM planning and implementation, different techniques of DSM–time of day pricing and metering, multiutility power exchange model, load management, Load priority technique- direct load control technique, local load control technique, distributed load control technique.			
Self-study component:		Energy efficient technology in electrical system.	
UNIT – V	Load management		8 Hours
Peak clipping, load shifting, valley filling, strategic energy conservation, strategic load growth, flexible load shape, energy efficiency improvement, Different time zones, Tariff option for DSM-time of day tariff, seasonal tariff, curtailable tariff, End use energy conservation, customer acceptance of DSM, DSM implementation issues, DSM implementation strategies, Management and Organization of Energy Conservation awareness Programs- Plant level, Division level, corporate level.			
Self-study component:		Energy efficient lighting controls and Integrated energy policy	
Course Outcomes: On completion of this course, students are able to			
COs	Course Outcomes with <i>Action verbs</i> for the Course topics	Bloom’s Taxonomy Level	Level Indicator
CO1	Demonstrate comprehension of the fundamental principles and objectives of energy management and recognizing the significance of energy auditing.	Understand and Remember	L1, L2
CO2	Apply power factor correction techniques and demand side management strategies to optimize electrical systems	Apply	L3
CO3	Analyze the economic aspects of energy management, including conducting energy economic	Analyze	L4
Text Book(s): 1. “Fundamentals of Energy Engineering” - Albert Thumann, Prentice Hall Inc, Englewood Cliffs, New Jersey. 2. Electrical distribution – Pabla, TMH Publishers, 2004.			
Reference Book(s): 1. “Demand Side Management”-Jyothi Prakash, , TMH Publishers, 2000. 2. Hand book on energy auditing - TERI (Tata Energy Research) 3. Principles of Power system V.K. Mehtha, ,S.Chand& Company Ltd. 2002 4. Hand book of Electrical power Distribution, Gorti Ramamurthy, University press, 2 nd edition, 2009

Smart Grid			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – VII			
Course Code:	P22EE7032	Credits:	03
Teaching Hours/Week (L:T:P):	3:0:0	CIE Marks:	50
Total Number of Teaching Hours:	40	SEE Marks:	50
Course Learning Objectives: This course will enable the students to:			
<ul style="list-style-type: none">• Performance Analysis Tools for Smart Grid Design• Analysis Techniques for Steady-State Voltage Stability Studies• Computational Tools, Decision Support Tools, Optimization Techniques• Case Studies and Test beds for the Smart Grid			
UNIT – I	Introduction		8 Hours
Smart Grid Architectural Designs: Introduction, Today’s Grid versus the Smart Grid, Energy Independence and Security Act of 2007: Rationale for the Smart Grid, Computational Intelligence, Power System Enhancement, Communication and Standards, Environment and Economics, General View of the Smart Grid Market Drivers, Stakeholder Roles and Function, Working Definition of the Smart Grid Based on Performance Measures, Representative Architecture, Functions of Smart Grid Components. Smart Grid Communications and Measurement Technology: Communication and Measurement, Monitoring, PMU, Smart Meters, and Measurements Technologies, GIS and Google Mapping Tools, Multi agent Systems (MAS) Technology.			
Performance Analysis Tools for Smart Grid Design: Introduction to Load Flow Studies, Challenges to Load Flow in Smart Grid and Weaknesses of the Present Load Flow Methods, Load Flow State of the Art: Classical, Extended Formulations, and Algorithms, Congestion Management Effect, Load Flow for Smart Grid Design, DSOPF Application to the Smart Grid, Static Security Assessment (SSA) and Contingencies, Contingencies and Their Classification.			
Self-study component:		Microgrid and Smart Grid Comparison, Contingency Studies for the Smart Grid.	
UNIT – II	Stability Analysis Tools for Smart Grid		8 Hours
Introduction to Stability, Strengths and Weaknesses of Existing Voltage Stability Analysis Tools, Voltage Stability Assessment, Voltage Stability Assessment Techniques, Voltage Stability Indexing, Analysis Techniques for Steady-State Voltage Stability Studies, Application and Implementation Plan of Voltage Stability, Optimizing Stability Constraint through Preventive Control of Voltage Stability, Angle Stability.			
Self-study component:		Assessment, State Estimation.	
UNIT – III	Computational Tools for Smart Grid Design		8 Hours
Introduction to Computational Tools, Decision Support Tools, Optimization Techniques, Classical Optimization Method, Heuristic Optimization, Evolutionary Computational Techniques, Adaptive Dynamic Programming Techniques, Pareto Methods, Hybridizing Optimization Techniques and			

