Department of Civil Engineering

PES College of Engineering

VISION

PESCE shall be a leading institution imparting quality engineering and management education,

developing creative and socially responsible professionals

MISSION

- Provide state of the art infrastructure, motivate the faculty to be proficient in their field of specialization and adopt best teaching -learning practices
- Impart engineering and managerial skills through competent and committed faculty using Outcome Based Educational curriculum
- Inculcate professional ethics, leadership qualities and entrepreneurial skills to meet the societal needs
- Promote research, product development and industry-institution interaction.

QUALITY POLICY

Highly committed in providing quality, concurrent technical education and continuously striving to meet expectations of stake holders.

CORE VALUES

Professionalism Empathy Synergy Commitment Ethics

Department of Civil Engineering

DEPARTMENT OF CIVIL ENGINEERING (Accredited by National Board of Accreditation)

VISION

To attain Excellence in imparting quality civil engineering education to meet the societal needs.

MISSION

- 1. Impart civil engineering and managerial skills with state of art infrastructure, competent and committed faculty using outcome based educational curriculum.
- 2. Promote research, project management and consultancy.
- 3. Inculcate professional ethics, leadership qualities and entrepreneurial skills to meet• the societal needs.

Programme Education Objectives (PEOs)

Graduates will be able to

- 1. Apply technical competence in the field of Civil Engineering with a strong background in basic science and mathematics.
- 2. Analyse and interpret data to design or evaluate civil engineering systems to satisfy societal needs with the use of modern tools including higher education.
- 3. Function effectively as an individual and or to work in a team on multispecialized Civil Engineering projects with professional ethics and effective communication skills inculcating the habit of life-long learning.

Programme Specific Outcomes (PSOs)

The Program Specific Outcomes have been derived from the PSC's defined by ASCE. By the time of graduation, Civil Engineering students will be able to:

PSO1: Apply knowledge of basic science to analyze and solve problems in the core area of Civil Engineering such as Structural, Geotechnical, Transportation, Environmental, Hydraulics and Water resources engineering.

PSO2: Analyze, Plan, design, quality assessment and cost estimate of Civil Engineering structures with professional ethics.

PSO3: Work in a consulting organization or can be an entrepreneur to investigate and supervise Civil Engineering structures using modern tools and technology to provide sustainable solutions to meet the societal needs.

P.E.S. College of Engineering, Mandya

Department of Civil Engineering

UNIT – III		Pavement Materials and Construction	10 Hours					
		iii. Angularity Number						
		ii. Elongation Index						
	i. Flakiness Index							
		e) Shape Tests (IRC and MoRTH guidelines)						
		d) Specific Gravity and Water Absorption Test						

Pavement Materials: Sub grade: desirable properties, HRB soil classification, determination of CBR and modulus of sub grade reaction with Problems. Aggregates: Desirable properties and requirements. Bituminous Binders & Mixes: Types, desirable properties and requirements. Pavement Quality concrete: Materials, Requirements.

Pavement Construction: General features, Embankment and Subgrade, Construction of Flexible pavements: Bituminous concrete, Dense Bituminous Macadam, Construction of CC pavement: Dry Lean Concrete. PQC

Self-study con	nponent: Design of joints in CC pavement.	
Practical Topi	ics:Tests on Paving Bitumen: a) Penetration Test b) Ductility Test c) Viscosity Test (Brooke field viscometer) d) Softening Point Test e) Specific Gravity Test f) Flash and Fire Point Test	
UNIT – IV	Highway Drainage and Economics	10 Hours

Highway Drainage: Significance and requirements, Surface drainage system and Design-Examples, sub surface drainage system, design of filter materials, Types of cross drainage structures, their choice and location.

Highway Economics: Highway user benefits, VOC using charts only-Examples, Economic analysis: annual cost method, Benefit Cost Ratio method, NPV, IRR methods - Examples, Highway financing-BOT-BOOT concepts.

Self-study component:Road construction in water-logged areas.							
Practical To	pics:	Tests on Paving Bitumen:					
a) Bituminous mix design (Marshall method) - Demonstration only							
b) Flexural strength of PQC - Demonstration only							
UNIT – V Traffic, Railways and Airport Engineering 10 Hour							

Elements of Traffic Engineering: Scope and objectives, traffic characteristics, Objectives and methods of traffic engineering studies: volume, O-D, accident surveys, traffic regulation and control.