P.E.S. College of Engineering, Mandya
Department of Electrical & Electronics Engineering

Applications to the Smart Grid, Computational Challenges. Pathway for Designing Smart Grid: Introduction to Smart Grid Pathway Design, Barriers and Solutions to Smart Grid Development, Solution Pathways for Designing Smart Grid Using Advanced Optimization and Control Techniques for Selection Functions, General Level Automation, Bulk Power Systems Automation of the Smart Grid at Transmission Level, Distribution System Automation Requirement of the Power Grid, End User/Appliance Level of the Smart Grid.			
Self-study component:		Applications for Adaptive Control and Optimization	
UNIT – IV	Renewable Energy and Storage		8 Hours
Renewable Energy Resources, Sustainable Energy Options for the Smart Grid, Penetration and Variability Issues Associated with Sustainable Energy Technology, Demand Response Issues, Electric Vehicles and Plug-in Hybrids, PHEV Technology, Environmental Implications, Storage Technologies, Tax Credits. Interoperability, Standards, and Cyber Security: Introduction, Interoperability, Standards, Smart Grid Cyber Security.			
Self-study component:		Cyber Security and Possible Operation for Improving Methodology for Other Users.	
UNIT – V	Research, Education, and Training for the Smart Grid		8 Hours
Introduction, Research Areas for Smart Grid Development, Research Activities in the Smart Grid, Multidisciplinary Research Activities, Smart Grid Education, Training and Professional Development. Case Studies and Test beds for the Smart Grid: Introduction, Demonstration Projects, Advanced Metering, Microgrid with Renewable Energy, Power System Unit Commitment (UC) Problem, ADP for Optimal Network Reconfiguration in Distribution Automation, Case Study of RER Integration, Test beds and Benchmark Systems.			
Self-study component:		Challenges of Smart Transmission, Benefits of Smart Transmission	
Course Outcomes: On completion of this course, students are able to			
COs	Course Outcomes with <i>Action verbs</i> for the Course topics	Bloom’s Taxonomy Level	Level Indicator
CO1	Illustrate the fundamental principles and technologies underlying the Smart Grid.	Understand and Remember	L1, L2
CO2	Apply computational tools and optimization techniques to manage Smart Grid systems, for addressing challenges in renewable energy integration, demand response, and grid stability.	Apply	L3
CO3	Analyze the challenges, interoperability issues, and cyber security concerns associated with Smart Grid implementation.	Analyze	L4

HVDC Power Transmission			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – VII			
Course Code:	P22EE7033	Credits:	03
Teaching Hours/Week (L:T:P):	3:0:0	CIE Marks:	50
Total Number of Teaching Hours:	40	SEE Marks:	50
Course Learning Objectives: This course will enable the students to:			
<ul style="list-style-type: none">• Comparison of DC transmission with respect to AC transmission• Analysis of converters – assumptions, characteristics & Properties• Analysis of Gratez circuit (rectification & inversion)• To study the control strategies involved in DC Transmission• To know about the role of protection, harmonics & filters in DC transmission			
UNIT – I	General Aspects of DC Transmission and Comparison with AC Transmission		8 Hours
Historical sketch, Types of DC links, Comparison of AC and DC transmission, Description of DC transmission systems, Principal applications of DC transmission, Modern Trends in HVDC Technology, Planning for HVDC Transmission.			
Self-study component:		HVDC transmission based on VSC	
UNIT – II	Converter circuits		8 Hours
Valve characteristics, Properties of converter circuits, Assumptions, Single phase converters, Pulse number, Three phase converters; one way and two way (6 pulse)converters, Circuit of Twelve pulse cascade of two bridges with waveforms (Characteristics and analysis are excluded)			
Self-study component:		Additional six pulse converter circuits	
UNIT – III	Analysis of Three phase bridge converter		8 Hours
Analysis with grid control without overlap; current and phase relations, Analysis with grid control and overlap less than 60°; voltage reduction due to commutation overlap, Mode 1, Mode 2 and Mode 3 operation, Vd-Id Characteristics of Converter, Inversion.			
Self-study component:		Series and parallel arrangements of valves, anodes or bridges	
UNIT – IV	Control strategies		8 Hours
Basic means of control, Power reversal, Limitations of manual control, Constant voltage versus constant current control, desired features of control, Actual control characteristics, Constant minimum ignition angle control, Constant current control, Stability of control, MTDC systems (configurations only)			
Self-study component:		Constant extinction angle control, Tap changer control, power control and current limits	

P.E.S. College of Engineering, Mandya
Department of Electrical & Electronics Engineering

UNIT – V		Protection & Harmonics		8 Hours
Protection: General, Prevention of consequent commutation failures, Converter faults, DC Circuit breakers, Clearing line faults and re-energizing the line. Characteristic and Uncharacteristic harmonics, Telephone interference, Troubles caused by harmonics, Means of reducing harmonics, Harmonic filters.				
Self-study component:		DC reactors		
Course Outcomes: On completion of this course, students are able to:				
COs	Course Outcomes with <i>Action verbs</i> for the Course topics	Bloom’s Taxonomy Level	Level Indicator	
CO1	Illustrate the General Aspects of DC Transmission on par with AC transmission.	Remember & Understand	L1 &L2	
CO2	Apply the knowledge of transmission system to study the operation of different converts in HVDC transmission.	Applying	L3	
CO3	Analyze the performance characteristics of different converter circuits used in HVDC transmission.	Analyzing	L4

Artificial Neural Networks & Artificial Intelligence			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – VII			
Course Code:	P22EE7034	Credits:	03
Teaching Hours/Week (L:T:P):	3:0:0	CIE Marks:	50
Total Number of Teaching Hours:	40	SEE Marks:	50
Course Learning Objectives: This course will enable the students to: <ul style="list-style-type: none">Understand the different terminologies used in Artificial Neural Network.Study the different learning rules in ANN.Understand the architecture and algorithm of various neural networks.			
UNIT – I	Introduction		8 Hours
Human Brain, Biological Neuron networks –Artificial Neural networks (ANN). Comparison between ANN and Biological Neuron networks. Architectures- Feed forward and Feedback architecture. Supervised, Unsupervised and Reinforcement learning. ANN terminologies: Weights, Activation functions-Sigmoidal functions, Bias, Threshold.			
Fundamental models of ANN & Learning Processes:			
McCulloch-Pitts (MP) neuron model – Architecture (MP model on AND, OR, NOT and EXOR gates only). Learning rules: Hebbian learning rule, Perceptron Learning rules, delta Learning rules, Competitive learning, Boltzmann learning, Memory-based learning.			
Self-study component:		Generate AND, NOT function using MP neural net by MATLAB.	
UNIT – II	Architecture and Algorithms of ANN		8 Hours
Hebb net – architecture, algorithm (Excluding problems), Perceptron Networks-Single Layer Perceptron: Architecture, algorithm, Application procedure. Perceptron algorithm for several output classes (Excluding problems). Brief introduction to Multi-Layer Perceptron networks.			
Adaline and Madline networks- Adaline networks-Architecture, algorithm, Application procedure (Excluding problems) and Madline networks Architecture, algorithm, and Application procedure (Excluding problems).			
Self-study component:		Develop MATLAB program for AND & OR function by using perceptron and adaline net.	
UNIT – III	Feedback and Feed forward networks		8 Hours
Feedback networks: Discrete Hopfield Net –architecture, training algorithm, application algorithm, analysis. Continuous Hopfield Net. Bi-directional Associative Memory (BAM)(Excluding problems).Relation between BAM & Hopfield Net.			
Feed forward networks: Introduction, Back Propagation Network (BPN), - Generalized Delta learning rule (or) Back Propagation rule-Architecture, training algorithm, selection parameters, learning in Back Propagation (Excluding problems). Merits and Demerits of Back Propagation			