Elements of Railways: Railways: Introduction, classification of routes; railway gauge, coning of wheels, track components: rails, sleepers, fastenings, ballast and formation.

Airports: Introduction, Layout of an airport with component parts and functions of each, Aircraft Characteristics – Airport Classifications, - Site selection- regional Planning. Orientation of runway by

using	wind rose diagram w	ith examples.		
Self-st	tudy component:	Track resistance.		
Practi	cal Topics:	Tests on Subgrade Soil: a) Compaction Test (Standard and Mo b) California Bearing Ratio Test c) Wet sieve analysis	dified)	
Cours	e Outcomes: On con	mpletion of this course, students are abl	e to:

Self-study component:	Painting and	l Varnish.									
UNIT – III	Buildi	ng Planning and Mainte	nance	8 Hours							
Plan, section and elevation building By-Laws, orient introduction, brick mason concrete, deterioration of r	tation of bui ary, stone ma	ldings, ventilation, acou asonry and R.C.C. Bui	stic requirements, Sup lding maintenance Det	er structure: erioration of							
Self-study component:	Anti-termite	treatment in building									
UNIT – IV		Interior Design		8 Hours							
Functional requirement of interior designer, basic elements of interior design, design problems :Interior design for spacious rooms, comfortable rooms, theme rooms, living area, cooking area, drinking area dining area, home offices, sleeping area.											
Self-study component:	Interior desi	gn for bathrooms, public/	private buildings								
UNIT – V	·	Landscaping		8 Hours							
Elements of Landscape	architecture,	specialization in landsc	ape, landscape product	s, landscape							

material	s, design guideline	s for interior landscape.								
Self-stu	dy component:	Water efficient landscaping.								
Course (Dutcomes: On com	pletion of this course, students are able to:								
COs	Course Outcome	es with Action verbs for the Course topics	Bloom's Taxonomy Level	Level Indicator						
CO1	•	wledge of engineering fundamentals to characteristics of basic civil engineering PSO1)	Applying	L3						
CO2	Apply the knowledge of engineering fundamentals and analyze the types of foundation. (PO2,PSO2)ApplyingL3									
CO3	Develop plan, section and apply bylaws and investigate causes and remedies for cracks, have an insight to cost effective construction. (PO1,PO2,PSO2)									
CO4	Develop the interdesign guidelines	riors and landscaping for buildings as per . (PO1,PO3)	Analyzing	L4

			SEMESTER – V								
Course Code:			P21CVO5053	Credits:	03						
Teaching Hour	s/Week (l	L :T:P):	3:0:0	CIE Marks:	50						
Total Number of	of Teachi	ng Hours:	40	SEE Marks:	50						
Course Learnin	ng Object	ives: This cou	rse will enable the stu	idents to:							
• The stud	ent acquir	es the knowle	dge on the Geotechni	cal engineering problems as	sociated with						
soil cont	amination	, safe disposa	l of waste and reme	diate the contaminated soil	s by different						
techniques thereby protecting environment.											
• Identify t	he contam	inated soil and	d source contamination	on.							
• Study on	Ground w	ater contamin	ation.								
Relation I	between c	ontamination	source and the soil &	water.							
UNIT – I		Introduction	to Geo-Environmer	ntal Engineering	8 Hours						
Fundamentals:	Introduct	ion to Geo env	vironmental engineeri	ing, Scope of environmental	geotechnical						
engineering - m	ultiphase	behavior of s	soil - role of soil in	geo-environmental and its	applications,						
Sources of subsu	urface Cor	ntamination, P	roduction and classifi	ication of ground contamina	tion – Causes						
of soil pollution	- impact	of ground con	tamination on geo-en	vironment - Failures of four	ndation due to						
waste movemen	t.										
Self-study comp	ponent:	Environmenta	l cycle - CNS, imp	ortance of soil physics, so	oil chemistry,						
		hydrogeology	and biological proces	SS							
UNIT – II		Interact	tion of Soil-water-co	ntaminants	8 Hours						
Soil Mineralogy	y: Clay m	ineralogy; ide	ntification of clay mi	nerals by X-ray diffraction	method; Soil-						
water-contamina between soil par		ctions and its	implications, concep	ots of double layer-forces	of interaction						
-		ents of unsatu	rated soil – importar	nce of unsaturated soil in e	nvironmental						
		1	-	nd measurement of soil suct							
		-	_								
Self-study com		Factors effect unsaturated zo	•	ention, water flow in s	aturated and						
UNIT – III		W	aste Containment S	ystem	8 Hours						
Waste Containment system: Evolution of waste containment facilities and disposal practices, Site selection based on environmental impact assessment (EIA), Concept and Principles of waste containment, Landfills, Types of landfills, Requirement of barrier materials, Liners for landfills, Landfill Covers, Generation and Control of Leachate and Gas from Landfills, different role of soil in waste containment.											
Self-study com	ponent:	Stability issu	es of waste contain	ment component systems	and property						
· · · · · · · · · · · · · · · · · · ·		•		pility for waste containment.							
UNIT – IV			ransport of Contami	-	8 Hours						
Transport of	Contami			sub surface – Advectio	n. Diffusion						
mansport of	Jonunn	Conta	minune transport m	sub surrace Auveeno							

-	•	equations, Contaminant transformation, S Hydrological consideration in land fill design,								
Self-stu	dy component:	Different method of soil containment waste	stabilization							
UNIT	T – V Remediation of Contaminated Soils									
Remediation: Need and objectives of site remediation, Site characterization method for remediation and various risk assessment of contaminated site, remediation methods for soil and remediation methods for soil with groundwater- various active and passive methods, selection of suitable remediation method and planning of remediation methods.										
Self-study component: Various In-situ remediation techniques, its characterizations and application										
Course	Outcomes: On o	completion of this course, students are able to:								
COs	Course Outcomes with Action verbs for the Course topics Bloom's Taxonomy Level Level									
C01	Understand the water. (PO1, P	L2								
CO2	Understand the contaminants. (Understanding	L2							
CO3	Analyze and identify the source for contamination in soils and water and select suitable disposal system and transportation methods for particular waste. (PO2, PO5, PSO2)AnalyzingL4									
CO4	Apply the suit soils. (PO1, PS	L3

Guideline for Assessment Process:

Continuous Internal Evaluation (CIE) :

After completion of the social connect and responsibility course, the student shall prepare, with daily diary/ report as reference and a comprehensive report in consultation with the faculty/mentor to indicate what he has observed and learned in the social connect period. The report shall be evaluated on the basis of the following below criteria's or other relevant criteria pertaining to the activity completed.

- Planning and scheduling the social connect.
- Information/Data collected during the social connect.
- Analysis of the information/data and report writing.
- Presentation and interaction.

<u>CIE Rubrics for Evaluation.</u>

Report	Video presentation	Interaction	Total
10	05	05	20

Note:

- Video presentation of **4 to 5 min** in a team to be presented and the same to be uploaded in the department YouTube channel.
- The number of students in each team can be from **4 to 5** members.
- Each activities has to be evaluated on above basis that is [20 * 5 = 100 marks] for final total marks.

Duration : A total of 25 - 30 hours engagement per semester is required for the 5th semester of the B.E./B.Tech. program. The students will be divided into groups and each group will be handled by faculty mentor.

Pedagogy – Guidelines:

Special Note: NO SEE – Semester End Exam – Completely Practical and activities based evaluation

It may differ depending on local resources available for the study as well as environment and climatic differences, location and time of execution.

Sl No	Topic	Group size	Location	Activity execution	Reporting	Evaluation Of the Topic
1.	Plantatio n and adoption of a tree:	May be individu al or team	Farmers land/ parks / Villages / roadside/ community area / College campus etc	Site selection /proper consultation/Conti nuous monitoring/ Information board	Report should be submitted by individual to the concerned evaluation authority	Evaluation as per the rubrics Of scheme and syllabus by Faculty