P.E.S. College of Engineering, Mandya
Department of Electrical & Electronics Engineering

Network (BPN), Applications. Radial-Basic Function Networks (RBFN):Architecture, Training algorithm for a RBFN (Excluding problems).			
Self-study component:		Develop a MATLAB program for approximating a two 2-dimensional functions using back propagation in batch mode.	
UNIT – IV	Self-organizing feature Map and ART		8 Hours
Self-organizing feature Map (SOM): Kohonen Self-organizing feature Map (SOM)- Architecture, training algorithm). Learning vector quantization (LVQ) - Architecture, training algorithm (Excluding problems).			
Adaptive Resonance Theory (ART): ART fundamentals, Basic architecture, Basic operation, Learning in ART. Basic training steps. ART1 - Architecture, training algorithms, ART2- Architecture and training algorithm (Excluding problems)			
Self-study component:		Applications of ART1 and ART2	
UNIT – V	Introduction to Artificial Intelligence		8 Hours
Artificial Intelligence, Goals of AI, AI Technique, Applications of AI, Types of Intelligence, Working of Speech and Voice Recognition Systems, AI - Agents & Environments, Agent Terminology, Types of Agents- Rational Agent, Simple and Model based Reflex Agents, Goal Based Agents, Utility Based Agents, Properties of Environment, different AI- Search Terminology (Meaning only).			
Artificial Intelligence – Robotics: Robotics, Robot Locomotion- Legged Locomotion, Wheeled Locomotion, Slip/Skid Locomotion, Components of a Robot, Applications of Robotic			
Self-study component:		Brute-Force Search Strategies, Informed (Heuristic) Search Strategies	
Course Outcomes: On completion of this course, students are able to			
COs	Course Outcomes with <i>Action verbs</i> for the Course topics	Bloom’s Taxonomy Level	Level Indicator
CO1	Illustrate the knowledge of allied engineering to analyze the different terminologies used in Artificial Neural Network and AI	Understand and Remember	L1, L2
CO2	Apply the knowledge of different learning rules to study the architecture of ANN and AI techniques.	Apply	L3
CO3	Analyze the architecture, algorithm of various neural networks and agents on AI.	Analyze	L4

High Voltage Engineering (Integrated)			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – VII			
Course Code:	P22EE704	Credits:	04
Teaching Hours/Week (L:T:P):	3:0:2	CIE Marks:	50
Total Number of Teaching Hours:	50	SEE Marks:	50
Course Learning Objectives: This course will enable the students to:			
<ul style="list-style-type: none">• Students will understand the Breakdown phenomenon in gaseous, solids and liquid Dielectrics.• Students will learn basic need to generate high voltages such as HVAC, HVDC, Impulse Voltages and Impulse Currents in the laboratory.• Students gain the fundamental knowledge of physical phenomena of breakdown in insulating media and students will know the importance of insulating media and their applications in various fields.• Students will learn how to measure the high voltages in the laboratory• Students will know importance of testing and learn procedure of testing different insulating media for accessing their condition			
UNIT – I	Introduction		8 Hours
Introduction: Introduction to HV technology, Need for generating high voltages in laboratory. Important applications of high voltage. Breakdown phenomena: Classification of HV insulating media. Gaseous dielectrics: Ionizations, primary and secondary ionization processes. Criteria for gaseous insulation breakdown - Townsend’s theory, limitations of Townsend’s theory, Streamer’s theory, Corona discharges,Paschen’s law and its significance, Time lags of Breakdown. Breakdown in solid dielectrics- Intrinsic breakdown, Thermal breakdown and Electro-mechanical breakdown. Breakdown of liquids dielectrics- Suspended particle theory, Cavity breakdown (bubble’s theory).			
Self-study component:		Breakdown in electro-negative gases	
Practical		a. Breakdown characteristics of liquid insulation	
UNIT – II	Generation of HVAC and HVDC Voltages		8 Hours
Generation of HVAC and HVDC Voltages: HVAC - HV transformer; Need for cascade connection and working of transformer units connected in cascade, Series resonant circuit, Tesla coil. HVDC - Cockcroft- Walton type high voltage DC set. Regulation, Ripple and Optimum number of stages.			
Self-study component:		Voltage doubler circuit	
Practical		b. Spark over characteristics of air insulation subjected to HVAC	

P.E.S. College of Engineering, Mandya
Department of Electrical & Electronics Engineering

		for uniform and non- uniform fields	
UNIT – III	Generation of Impulse Voltage and Current		8 Hours
Generation of Impulse Voltage and Current: Introduction to standard lightning and switching impulse voltages. Multistage impulse generator - working of Marx impulse generator, Rating of impulse generator, Components of multistage impulse generator, Triggering of impulse generat			
Self-study component:		Triggering of impulse generator by three electrode gap arrangement	
Practical		c. To determine 50% probability flashover voltage using impulse generator	
UNIT – IV	Measurement of High Voltages		8 Hours
Measurement of High Voltages: Electrostatic voltmeter - principle, construction and limitation; Chubb and Fortescue method for HVAC measurement, Generating voltmeter- Principle & Construction; Series resistance micro ammeter for HVDC measurements, Standard sphere gap measurements for HVAC, HVDC and Impulse voltages; Factors affecting the measurements: Potential dividers - Resistance dividers, Capacitance dividers.			
Self-study component:		Surge current measurement - Klydanograph and Magnetic link.	
Practical		d. Spark over characteristics of air insulation subjected to HVDC for uniform and non- uniform fields	
UNIT – V	Non-destructive Insulation Testing Techniques		8 Hours
Non-destructive Insulation Testing Techniques: Dielectric loss and loss angle measurements using Schering Bridge, Need for discharge detection, PD measurements – aspects, factors affecting the discharge detection; Discharge detection methods - Straight and Balanced methods.			
High Voltage Tests on Electrical Apparatus: Tests on Circuit breakers and Transformers.			
Self-study component:		Tests on Cables and Insulators	
Practical		e. Partial Discharge characteristics at low pressures using vacuum system and high pressure chamber.	
Course Outcomes: On completion of this course, students are able to			
COs	Course Outcomes with <i>Action verbs</i> for the Course topics	Bloom’s Taxonomy Level	Level Indicator
CO1	Illustrate the basic knowledge of electric laws and principles to study the Phenomena of Breakdown in different Dielectrics, generation and measuring of high voltage	Understand and Remember	L1, L2
CO2	Apply the knowledge of breakdown phenomenon of to study the HVAC, HVDC and impulse voltage generation processes	Apply	L3
CO3	Analyze voltage Tests on Electrical Apparatus and Non-destructive Insulation Testing Techniques	Analyze	L4

P.E.S. College of Engineering, Mandya
Department of Electrical & Electronics Engineering

CO4	Conduct experiments to analyze the operation of relays ,protection scheme for generator, HVAC and HVDC	Analyze	L4
Text Book(s): <ol style="list-style-type: none"> 1. High Voltage Engineering Fundamentals- E. Kuffel and W.S. Zaengl, Elsevier press, - 2ndEdition, 2005. 2. High Voltage Engineering- M.S.Naidu and Kamaraju, THM, - 3rdEdition,2007.