Teaching Hours/Week (L	:T:P):	3: 0:0	CIE Marks:	50
Total Number of Teachin	g Hours:	40	SEE Marks:	50
Course Learning Objecti	ves: This course	will enable the students to:		
• Understand, anal	yse and design	reinforced concrete grid floors	5	
• Understand, anal	yse and design	reinforced concrete flat slabs		
• Understand, anal	yse and design	reinforced circular overhead w	ater tank	
• Understand, anal	yze and design	reinforced concrete Silo		
• Understand, anal	yze and design	reinforced concrete retaining	wall	
UNIT – I		Design of grid floors		08 Hours
, U		s of the slabs for moment and	shears by Rankine's	method and
Design of floors using ap	1			
Self-study component:		compare the grid floor with cort, and submit the same.	onventional beam sla	ab systems,
UNIT – II		Design of flat slabs		08 Hours
Limitations of Direct de Shear in Flat slabs. Desig	esign method, gn of flat slab (i	b, design strips, analysis of f Distribution of moments in nterior panel) with and withou visit construction sites or bui	column strips and n at drop.	niddle strip-
Self-study component:		ort, and submit the same. Deta	• •	
UNIT – III	Design of R	CC overhead circular water	tanks	08 Hours
Introduction, design red	uirements as	per IS: 3370, components of	of circular elevated	water tank,
analysis and design of to	p dome, top rin	g beam, side walls of water ta	nk and bottom slab.	
Self-study component:	Analysis of t	oottom ring beam and Foundat	ions details.	
UNIT – IV		Design of silos		08 Hours
•		ads, analysis of bins using Jan th circular cross sections using	•	iry's theory-
Self-study component:		l compare the horizontal press, prepare a report, and submit	e	s theory and
UNIT – V	Ι	Design of Retaining walls		08 Hours
Introduction, types of Cantilever Retaining Wa	-	, design principles of canti	lever retaining wall	, design of
Self-study component:	Design of Co	unter Fort Retaining Wall.		
Course Outcomes: On co	mpletion of this	s course, students are able to:		

P.E.S. College of Engineering, Mandya

Department of Civil Engineering

COs	Course Outcomes with <i>Action verbs</i> for the course topics	Bloom's Taxonomy Level	Level Indicator
CO1	Analyze and Design grid floor (PO3, PO6, PO7,PO8, PO12, PSO1,PSO2, PSO3)	Creating	L6
CO2	Analyze and Design flat slab (PO3, PO6, PO7, PO8, PO12, PSO1, PSO2, PSO3)	Creating	L6
CO3	Analyze and Design water tank components(PO3, PO6, PO7,PO8, PO12, PSO1,PSO2, PSO3)	Creating	L6
CO4	Analyze and Design silos(PO3, PO6, PO7,PO8, PO12, PSO1,PSO2, PSO3)	Creating	L6
CO5	Analyze and Design retaining walls(PO3, PO6, PO7,PO8, PO12, PSO1,PSO2, PSO3)	Creating	L6

P.E.S. College of Engineering, Mandya

Department of Civil Engineering

UNIT – III	Flow	of Water through Soils and Compaction of Soils	10 Hours				
Flow of Water through soils: Darcy's law- assumption and validity, coefficient of permeability and its determination (laboratory tests), factors affecting permeability, permeability of stratified soils Seepage velocity, superficial velocity and coefficient of percolation.							
-	actors affect	Definition, Principle of compaction, Standard and M ing compaction, Effect of compaction on soil properties e.					
Self-study co	nponent:	Determination of coefficient of permeability by field me equipment's.	thod, Compacting				
Practical Top	ics:	1. Determination of Coefficient of Permeability and Constant head and Falling head method.	d Percolation by				
		2. Determination of MDD and OMC of soil sample by compaction method.	Light and heavy				
		3. Demonstration on standard penetration test (SPT).					
UNIT – IV	Co	nsolidation of Soils and Foundation Settlement	10 Hours				
over consolidation Consolidation theory (Assur- consolidation time fitting me	ated soils, p characterist nptions and characteristi ethod, logarit	Definition, spring analogy for normally consolidated, under ore-consolidation pressure and its determination by- Casa ics of soil (Cc, av, mv and Cv), Terzaghi's one-Dimension I limitations only) Laboratory 1-D consolidation test cs of soil, determination of coefficient of consolidation test thmic time fitting method.	grande's method onal consolidation to determine the by square root of				
		blidation and secondary settlements (no derivations).	ion of settlement,				
Self-study co	-	Determination of pre consolidation pressure by Log-	-				
Practical Top	ics:	 Determination of free swell index of clayey soil. Determination of Field density of soil by Core cutter and Sand Replacement method. Demonstration of Consolidometer. 					

UNIT – V	
----------	--

10 Hours

Shear Strength of Soils: Concept of shear strength, Mohr's-coulomb theory, conventional and modified failure envelopes, Total and effective shear strength parameters, Laboratory determination of shear strength of soils – Direct shear test, Tri-axial compression test, Unconfined compression test and vane shear test, Test under different drainage conditions.

Shear Strength and Safe Bearing Capacity of Soils

Safe Bearing Capacity of Soils: Definitions of ultimate, net and safe bearing capacities, Allowable bearing pressure. Terzaghi's bearing capacity equation.