Research Methodology and IPR [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – VII			
Course Code:	P22RMI705	Credits:	03
Teaching Hours/Week (L:T:P):	3:0:0	CIE Marks:	50
Total Number of Teaching Hours:	40	SEE Marks:	50
Course Learning Objectives: This course will enable the students to: CO1. Gain comprehensive understanding of research methodology & IPR importance CO2. Create a framework for literature review and data sample collection CO3. Interpret and write research reports CO4. Understand the life cycle of IPR and its related legal aspects			
UNIT – I			8 Hours
Research Methodology: Introduction, Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Importance of Knowing How Research is Done, Research Process, Criteria of Good Research, and Problems Encountered by Researchers in India. Research Problem: Introduction, Selecting the Problem, Necessity of Defining the Problem, Technique Involved in Defining a Problem, An Illustration.			
Self-study component:	Case study to define research problem in the area of your interest.		
UNIT – II			8 Hours
Reviewing the literature: Place of the literature review in research, Bringing clarity and focus to research problem, Improving research methodology, Broadening knowledge base in research area, Enabling contextual findings, How to review the literature, searching the existing literature, reviewing the selected literature, Developing a theoretical framework, Developing a conceptual framework, Writing about the literature reviewed. Research Design: Meaning of Research Design, Need for Research Design, Features of a Good Design, Important Concepts Relating to Research Design, Different Research Designs, Basic Principles of Experimental Designs,.			
Self-study component:	Know about Important Experimental Designs		
UNIT – III			8 Hours
Design of Sampling: Introduction, Steps in Sample Design, Criteria of Selecting a Sampling Procedure, Characteristics of Good Sample Design. Measurement Technique: Introduction, Measurement Scales, Sources of Error in Measurement, Technique of Developing Measurement Tools. Data Collection: Collection of Primary Data, Difference between Questionnaires and Schedules, Collection of Secondary Data, Selection of Appropriate Method for Data Collection, Experiment and Survey.			
Self-study component:	Case Study on Method of data collection		
UNIT – IV			8 Hours
Interpretation and Report Writing: Meaning of Interpretation, Technique of Interpretation,			

P.E.S. College of Engineering, Mandya

Department of Electrical & Electronics Engineering

Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports.			
Intellectual Property: Introduction, Intellectual Property Regime in India, Copyrights, Trademarks, Patents, Designs, Trade Secrets, Geographical Indications and their Salient Features, Berne Convention, Paris Convention, Trade Related Aspects of Intellectual Property Rights (TRIPS) Agreement, Issues Covered under TRIPS Agreement, Features of the Agreement, Protection of Intellectual Property under TRIPS, Paris Convention for the Protection of Industrial Property, Berne Convention for the Protection of Literary and Artistic Works.			
Self-study component:		Patent Cooperation Treaty (PCT)	
UNIT – V			8 Hours
Indian Patent Law: Introduction, Concept of Patent, Product/Process Patents and Terminology, Patents Act 1970, Amendments to the Patent Act 1970, Patent Rules, Patentable Subject Matter and Patentability Criteria, Duration of Patents - Law and Policy Consideration, Elements of Patentability, Procedure for Filing Patent applications and Types of Applications.			
Self-study component:		Ownership and Maintenance of Patents	
Course Outcomes: On completion of this course, students are able to:			
COs	Course Outcomes with <i>Action verbs</i> for the Course topics	Bloom’s Taxonomy Level	Level Indicator
CO1	To know the meaning of Research Methodology and the technique of defining the Research Problem.	Understand	L2
CO2	Describe the framework of Literature Review, research design and report writing.	Understand	L2
CO3	Illustrate the Sampling Design and Data Collection and Procedure of Report Writing	Understand	L2
CO4	Understand the fundamentals of Intellectual Property, Patent and Drafting Procedure.	Understand	L2