Self-s	tudy component:	Concept of pore pressure, factors affecting	g shear strength o	f soils.					
Pract	ical Topics:	1. Determination of Shear strength parameters of soil by Direct shear test.							
		 Determination of Shear strength parameters of soil by UCS Test. 							
		3. Determination of Shear strength Test	parameters of so	oil by vane shear					
Cours	se Outcomes: On c	completion of this course, students are able	to:

HIGHWAY TRAFFIC AND SAFETY MEASURES									
	[A	s per Choice Bas	ed Credit System (CBCS) SEMESTER – VI	& OBE Scheme]					
Course Code:			P21CVO6052	Credits:	03				
Teaching Hour	s/Week (L	:T:P):	3:0:0	CIE Marks:	50				
Total Number	of Teaching	g Hours:	40	SEE Marks:	50				
Course Learnin	ng Objectiv	ves: This course	will enable the students to:	:					
• Underst	tand the kr	nowledge of var	rious traffic characteristi	cs.					
• Underst	tand the in	nportance of tra	iffic studies and design of	of parking facilities.					
• Underst	tand the in	nportance of ac	cident studies in the pres	sent scenario.					
• Underst	tand the in	nportance of tra	iffic regulation and contr	col.					
• Underst	tand the ba	asic concept of	various types of traffic in	ntersection and its design.	1				
UNIT – I			Traffic Characteristics	8	8 Hours				
Traffic Chara vehicular chara	Traffic Characteristics: Road user characteristics – human factors including reaction time and vehicular characteristics affecting road design and traffic flow, resistance to the motion of vehicles – Reaction time of driver –Numerical Problems.								
Self-study com	ponent:	PCU concept	for mixed traffic condition	on.	T				
UNIT – II			Traffic Studies		8 Hours				
studies, runnin	g speed an	nd journey spee	ed studies, origin and de	fied traffic volume, spot estination surveys. Design levices and different typ	of on-street				
Self-study com	ponent:	Bus bays, Des	sign features of expressw	/ays.					
UNIT – III			Accident Studies		8 Hours				
analysis, Num	erical Pro	blems. Road sa	afety issues, various me	ysis of individual acciden easures for road safety - erm measures. Road safe	engineering,				
Self-study com	ponent:	Cost of road	accidents.						
UNIT – IV		Tra	ffic Regulation and Co	ntrol	8 Hours				
U		U		vers and traffic flow, Tr lineators, one-way streets.					
Self-study com	ponent:	Roadside furn	iture's						
UNIT – V			Traffic Intersection		8 Hours				
of At-grade In	tersection	s – Channeliza	tion, Objectives; Rotary	gn Principles for Intersect Intersection – Concept, ants and Design standards	Advantages				
Self-study component: Traffic Islands and Design standards									

Department of Civil Engineering

Course	Course Outcomes: On completion of this course, students are able to:									
COs	Course Outcomes with Action verbs for the Course topics	Bloom's Taxonomy Level	Level Indicator							
CO1	<i>Apply</i> the knowledge of engineering fundamentals for understanding various road user and vehicular characteristics. (PO1, PSO1)	Applying	L3							
CO2	<i>Compare</i> traffic stream characteristics and understand the elements of highway safety and approaches to accident studies. (PO3 , PSO3)	Analyzing	L4							
CO3	<i>Interpret</i> the concept of traffic regulations and traffic control devices. (PO4, PSO2)	Evaluating	L5							
CO4	<i>Test for</i> various traffic studies and design of different highway components. (PO3, PSO2)	Analyzing	L4

Mini - Project [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – VI						
Course Code:	P21CVMP607	Credits:	02			
Teaching Hours/Week (L:T:P)	0:0:2	CIE Marks:	50			
Total Number of Teaching Hours:	26	SEE Marks:	50			

Based on the ability/abilities of the student/s and recommendations of the mentor, a single discipline or a multidisciplinary Mini- project can be assigned to an individual student or to a group having not more than 4 students. (or Mini Project is a laboratory-oriented course which will provide a platform to students to enhance their practical knowledge and skills by the development of small systems/applications)

CIE procedure for Mini-project:

(i) Single discipline: The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide. The CIE marks awarded for the Mini-project work shall be based on the evaluation of project report, project presentation skill, and question and answer session in the ratio of 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.