Project Work Phase – I [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – VII			
Course Code:	P22EE706	Credits:	04
Teaching Hours/Week (L:T:P):	0:0:0	CIE Marks:	100
Total Number of Teaching Hours:	-	SEE Marks:	-
<p>Project Work: The Project Work (Phase I + Phase II) carries 12 credits (4 credits+8 credits) and spreads over TWO semesters, i.e. during 7th and 8th semesters.</p> <p>I. Project Phase – I and Project seminar Comprises of Literature Survey, Problem identification, Objectives and Methodology. CIE marks shall be based on the report covering Literature Survey, Problem identification, Objectives and Methodology and seminar presentation skill.</p> <p>II. The Assessment marks (CIE) in the case of Project Work - Phase I, shall be based on the evaluation at the end of the 7th semester by a committee consisting of Head of the concerned department, two senior faculty members of the department, one of them may be the internal guide. The work may be evaluated by the committee for award of Assessment marks (CIE) based on a Report [comprising of synopsis, Introduction, Literature survey, Objective and Methodology], presentation and viva voce.</p> <p>III. The project work shall be carried out by candidate(s) independently/in a group (maximum of four) during the seventh and eighth semester under the guidance of one of the faculty members of the Department of study. If the project work is of inter-disciplinary nature, a co-guide shall be taken from the same or any other relevant Department. If a project work has to be carried out in any industry / factory / organization, outside the campus, the permission for the same and the name of co-guide at any of these organizations shall be intimated to the authorities at the beginning of seventh semester by the Head of the Department.</p>

Self-Study Course			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – VIII			
Course Code:	P2EE801	Credits:	02
Total Number of Teaching Hours:	-	CIE Marks:	100
		SEE Marks:	-
<p>The student has to choose and study the course related to the program discipline with her / his own efforts under the guidance of Course Instructor / Project guide, using study materials available in Open Sources i.e., Massive Open Online Courses (MOOCs) – NPTEL Courses. The intention of the course is to encourage the habit of self-learning. In this regard, the department has to release the pool of courses from the list of available 8 weeks NPTEL online courses according to NPTEL calendar of events. The student has to register for the course from the available pool during VII / VIII Semester and the same will be reflected in the Grade Card of VIII Semester. The 100 marks CIE assessment is based on the final NPTEL score (i.e. Online assignments: 25% + Proctored exam: 75%). The NPTEL score will be mapped directly to the CIE marks as per the calculation below only if he /she has completed the NPTEL course (i.e. Certification).</p> <p>CIE = (NPTEL Score X 1.5) = [Maximum CIE should be 100 Marks]</p> <p>[Ex. – 1: If NPTEL Score is 52 then the CIE will be = 52 X 1.5 = 78]</p> <p>Ex. – 2: If NPTEL Score is 80 then the CIE will be = 80 X 1.5 = 100 (Subjected to a Maximum CIE Marks of 100)]</p> <p>If the student fails to complete the NPTEL course at the end of the VIII Semester, then the department has to constitute a committee consisting of the Head of the department, two senior faculty members of the department, one of them may be the internal guide. The evaluation is based on a Report, Presentation, and Viva-Voce of the NPTEL chosen topic and the assessment is a relative evaluation in context to the student's completed NPTEL course Certification (i.e. the CIE Score should be less than the score of the student who cleared the NPTEL Course).</p> <p>Note: The student who fails to enroll and appear for the proctored exam in NPTEL is considered to have failed.</p>

Research / Industry Internship - III

[As per Choice Based Credit System (CBCS) & OBE Scheme]

SEMESTER – VIII

Course Code:	P22INT802	Credits:	06
Teaching Hours/Week (L:T:P):	0:0:0	CIE Marks:	-
Total Number of Teaching Hours:	-	SEE Marks:	100

Guidelines for Internship:

- I.** Internship is of minimum Fifteen weeks duration and to be completed between the vacation period of VI & VII semester and VII & VIII semester.
- II.** The internship can be carried out in any industry/ R & D Organization/ Research/ Institute/ Educational institute of repute/ Internshala (ACITE MoU Internship).
- III.** The Department/college shall nominate staff member/s to facilitate, guide and supervise students under internship.
- IV.** The Internal Guide has to visit place of internship at least once during the student's internship.
- V.** The students shall report the progress of the internship to the guide in regular intervals and seek his/her advice.
- VI.** After the completion of Internship, students shall submit a report with completion and attendance certificates to the Head of the Department with the approval of both internal and external guides.
- VII.** There will be 100 marks for Viva Voce conducted during Semester End Examination (SEE) of VIII Semester. For the conduction of Internship Semester End Examination following instructions are issued:
 - a. The Semester End Examination (SEE) for 100 marks shall be conducted similar to final semester project work / lab examination.
 - b. Internal & External Examiners shall be appointed by the BoE – Chairperson in consultation with HoD and approval of the same by the Principal & Controller of Examination.
 - c. External Examiner may be from the Industry. If the external examiner from the industry is not available, alternative arrangement shall be made by the BoE - Chairperson by appointing a faculty from out of the available faculty in the department, wherein the student is studying.
- VIII.** The students are permitted to carry out the internship anywhere in India or abroad. The Institution will not provide any kind of financial assistance to any student for carrying out the Internship.
- IX.** Failing to undergo Internship: Internship is one of the head for obtaining degree, therefore completion of internship is mandatory.

Project Work Phase – II [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – VIII			
Course Code:	P22EE803	Credits:	08
Teaching Hours/Week (L:T:P):	0:0:0	CIE Marks:	100
Total Number of Teaching Hours:	-	SEE Marks:	100
<p>Project Work: The Project Work (Phase I + Phase II) carries 12 credits (4 credits+8 credits) and spreads over TWO semesters, i.e. during 7th and 8th semesters.</p> <ol style="list-style-type: none">I. Project Phase – I and Project seminar Comprises of Literature Survey, Problem identification, Objectives and Methodology. CIE marks shall be based on the report covering Literature Survey, Problem identification, Objectives and Methodology and seminar presentation skill.II. The Assessment marks (CIE) in the case of Project Work - Phase I, shall be based on the evaluation at the end of the 7th semester by a committee consisting of Head of the concerned department, two senior faculty members of the department, one of them may be the internal guide. The work may be evaluated by the committee for award of Assessment marks (CIE) based on a Report [comprising of synopsis, Introduction, Literature survey, Objective and Methodology], presentation and viva voce.III. The project work shall be carried out by candidate(s) independently/in a group (maximum of four) during the seventh and eighth semester under the guidance of one of the faculty members of the Department of study. If the project work is of inter-disciplinary nature, a co-guide shall be taken from the same or any other relevant Department. If a project work has to be carried out in any industry / factory / organization, outside the campus, the permission for the same and the name of co-guide at any of these organizations shall be intimated to the authorities at the beginning of seventh semester by the Head of the Department.IV. The weekly progress of the Project work shall be monitored and reviewed by the Project Guide assigned by DUGC. The method of evaluation, including intermediate assessment shall be evolved by the pertinent DUGC.V. A candidate shall submit N+3 (No. of candidates+3) copies of the Report of the Project Work to Head, DUGC on or before the specified date. The report shall be in the format prescribed by the Institute. The candidate shall submit a report of the project work (dissertation) duly approved by the guide and co-guide. The project report shall be countersigned by the guide, co-guide (if any) and the Head of the DepartmentVI. The last date for the submission of Report shall be Two weeks before the closure of the semester in which the project work credits have been registered for and is expected to be completed or as announced by the COE. The date of submission of the dissertation may be extended up to a maximum of eight academic years, from the date of commencement of the first semester in which the candidate has taken admission to the course.VII. The final evaluation (CIE & SEE) for Project Work - Phase II is done by a Project Work Evaluation Committee (PWEC) constituted by the pertinent DUGC. There shall be an open seminar followed by a viva – voce examination as part of the final evaluation. After the final evaluation, appropriate letter grade is awarded.			

- VIII. If in the opinion of the PWEC, the Project Report is acceptable with minor modifications for the minimum passing grade 'E' (Fair) in the case of project, the PWEC shall value and instruct the candidate suitably to incorporate the necessary modifications and to resubmit it to the Chairman, PWEC. After such resubmission, the Chairman, PWEC will certify that the necessary modification has been incorporated.
- IX. The Assessment marks in case of Project Work - Phase II and seminar shall be based on the evaluation, as per the guidelines, at the end of the 8th semester by a committee consisting of Head of the concerned department, two senior faculty members of the department (one of them may be the internal guide).
- X. The Assessment marks sheet shall bear the signature of all those concerned, along with the date and seal of the Principal.