(ii) **Interdisciplinary**: CIE shall be group-wise at the college level with the participation of all the guides of the college through Dean (III). The CIE marks awarded for the Mini-project, shall be based on the evaluation of project report, project presentation skill and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.

SEE for Mini-project:

- **Single discipline**: Contribution to the Mini-project and the performance of each group member shall be assessed individually in the semester end examination (SEE) conducted at the department through Viva-Voce examination.
- **Interdisciplinary**: Contribution to the Mini-project and the performance of each group member shall be assessed individually in semester end examination (SEE) through Viva-Voce examination conducted separately at the departments to which the student/s belongs to.

Universal Human Values and Professional Ethics								
[As per Choice Based Credit System (CBCS) & OBE Scheme]								
SEMESTER – VI								
Course Code:	P21UHV609	Credits:	01					
Teaching Hours/Week (L:T:P):	1:0:0 CIE Marks:		50					
Total Number of Teaching Hours:	25 + 5	SEE Marks:	50					

Course objectives:

This course is intended to:

- 1. To help the students appreciate the essential complementarity between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity which are the core aspirations of all human beings.
- 2. To facilitate the development of a Holistic perspective among students towards life and profession as well as towards happiness and prosperity based on a correct understanding of the Human reality and the rest of existence. Such a holistic perspective forms the basis of Universal Human Values and movement towards value-based living in a natural way.
- 3. To highlight plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behaviour and mutually enriching interaction with Nature.
- 4. This course is intended to provide a much-needed orientation input in value education to the young enquiring minds.

Teaching-Learning Process (General Instructions)

These are sample Strategies, which teachers can use to accelerate the attainment of the various course outcomes.

- 1. The methodology of this course is explorational and thus universally adaptable. It involves a systematic and rational study of the human being vis-à-vis the rest of existence.
- 2. In addition to the traditional lecture method, different types of innovative teaching methods may be adopted so that the activities will develop students' theoretical and applied skills.
- 3. State the need for UHV activities and its present relevance in the society and Provide reallife examples.
- 4. Support and guide the students for self-study activities.
- 5. You will also be responsible for assigning homework, grading assignments and quizzes, and documenting students' progress in real activities in the field.
- 6. This process of self-exploration takes the form of a dialogue between the teacher and the students to begin with, and then to continue within the student in every activity, leading to continuous selfevolution.
- 7. Encourage the students for group work to improve their creative and analytical skills.

Module - 1

Introduction to Value Education(3 hours)Right Understanding, Relationship and Physical Facility (Holistic Development and the Role of
Education) Understanding Value Education, Self-exploration as the Process for Value
Education, Continuous Happiness and Prosperity – the Basic Human Aspirations, Happiness
and Prosperity – Current Scenario, Method to Fulfil the Basic Human Aspirations

P.E.S. College of Engineering, Mandya

Department of Civil Engineering

Harmony in the Human Being :

Understanding Human being as the Co-existence of the Self and the Body, Distinguishing between the Needs of the Self and the Body, The Body as an Instrument of the Self, Understanding Harmony in the Self, Harmony of the Self with the Body, Programme to ensure self-regulation and Health

Implications of the Holistic Understanding – a Look at Professional Ethics : (3 hours) Natural Acceptance of Human Values, Definitiveness of (Ethical) Human Conduct, A Basis for Humanistic Education, Humanistic Constitution and Universal Human Order, Competence in Professional Ethics Holistic Technologies, Production Systems and Management Models-Typical Case Studies, Strategies for Transition towards Value-based Life and Profession

Course outcome (Course Skill Set)

At the end of the course, students are expected to become more aware of themselves, and their surroundings (family, society, nature);

- They would become more responsible in life, and in handling problems with sustainable solutions, while keeping human relationships and human nature in mind.
- They would have better critical ability.
- They would also become sensitive to their commitment towards what they have understood (human values, human relationship and human society).
- It is hoped that they would be able to apply what they have learnt to their own self in different day-to-day settings in real life, at least a beginning would be made in this direction.

Expected to positively impact common graduate attributes like:

- 1. Ethical human conduct
- 2. Socially responsible behaviour
- 3. Holistic vision of life
- 4. Environmentally responsible work
- 5. Having Competence and Capabilities for Maintaining Health and Hygiene
- 6. Appreciation and aspiration for excellence (merit) and gratitude for all

(3 hours)

(3 hours)

(3 hours)
